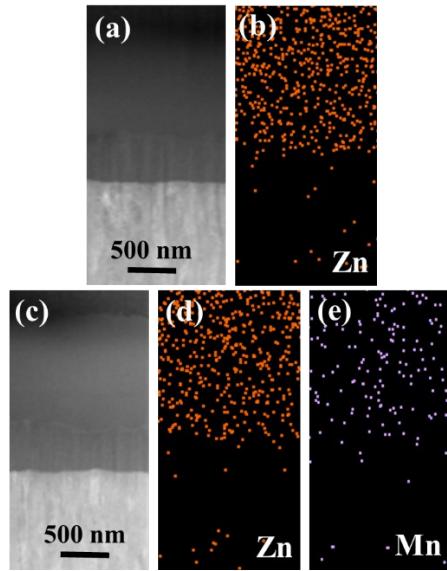

Fig. S1 TEM/EELS analysis of the CAZTSSe-based thin films. The high-angle annular dark field (HAADF) survey images of the S-Ref sample (a) and the S-10 sample (c). The qualitative elemental EELS maps of Zn and Mn elements for the S-Ref sample (b) and the S-10 sample (d, e), respectively.

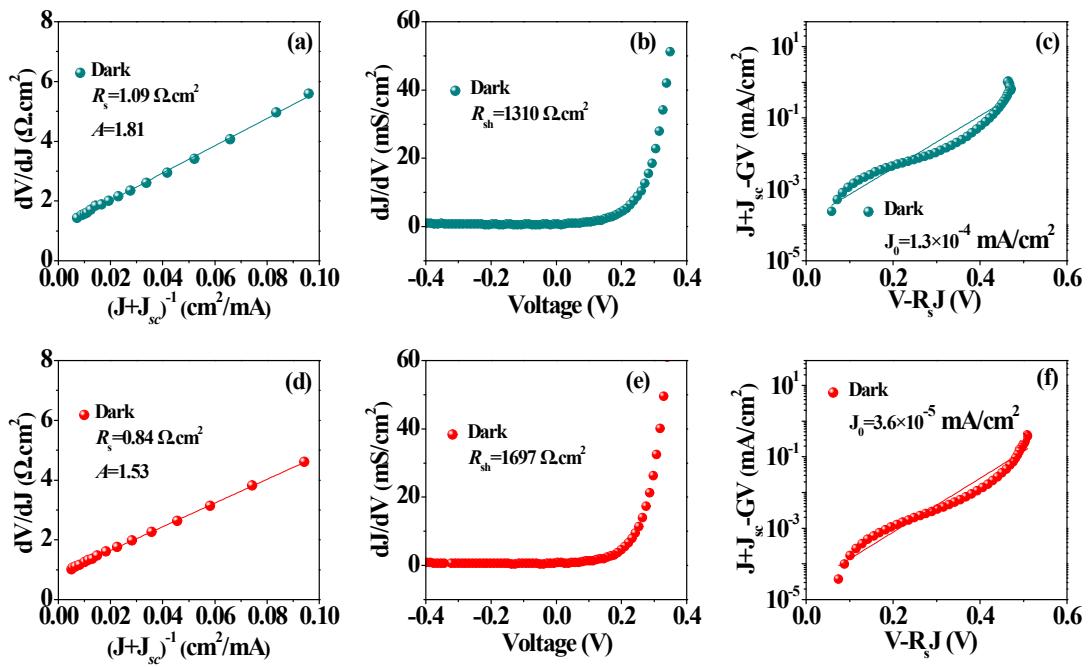

Fig. S2 Calculation of the diode parameters for the champion S-Ref and S-10 solar cells on the basis of dark  $J-V$  curves: (a-c) S-Ref sample and (d-f) S-10 sample. (a, d) series resistance  $R_s$  and diode quality factor  $A$ , (b, e) shunt resistance  $R_{sh}$ . (c, f) the reverse saturation current density  $J_0$ .
