## General Experimental Procedure

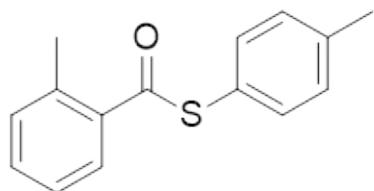

Aryl iodide (1.0 mmol), aryl sulfonyl hydrazide (1.0 mmol), bis(dibenzylideneacetone)dipalladium(0) (29 mg, 0.05 mmol), 1,4-bis(diphenylphosphino)butane (21 mg, 0.05 mmol), 1,4-diazabicyclo[2.2.2]octane (152 mg, 1.0 mmol) and toluene (3 mL) were added to the autoclave. The autoclave was closed, purged three times with carbon monoxide, pressurized with 8.0 atm of CO, and then stirred at 80 °C for 12 h. Excess CO was discharged at room temperature. The reaction mixture was quenched with saturated NH<sub>4</sub>Cl and diluted with ethyl acetate and washed with saturated NaCl (50 mL × 2). The organic layer was dried over anhydrous Mg<sub>2</sub>SO<sub>4</sub>, filtered and concentrated under vacuum. Evaporation of the solvent under reduced pressure provided the crude product, which was purified by column chromatography on silica gel (eluent: hexane / ethyl acetate = 40 / 1).
