<b>Se2</b>	264 6.566), 341 (16.354), 396 (4.252)

## TIME-CORRELATED SINGLE-PHOTON COUNTING AND FITTING

The emission decays at maxima emission of the Cu(I) complexes 10 wt% in PMMA (see Figure S19) were best fitted by a bi-exponential function. The excited state lifetimes and their relative amplitudes are showed in Table S4 (see ESI). The longer lifetimes ( $\tau_1$ ), in the range of 2.7  $\mu$ s to 800 ns, were attributed to delayed fluorescence emission, whilst the shorter lifetimes ( $\tau_2$ ) ranging from 20 to 90 ns were attributed to the prompt fluorescence emission.

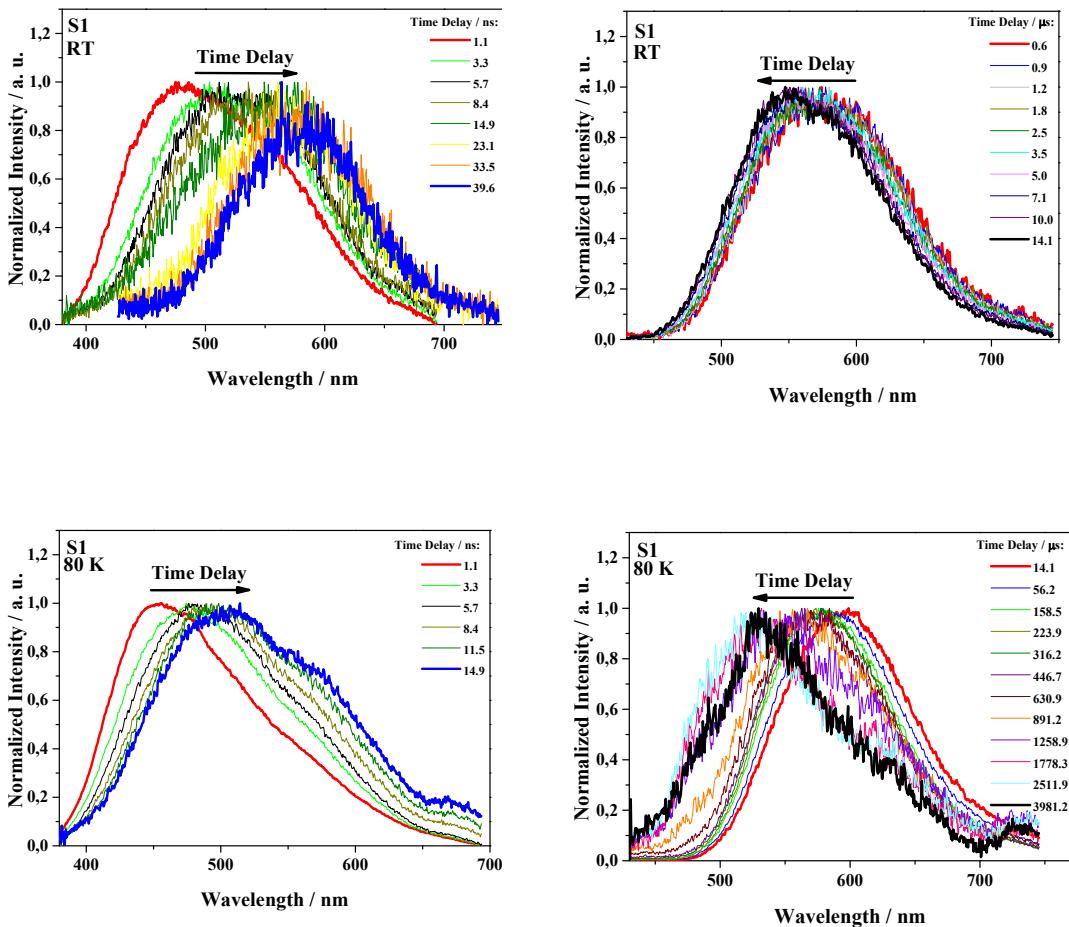

**Table S3.** Excited-state lifetimes and their relative amplitudes of the Cu (I) complexes dispersed 10 wt% in PMMA measured at maximum emission wavelength.

	$\tau_1$ ( $\mu$ s)	A <sub>1</sub> (%)	$\tau_2$ ( $\mu$ s)	A <sub>2</sub> (%)	$\chi^2$
<b>C1</b>	2.7±0.2	64.21	0.02±0.01	35.79	1.022
<b>S1</b>	1.2±0.7	58.53	0.08±0.01	41.47	0.940
<b>Se1</b>	1.1±0.5	38.27	0.09±0.01	61.73	0.974
<b>C2</b>	2.2±0.1	73.37	0.08±0.01	26.63	0.964
<b>S2</b>	1.2±0.1	68.33	0.07±0.01	31.67	0.934
<b>Se2</b>	0.8±0.1	48.60	0.07±0.01	51.40	0.943

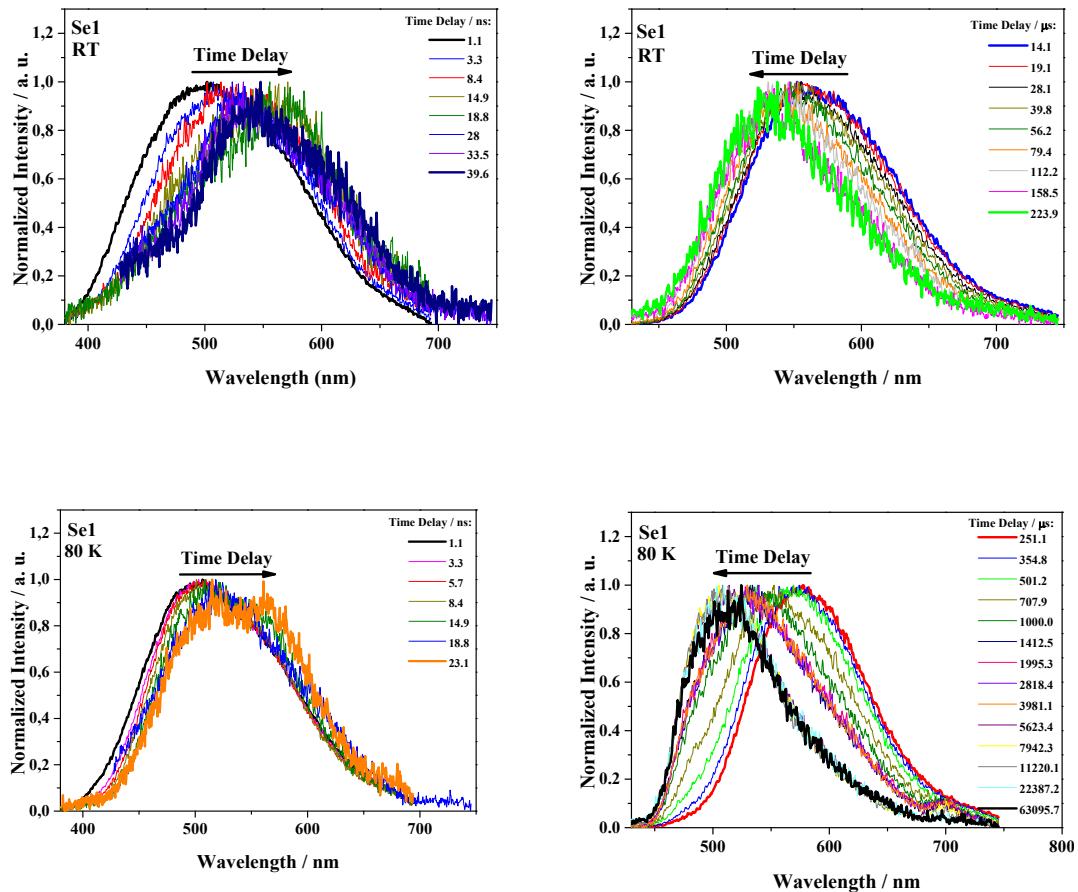

**Figure S10.** Emission decay curves of the Cu (I) complexes dispersed 10 wt% in PMMA fitted with a bi-exponential function,

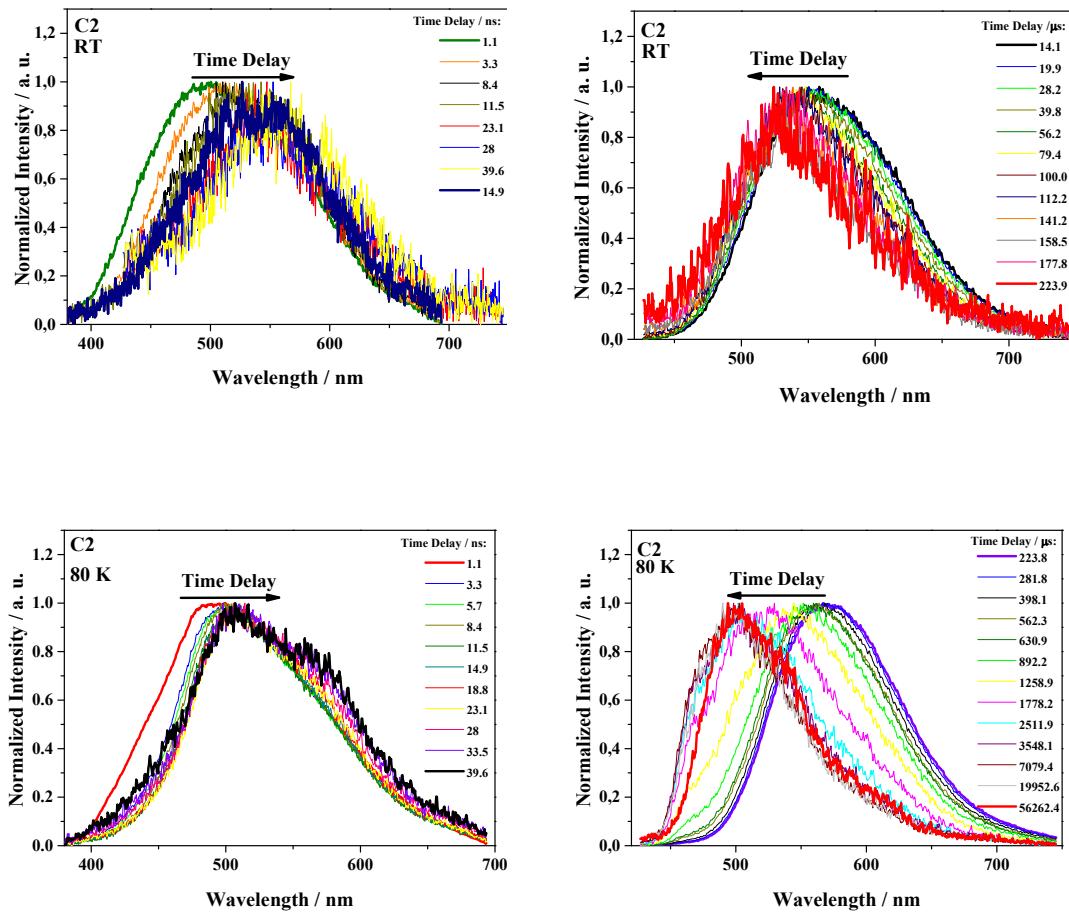

## TIME RESOLVED EMISSION SPECTRA

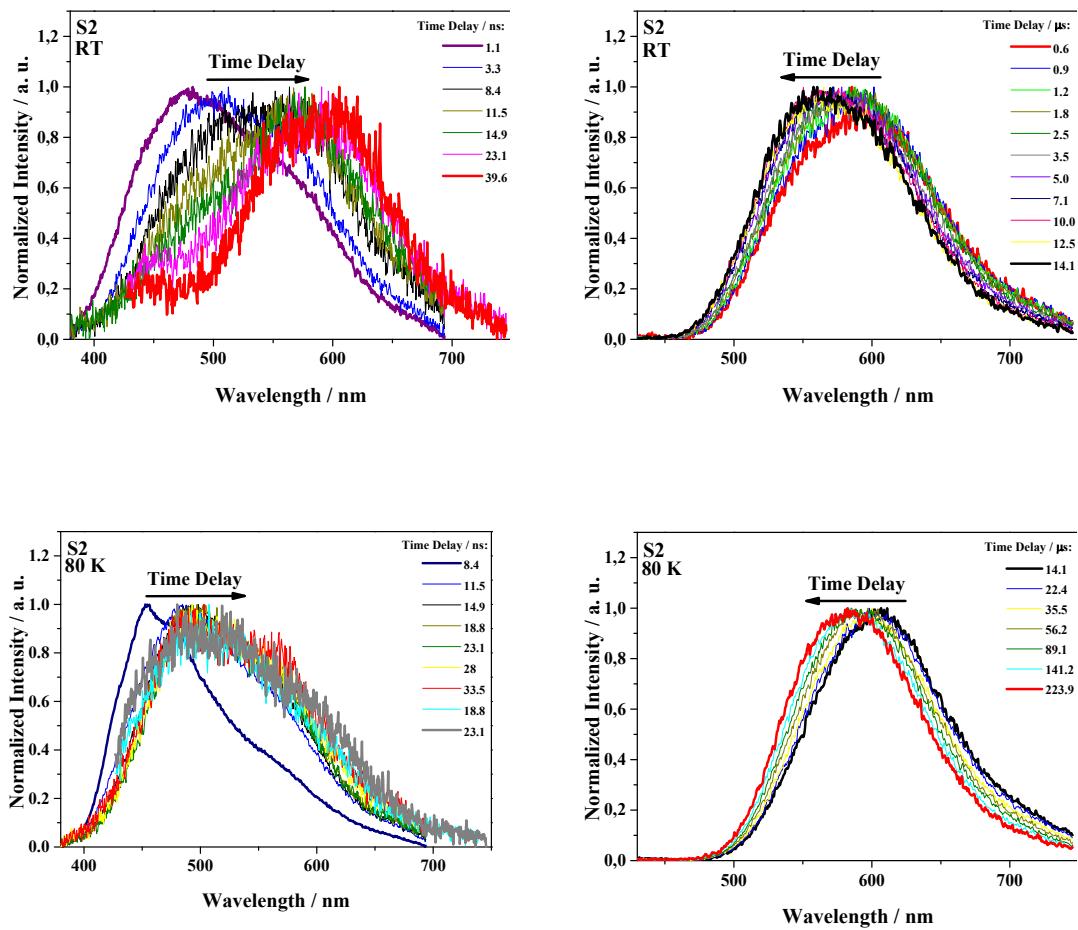

**Figure S11.** Time resolved normalized emission spectra at room temperature (up) and 80K (down) for S1 10 wt% in PMMA. Films were excited at 355 nm.

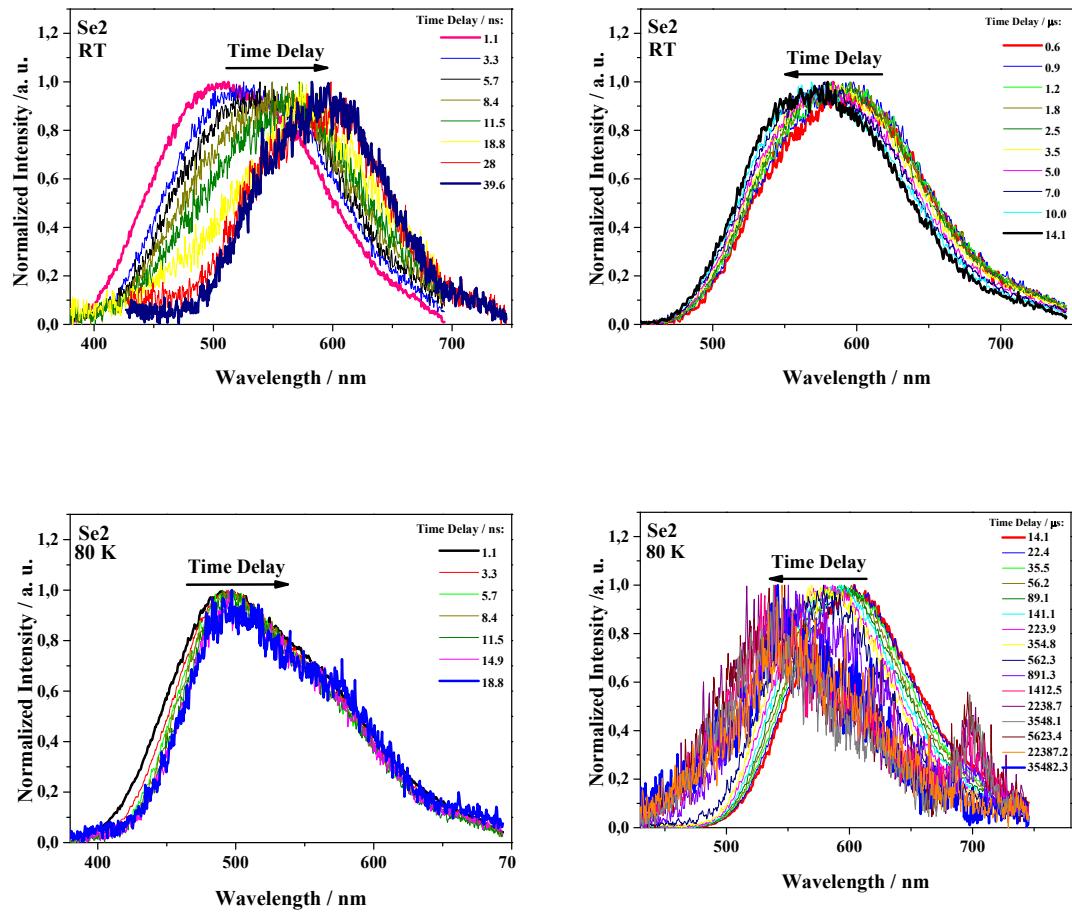

**Figure S12.** Time resolved normalized emission spectra at room temperature (up) and 80K (down) for **Se1** 10 wt% in PMMA. Films were excited at 355 nm.

**Figure S13.** Time resolved normalized emission spectra at room temperature (up) and 80K (down) for C2 10 wt% in PMMA. Films were excited at 355 nm.

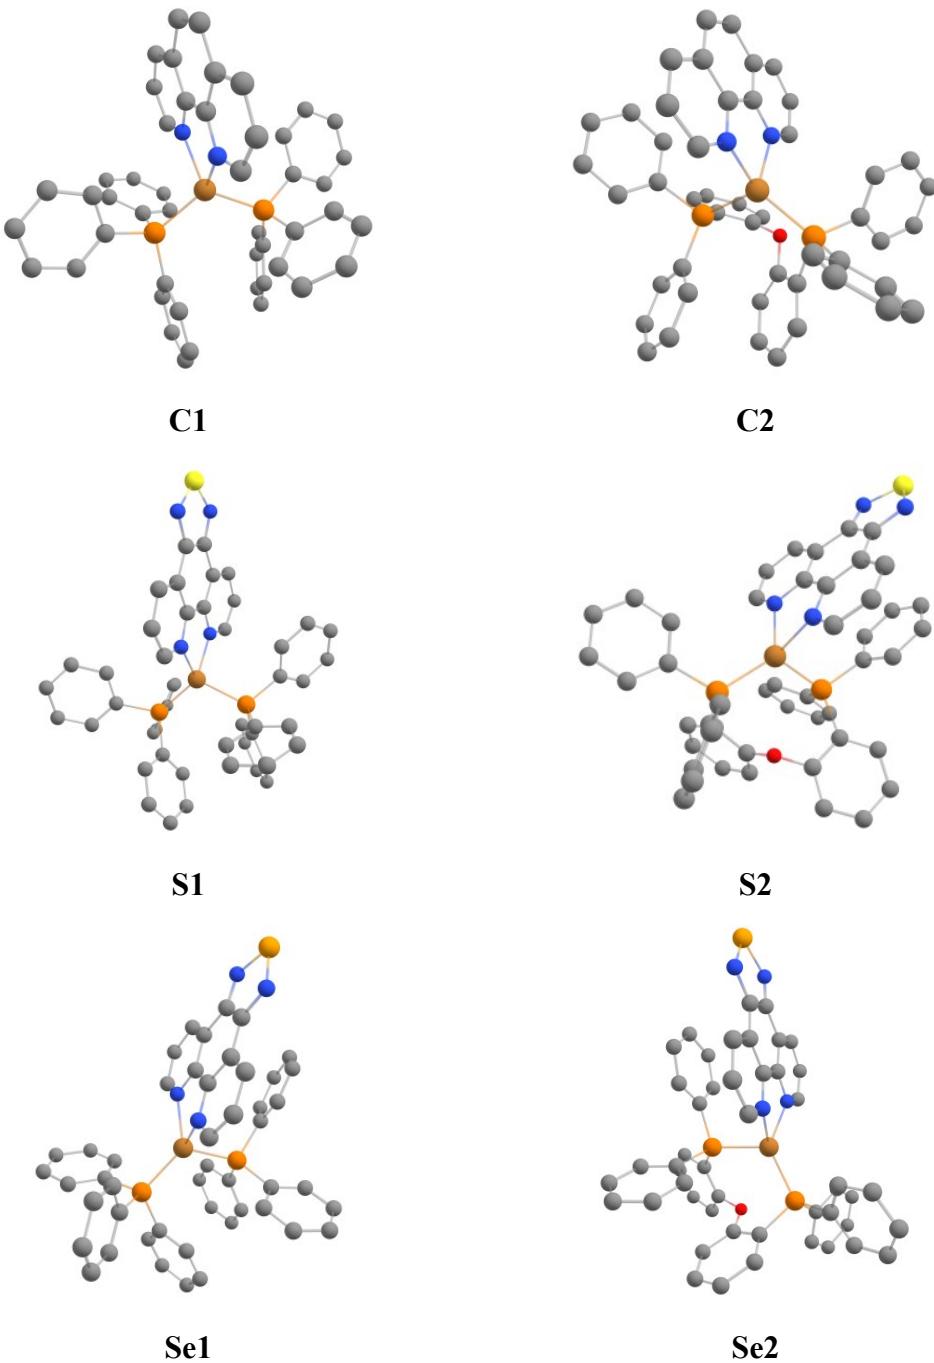

**Figure S14.** Time resolved normalized emission spectra at room temperature (up) and 80K (down) for S2 10 wt% in PMMA. Films were excited at 355 nm.

**Figure S15.** Time resolved normalized emission spectra at room temperature (up) and 80K (down) for **Se2** 10 wt% in PMMA. Films were excited at 355 nm.

## THEORETICAL MODELING

**Figure S16.** Optimized geometry for complexes **C1-Se2** obtained from DFT using PBE0/def2-TZVP(-f).

**Table S4.** Selected bond lengths ( $\text{\AA}$ ), bond angles ( $^\circ$ ) at optimized  $S_0$  geometry for complexes **C1-Se2** using PBE0/def2-TZVP(-f).

**Figure S17.** Multiplied HOMO and LUMO orbitals of **C1-Se2** to show their overlap. As one can see the overlap which is mainly centered at copper atom is reduced from **C1** to **Se1** and from **C2** to **Se2**. The isosurface was increased by a factor of 10 times in comparison to those of the molecular orbitals in Figure 5.

**Figure S18.** Experimental absorption spectra of **C1-Se2** in  $\text{CH}_2\text{Cl}_2$  and the theoretical absorption spectra (filled curves) calculated using PBE0/def2-TZVP(-f) and convoluted with Gaussians of 0.15 eV width.

**Figure S19.** HOMO, HOMO-1 and HOMO-2 orbitals of complexes **C1–Se2** and their energies calculated using PBE0/def2-TZVP(-f).
