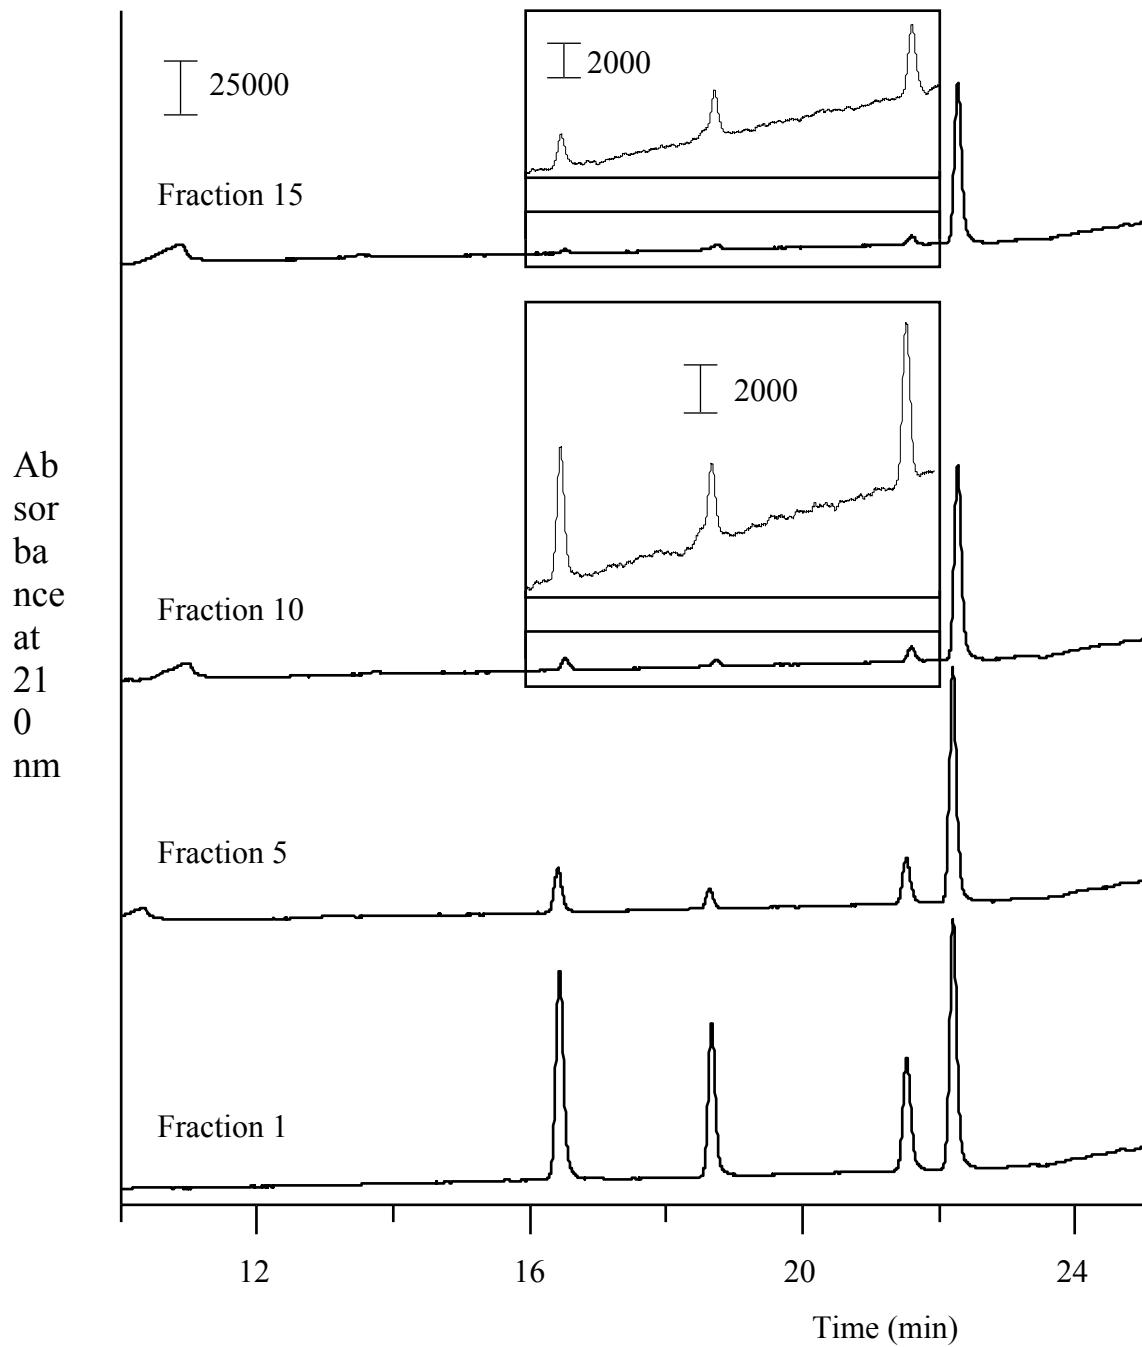

**Figure S1.** Scanning electron micrograph (400-fold magnification) without and with gold-covered samples a) illustrating the dual SPE beads of the reversed-phase Oasis Prime HLB sorbent material, and b) particle size distribution of the reversed-phase Oasis Prime HLB sorbent material.

**Figure S2.** Extraction efficiency of phthalate congeners and BPA in gastrointestinal extracts (UBM) using 120 mg Oasis HLB Prime and increasing volumes of eluent.

**Figure S3.** Illustration of raw chromatograms of oral bioaccessible fractions of microplastic-laden xenobiotics as obtained by dynamic flow-through extraction followed by in-line solid-phase extraction and HPLC analysis.

**Table S1.** Composition of the gastrointestinal fluids according to UBM method

Reagents	Composition (mg L <sup>-1</sup> )
