General experimental information

All experiments were carried out under air atmosphere. The enaminones were synthesized following literature process.¹ Other chemicals and solvents used in the experiments were obtained from commercial sources and used directly without further treatment. The ¹H and ¹³C NMR spectra were recorded in 400 MHz apparatus in CDCl₃ solvent. The frequencies for ¹H NMR and ¹³C NMR test are 400 MHz and 100 MHz, respectively. The chemical shifts were reported in ppm with TMS as internal standard. Melting points were tested in X-4A instrument without correcting temperature, and the HRMS data for all new products were obtained under ESI model in a mass spectrometer equipped with TOF analyser.
