Bicyclic *o*-Quinoidal structures

Pyrrole-based quinoidal structures

Thiophene- and furan-based quinoidal structures

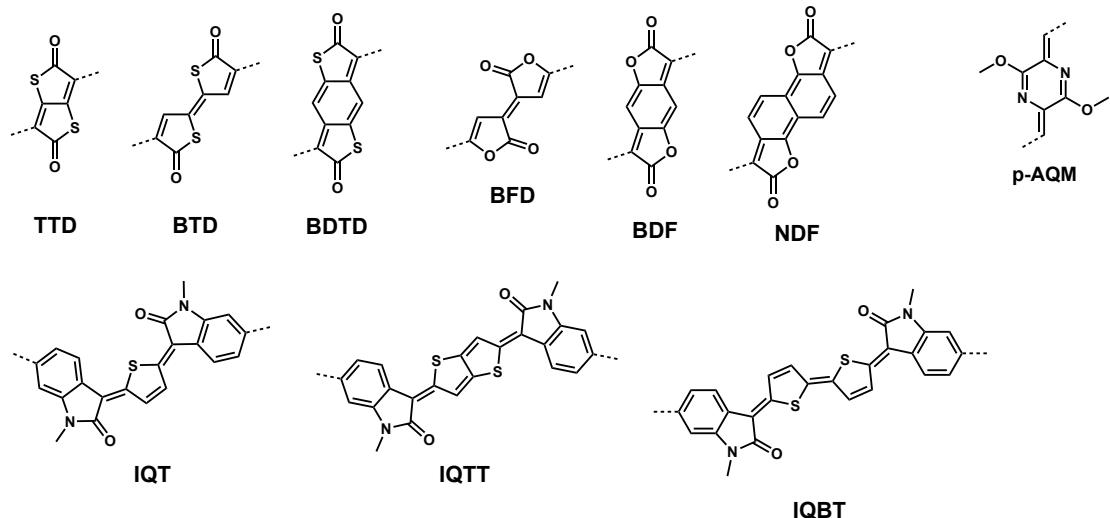

Fig S1. The trimer models of the polymer consisting of the quinoid structure and bithiophene for the computation using the DFT method at the B3LYP/6-31G(d) level.

Table S1. Calculated HOMO, LUMO, and bandgap (E_g) of the trimer models. Torsion angle between the quinoid unit and the adjacent thiophene ring, and bond length in the adjacent thiophene ring in the model compounds. Optimization of the structure and calculation were carried out by the DFT method at the B3LYP/6-31G(d) level.

| Acceptor | HOMO | LUMO | E_g | Torsion ^a | Bond length of each bond number ^b (Å) | | | | |
|----------|-------|-------|-------|----------------------|--|---------|---------|---------|---------|
