1. The anti-inflammatory effects of compounds 1-5.

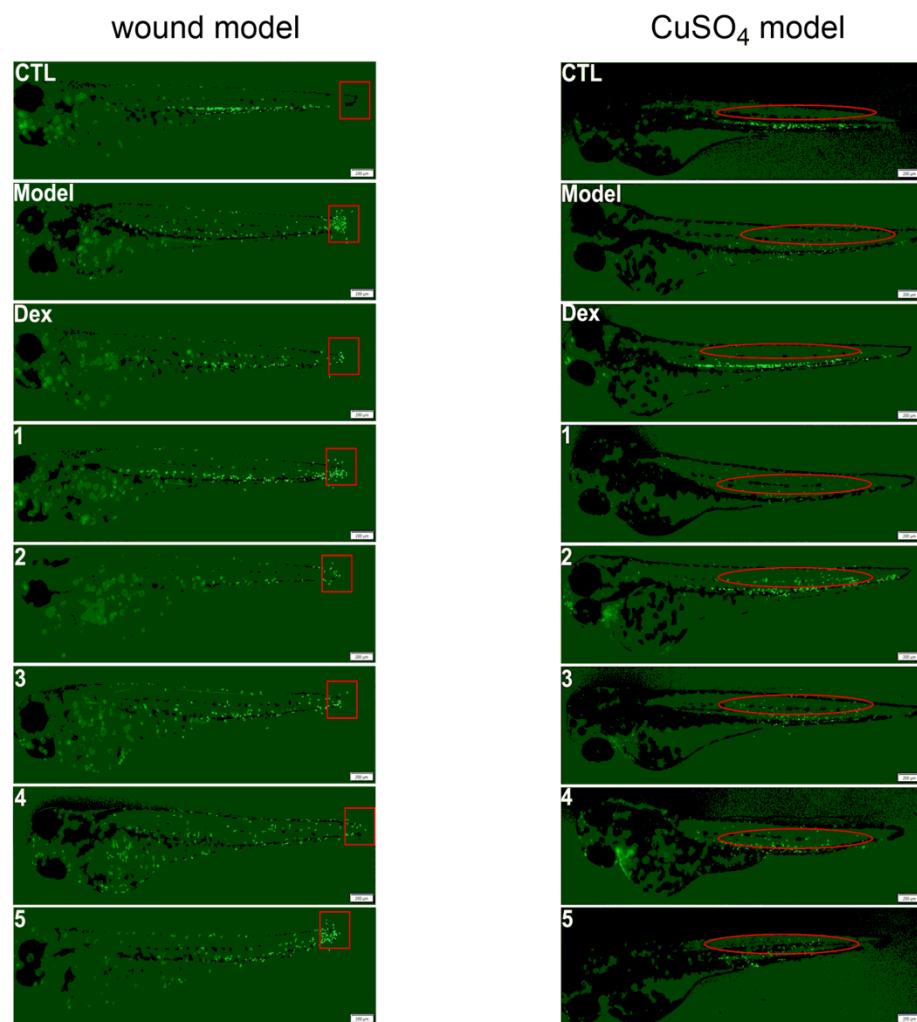

Figure S1. Anti-inflammatory effects of compounds **1-5**. The neutrophil number (green fluorescence) in inflammatory sites (red rectangle or ellipse marked) in wound (left panel) and CuSO_4 (right panel) models was observed by fluorescence microscopy (MVX10, Olympus, Japan).

2. Structural elucidation of 6-10.

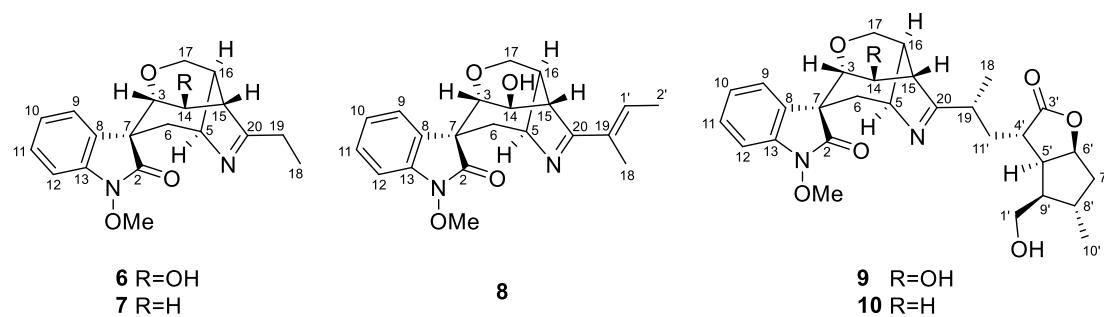

Figure S2. Chemical structures of **6-10**.

Compounds **6-10** were identified as 14-hydroxygelsenicine¹, gelsenicine², 14 β -hydroxygelsedethenine³, 14 α -hydroxygelsamydine⁴, and gelsamydine² by comparison their spectroscopic data with those of literatures, respectively.

3. Dynamic HPLC analysis of **4 and **5** with different temperatures and irradiations.**

Compounds **4** and **5** were solved in MeOH, then the HPLC spectra were recorded on an Agilent 1260 instrument equipped with DAD detector and a Waters XbridgeTM C₁₈ OBD reversed-phase column (4.6×250 mm, 5 μm, USA). The column temperature was controlled at 298 K by an Agilent 1260 TCCVL (USA). The mobile phase was MeCN-H₂O-Et₂NH (22:78:0.01 v/v/v), and the flow rate was 1 mL/min.

Elevated-temperature experiment: Compounds **4** and **5** was protected from light at different temperatures (298, 318, 338, 358 K) and analyzed by HPLC, respectively. Each temperature gradient was holding for 2 hours. (figure S84-85)

Visible/UV light irradiation experiment: Compounds **4** and **5** was exposed under an incandescent lamp (as a source of visible light) or UV light (254 or 365 nm) and analyzed by HPLC at different times (0, 1, 4, 24 h, at room temperature). (figure S86-91)
