## GENERAL EXPERIMENTAL INFROMATION.

All reactions were performed in flame-dried glassware under nitrogen atmosphere. Solvents were distilled prior to use. Reagents were used as purchased from Aladdin, Macklin, Innochem, or TCI unless otherwise noted. Chromatographic separations were performed using Silica Gel, AR, 200-300 mesh. ${ }^{1} \mathrm{H}$ and ${ }^{13} \mathrm{C}$ NMR spectra were obtained on Varian VI-400, VI-500 and VI-600 spectrometers using $\mathrm{CDCl}_{3}$ as the solvent. Infrared spectra were obtained on Thermo Scientific Nicolet iS 50. TLC analysis was visualized using UV, $p$-anisoladehyde and phosphomolybdic acid stains. High-resolution mass spectra were obtained using AB SCIEX X500R QTOF. All spectral data obtained for new compounds are reported here.

## Synthesis of S1. ${ }^{1}$

To a solution of cyclohexane-1,3-dione 10 ( $22.4 \mathrm{~g}, 200 \mathrm{mmol}, 1.0$ equiv) in benzene ( 123 mL ) was added 2-methylpropan-1-ol ( $55 \mathrm{~mL}, 600 \mathrm{mmol}, 3.0$ equiv) and $\mathrm{TsOH} \cdot \mathrm{H}_{2} \mathrm{O}(190 \mathrm{mg}, 1.0 \mathrm{mmol}, 0.005$ equiv) at rt . The reaction mixture was heated with a Dean-Stark trap at $90^{\circ} \mathrm{C}$ for 12 h . The solution was then concentrated under reduced pressure. The residue was purified using flash column chromatography (eluent: petroleum ether $(\mathrm{PE}) /$ EtOAc, ratio $=5: 1)$ to give a yellow oil $(30.9 \mathrm{~g}, 184$ $\mathrm{mmol}, 92 \%$ ) as the product $\mathbf{S 1}$.
