Supporting Information

# Direct Synthesis of Hexitols from Microcrystalline Cellulose and Birch over Zirconium (IV)

# Phosphate Supported Nickel Catalysts and the Mechanism Study

| Catalyst | Bronsted site   | Lewis site | Ref. |
|----------|---|------------|------|
| ZrP      | 0,00,00<br>H0 <sup>°</sup> O,0 <sup>°</sup> O,0 <sup>°</sup> Zr <sup>°</sup> O<br>H0 <sup>°</sup> O,0 <sup>°</sup> Zr <sup>°</sup> O<br>H0 <sup>°</sup> O,0 <sup>°</sup> Zr <sup>°</sup> O<br>0 <sup>°</sup> O,0 <sup>°</sup> C | Zr         | 1    |

**Table S1.** The structure of Bronsted and Lewis acid site of ZrP.

**Table S2.** The NH<sub>3</sub> desorption peaks area of screened catalysts.

| Catalyst              | $\rm NH_3$ desorption area |
|-----------------------|----------------------------|
| Ni/CeP                | 4.8042                     |
| Ni/TiP                | 4.9208                     |
| Ni/ZrP <sub>0.5</sub> | 7.6843                     |
| Ni/ZrP <sub>1</sub>   | 8.2315                     |
| Ni/ZrP <sub>1.5</sub> | 9.5051                     |
| Ni/ZrP <sub>2</sub>   | 15.2321                    |
| Ni/ZrP <sub>3</sub>   | 10.9141                    |
|                       |                            |

### Table S3. Metal contents of Ni/ZrP<sub>2</sub> before and after recycle.

|                                  | Content (wt%) |  |
|----------------------------------|---------------|--|
|                                  | Ni            |  |
| Ni/ZrP <sub>2</sub>              | 19.48         |  |
| Ni/ZrP <sub>2</sub> after 3 runs | 14.30         |  |

#### Table S4. Metal contents of the solution after reaction.<sup>a</sup>

|                | Content (ug/ml) |        |      |
|----------------|-----------------|--------|------|
|                | Ni              | Zr     | Ρ    |
| Solution after | 78.99           | None f | None |
| reaction       | 76.55           |        | Mone |

a: The volume of the reaction solution is 10 ml.

| Entry   | C (%) | H (%) | N (%) |
|---------|-------|-------|-------|
| 1       | 47.65 | 6.469 | 0     |
| 2       | 47.66 | 6.392 | 0.064 |
| Average | 47.66 | 6.431 | 0.032 |

### Table S5. Element analysis of C, H, N contents in birch wood.

Elemental analysis for C, H, N of birch wood was taken by a Vario ELIII elemental analyzer.

### Table S6. The masses of product after conversion of birch wood.

|       |           |                     | Amount of product (g/biomass-g) |         |               |            |
|-------|-----------|---------------------|---------------------------------|---------|---------------|------------|
| Entry | Substrate | Catalyst            | Sorbitol                        | Xylitol | 1, 4-Sorbitan | Isosorbide |
|       | birch     |                     |                                 |         |               |            |
| 1     | sawdust   | Ni/ZrP <sub>2</sub> | 0.2718                          | 0.1582  | 0.0180        | 0.0161     |

Reaction conditions: 150 mg of substrate, 100 mg of  $Ni/ZrP_2$  with Ni loading of 20%, 5 ml of H<sub>2</sub>O, 5 ml methanol, 4

MPa H<sub>2</sub>, 200 °C, 10 h.

| Catalyst                | $H_2$ desorption area |  |
|-------------------------|-----------------------|--|
| 5% Ni/ZrP <sub>2</sub>  | 298.99                |  |
| 10% Ni/ZrP <sub>2</sub> | 333.48                |  |
| 15% Ni/ZrP <sub>2</sub> | 565.90                |  |
| 20% Ni/ZrP <sub>2</sub> | 1295.20               |  |
| 25% Ni/ZrP <sub>2</sub> | 901.78                |  |
| 30% Ni/ZrP <sub>2</sub> | 887.36                |  |

Table S7. The  $\rm H_2$  desorption peaks area of  $\rm Ni/ZrP_2$  with different Ni content.

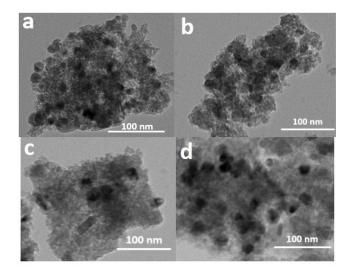

Figure S1. The TEM images of (a) Ni/ZrP<sub>0.5</sub>, (b) Ni/ZrP<sub>1</sub>, (c) Ni/ZrP<sub>1.5</sub>, and (d) Ni/ZrP<sub>3</sub>. The Ni loading of catalysts is

15%.

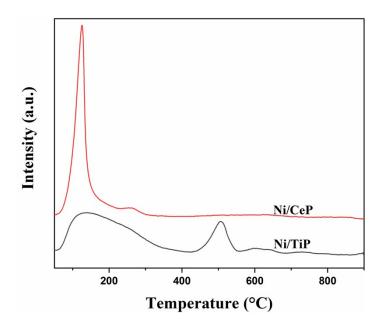

Figure S2. NH<sub>3</sub>-TPD profiles of Ni/CeP and Ni/TiP catalysts. The Ni loading of catalysts is 15%.

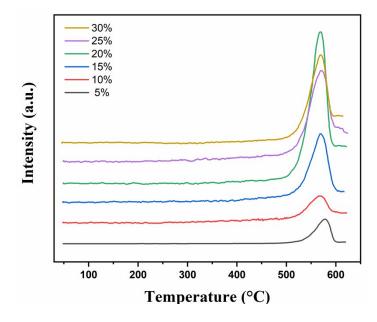

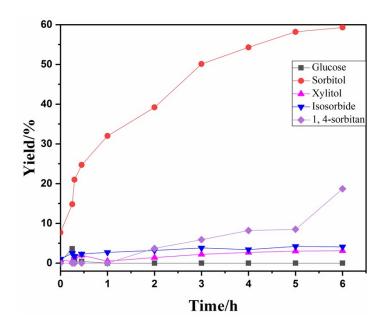

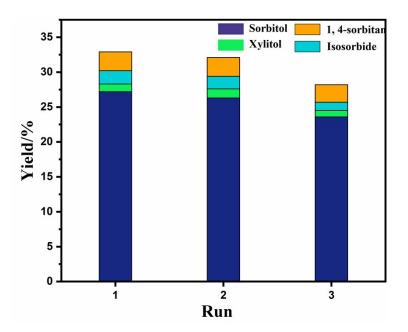

Figure S3. H<sub>2</sub>-TPD profiles for Ni/ZrP<sub>2</sub> with different Ni content.

**Figure S4.** Product distributions of cellulose conversion as function of time. Reaction conditions: 50 mg of microcrystalline cellulose, 50 mg of Ni/ZrP<sub>2</sub> with Ni loading of 20%, 10 ml of H<sub>2</sub>O, 4 MPa H<sub>2</sub>, 200 °C.

**Figure S5.** Results of recycle test for MCC conversion. Reaction conditions: 50 mg of microcrystalline cellulose, 50 mg of Ni/ZrP<sub>2</sub> with Ni loading of 20%, 10 ml of H<sub>2</sub>O, 200 °C, 4 MPa H<sub>2</sub>, 1h.
