1 **S1. Modification of S proteins onto the surface of SiO<sub>2</sub>@DQD NBs**

2 SiO<sub>2</sub>@DQD NBs were conjugated with S protein via carbodiimide chemistry. Saturated S  
3 protein was used to the effectiveness and stability of SiO<sub>2</sub>@DQD-S protein labels. The zeta  
4 potential values of SiO<sub>2</sub>@DQD decreased with increasing antigen amount (5–12.5 µg) and  
5 remained stable at -16.2 mV, indicating the saturated loading of the S protein (Fig. S3).

6

7 **Fig. S3** Zeta potential of SiO<sub>2</sub>@DQD versus the amount of S protein modified on their surface.

8 The error bars represent the standard deviations from three measurements.
