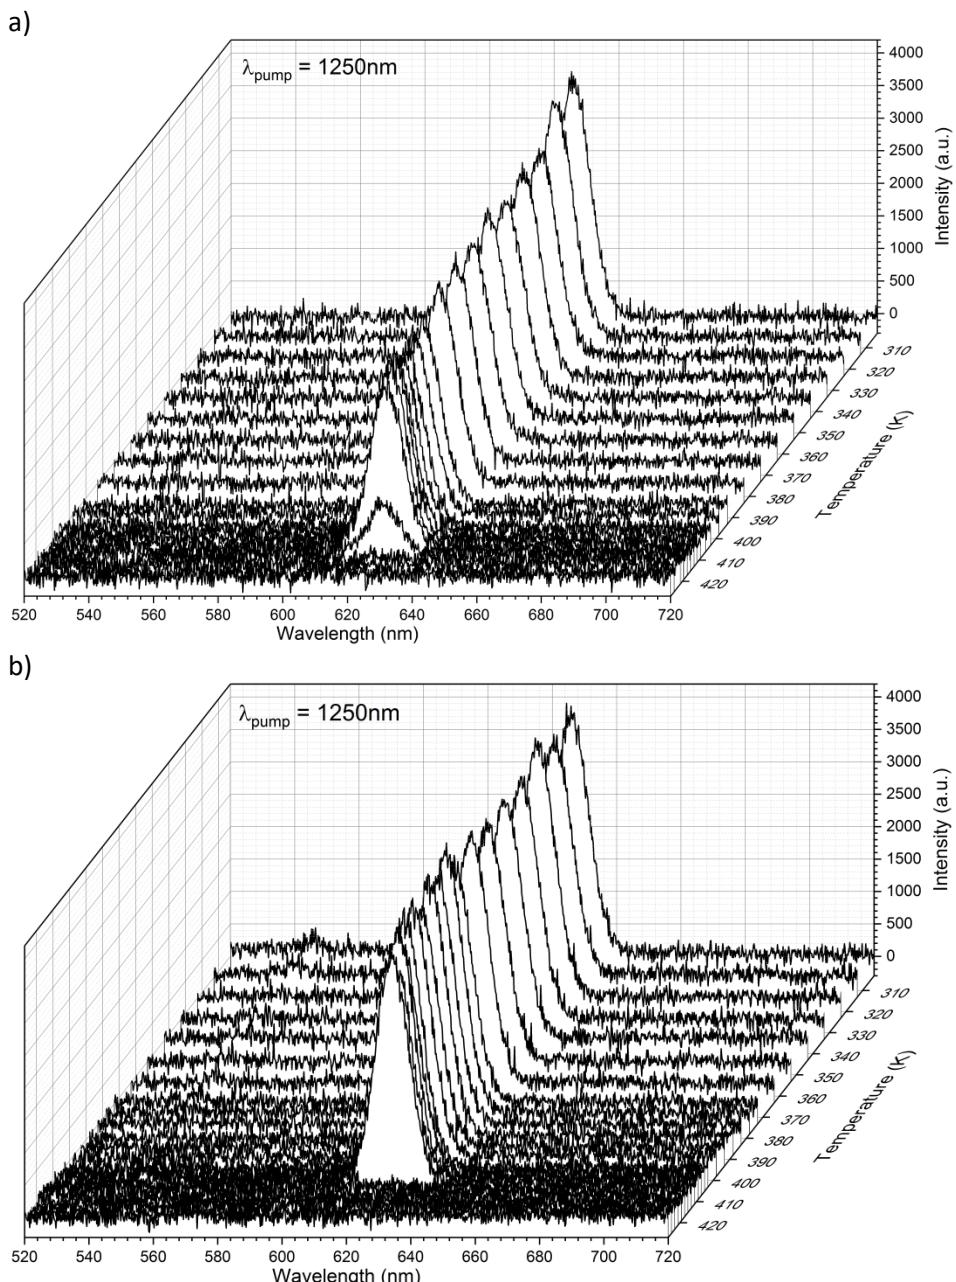

Fig. S3. Spectra obtained upon irradiation with the 1250 nm femtosecond laser pulses for TMAO-Co between 303K and 427K a) heating runs and b) cooling runs.

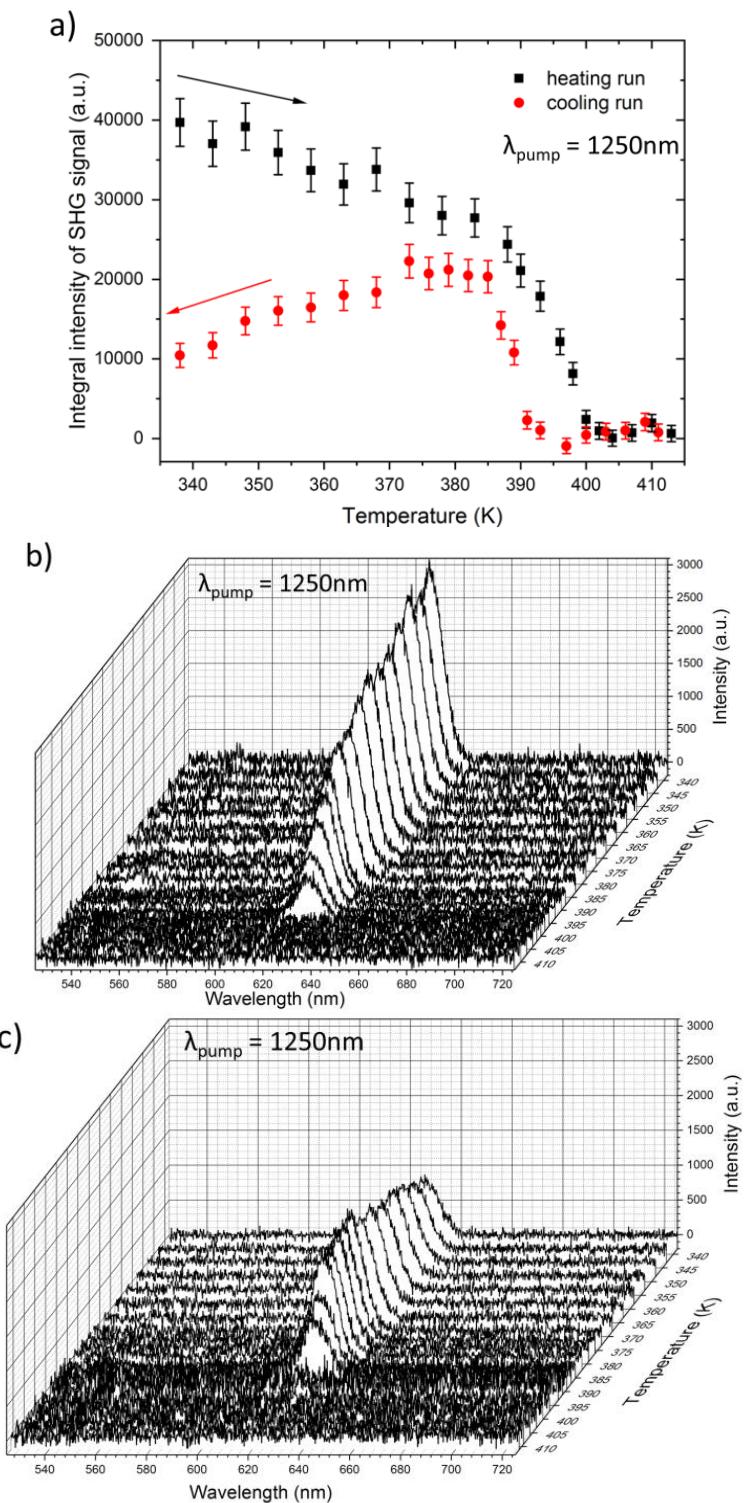

Fig. S4. a) Plots of integral intensity of SHG signal of **TMAO-Fe** for heating and cooling runs. b) Spectra obtained upon irradiation with 1250 nm femtosecond laser pulses of **TMAO-Fe** between 338 and 413 K on heating. c) Spectra obtained upon irradiation with 1250 nm femtosecond laser pulses of **TMAO-Fe** between 338 and 411 K on cooling.

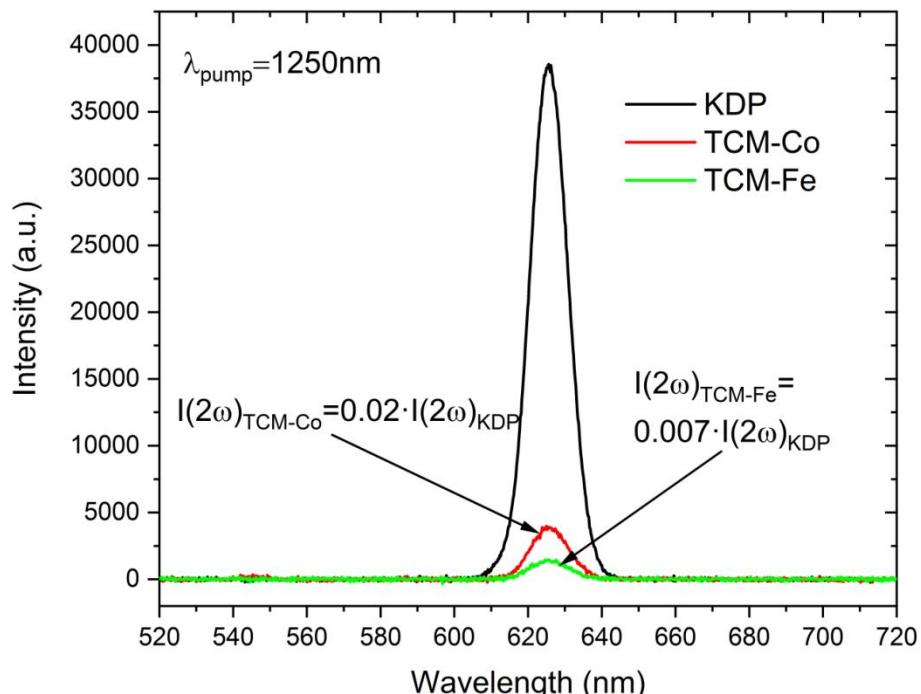

Fig. S5. SHG traces for **TMAO-Fe** (green), **TMAO-Co** (red) and that of KDP (black) obtained upon irradiation with 1250 nm femtosecond laser pulses. Signal collection time was equal to 6000 ms for **TMAO-Co** and **TMAO-Fe**, and 1200 ms for KDP; for clarity of presentation signal intensities are not normalized to the same integration time.

As noted in the main paper, in contrast with many molecular perovskites, **TMAO-Fe** undergoes a distinct “bond-switching” across its phase transition from the aristotype $Fm\bar{3}m$ structure. In the low-symmetry Cc phase, as well as the reference $C2/c$ structure, some $K\cdots N-C-Fe$ links, which form the edges of the framework cage, break at the relatively ionic $K\cdots N$ bonds. The potassium and the nitrogen atoms re-connect through the -OH moiety of the A-site $TMAO^+$ cation, forming a new $K\cdots O-H\cdots N-C-Fe$ edge of the framework cage. Therefore, when we perform functional group analysis, an equally valid alternative would be to consider the -OH group as part of the framework, leaving $(CH_3)_3N\cdots$ alone as the A part. With this new separation formalism, we find that while the polarization along the c -axis stays almost unchanged, here the framework also contributes more than half of the polarization along the a -axis, while it has contributed little in the previous calculation. We can therefore further conclude that for the A-site $TMAO^+$ cation, the polarization along a comes roughly equally both from the trimethylammonium moiety and from the hydroxide group. Results from both sets of functional group analysis are presented in Table S5 below.

Table S5. Ferroelectric polarization of **TMAO-M**, calculated by DFT and a simple point-charge model. All values are given in units of $\mu C\text{ cm}^{-2}$.
