

Observation of soft glassy dynamics in a magnetic colloid exposed to an external magnetic field

Sithara Vinod, Philip J. Camp and J.Philip

Supplemental Material

Phase contrast microscope with Magnetic field control stage

For microscopy, the source of the magnetic field was a permanent magnet sitting on two arms of a motorized stage, which was brought closer to the sample using a stepper motor. For microscopy, the source of the magnetic field was a permanent magnet sitting on two arms of a motorized stage, which was brought closer to the sample using a stepper motor.
