Supporting tables and figures

Figure S1. The setting-up scheme for the thermal imaging measurement.

Figure S2. The size distribution of CdSe/CdS.

Figure S3. PL spectra recorded from the LSC based on CdSe/CdS QDs/PLMA polymer.

Figure S4. A3 is the selected area of the LSC for the temperature monitoring. A1 and A2 are the LSC exposed without and with sunlight (100 mW/cm^2), respectively.

| Table S1. The dimension and mass of the LSCs | 5. |
|---|----|
|---|----|

| Туре | Mass (g) | Long (cm) | Width (cm) | Thin (mm) |
|-----------------------|----------|-----------|------------|-----------|
| QDs/PLMA | 13.43 | 6.5 | 7 | 3 |
| QDs/PLMA-PMMA | 73.7 | 10 | 10 | 7 |
| QDs/PMMA-Glass | 122.24 | 10 | 10 | 5 |

| Ambient | Refractive | Total internal reflection | Reflectance |
|-------------|------------|---------------------------|-------------|
| Temperature | index | efficiency | |
| Glass | 1.50 | 0.745 | 4% |
| PLMA | 1.49 | 0.741 | 3.9% |
| PMMA | 1.49 | 0.741 | 3.9% |

Table S2. Measured Refractive Index and calculated Total internal reflection efficiency and Reflectance.

Total internal reflection efficiency, P_{TIR} is defined by the escape cone identified by the

critical angle θ of the air/glass interface: 1

$$P_{TIR} = \sqrt{1 - \left(\frac{n_{air}}{n}\right)^2}$$

R can be calculated as follows:¹

$$R = \frac{(n - n_{air})^2}{(n_{air} + n)^2}$$

Table S3. The saturation temperature of LSCs during the thermal measurement.

| Ambient | QDs/PLMA | QDs/PLMA- | QDs/PMMA-Glass |
|-------------|----------|-----------|----------------|
| Temperature | (°C) | PMMA (°C) | (°C) |
| 10 °C | 25.6 | 22 | 15.5 |
| 20 °C | 32.25 | 28.64 | 26.08 |
| 30 °C | 40.35 | 39.42 | 33.94 |
| 40 °C | 49.16 | 46.87 | 41.88 |

Table S4. The saturation time of LSCs during the thermal measurement.

| Ambient Temperature | QDs/PLMA (s) | QDs/PLMA- PMMA (s) | QDs/PMMA-Glass (s) |
|------------------------|-----------------|-----------------------|-----------------------|
| 10 °C | 337 | 410 | 226 |
| 20 °C | 272 | 367 | 308 |
| 30 °C | 313 | 487 | 312 |

| 40 °C | 254 | 387 | 201 |
|-------|-----|-----|-----|
|-------|-----|-----|-----|

| Ambient | QDs/PLMA | QDs/PLMA- | QDs/PMMA-Glass |
|-------------|----------|---------------|----------------|
| Temperature | (°C/min) | PMMA (°C/min) | (°C/min) |
| 10 °C | 2.46 | 1.49 | 0.98 |
| 20 °C | 2.34 | 1.26 | 1 |
| 30 °C | 2.29 | 1.28 | 0.99 |
| 40 °C | 2.34 | 1.45 | 1.09 |

 Table S5. The temperature variation rate of LSCs.

Table S6. The temperature variation of the measured LSCs before and after temperature saturation.

| Ambient | QDs/PLMA | QDs/PLMA- | QDs/PMMA-Glass |
|-------------|----------|-----------|-----------------------|
| Temperature | (°C) | PMMA (°C) | (° °) |
| 10 °C | 13.8 | 10.2 | 3.7 |
| 20 °C | 10.59 | 7.71 | 5.15 |
| 30 °C | 11.93 | 10.39 | 5.16 |
| 40 °C | 9.9 | 8.64 | 3.65 |

Table S7. The current output per unit area (mA/cm²) of the solar cells. The arrow bar for all the measured is less than $\pm 0.01 \text{ mA/cm}^2$

| Cycles | QDs/PMMA-Glass | QDs/PMMA-PLMA | QDs/PLMA |
|--------|----------------|---------------|----------|
| 1 | 1.697 | 2.176 | 3.715 |
| 2 | 1.694 | 2.189 | 3.729 |
| 3 | 1.701 | 2.182 | 3.751 |
| 4 | 1.722 | 2.189 | 3.753 |
| 5 | 1.716 | 2.199 | 3.783 |
| 6 | 1.723 | 2.205 | 3.774 |
| 7 | 1.730 | 2.214 | 3.792 |
