Figure S2. Optimization of the extraction conditions for metabolites and proteins. (A) SDS-PAGE image of the proteins obtained from microvesicles without extraction of metabolites (lane 1: the control group), with extraction of metabolites using different concentration of acetonitrile (lane 2-5: 50%, 60%, 70%, 80%) or methanol (lane 6-9: 50%, 60%, 70%, 80%). 10 µg of proteins were loaded per lane. (B) The number of protein groups and peptides identified from microvesicles with 50% acetonitrile treatment, with 50% methanol treatment and without organic solvent treatment. (C) The number of feature peaks identified in positive detection mode from the metabolites extracted using 50% acetonitrile and different concentration of methanol (50%, 60%, 70%, 80%).

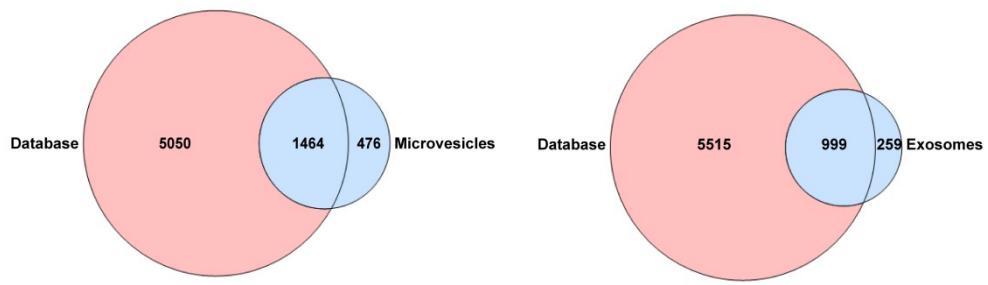

Figure S3. Venn diagrams showing the overlap between the exosome database from ExoCarta and EVs data from our experiments. There was a 79% overlap between the exosome database and our proteins identified from exosomes and a 75% overlap between the exosome database and our proteins identified from microvesicles.

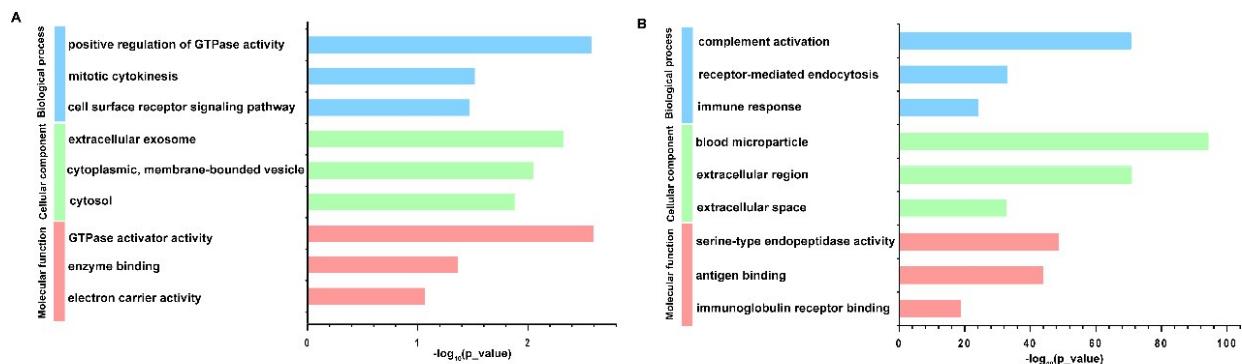

Figure S4. Gene ontology analysis of the up-regulated proteins in exosomes (A) and the up-regulated proteins in microvesicles (B). The three gene ontology categories (biological process, cellular component and molecular function) are displayed in different colors.

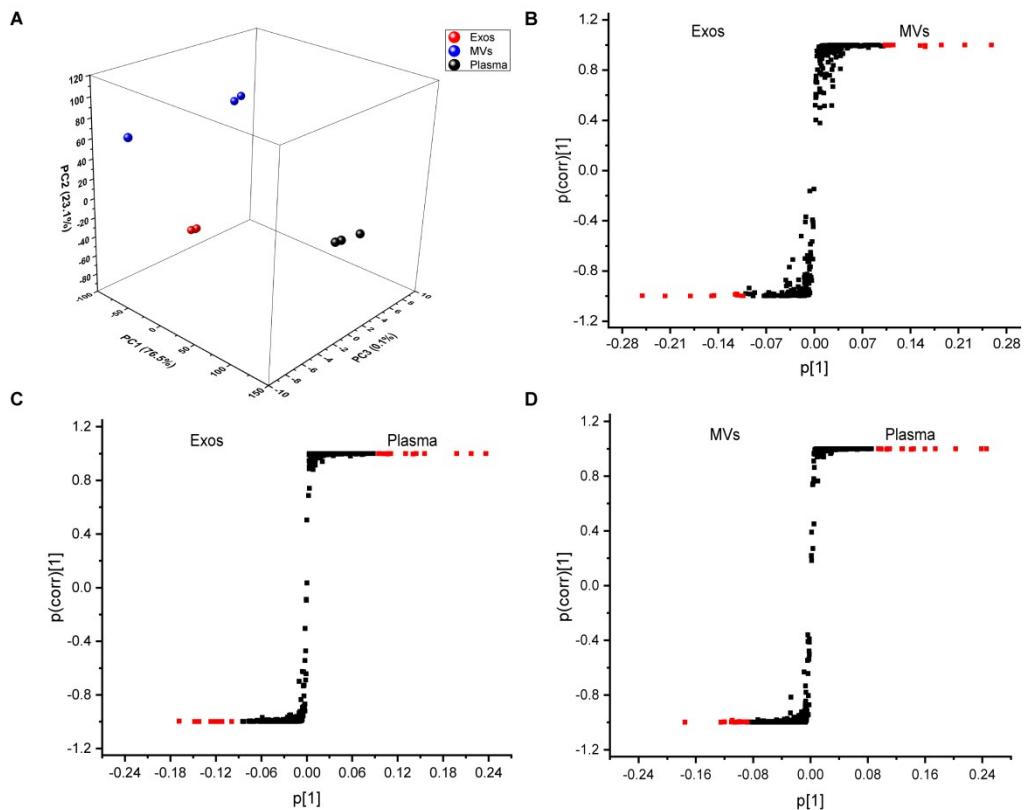

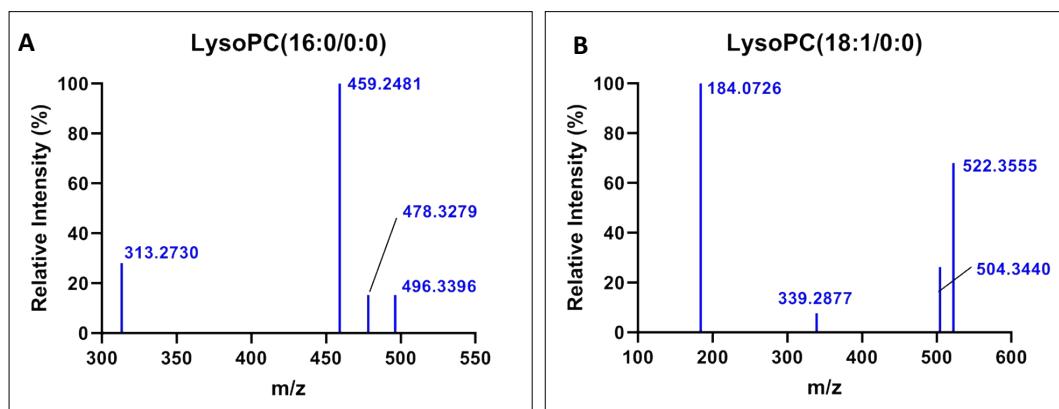

Figure S5. PCA analysis of metabolites from exosomes, microvesicles and plasma identified in negative ion mode (A). S-plot of OPLS-DA models of metabolites identified in negative ion mode: exosomes vs. microvesicles (B), exosomes vs. plasma (C), microvesicles vs. plasma (D). Metabolites with VIP > 2 are colored in red.

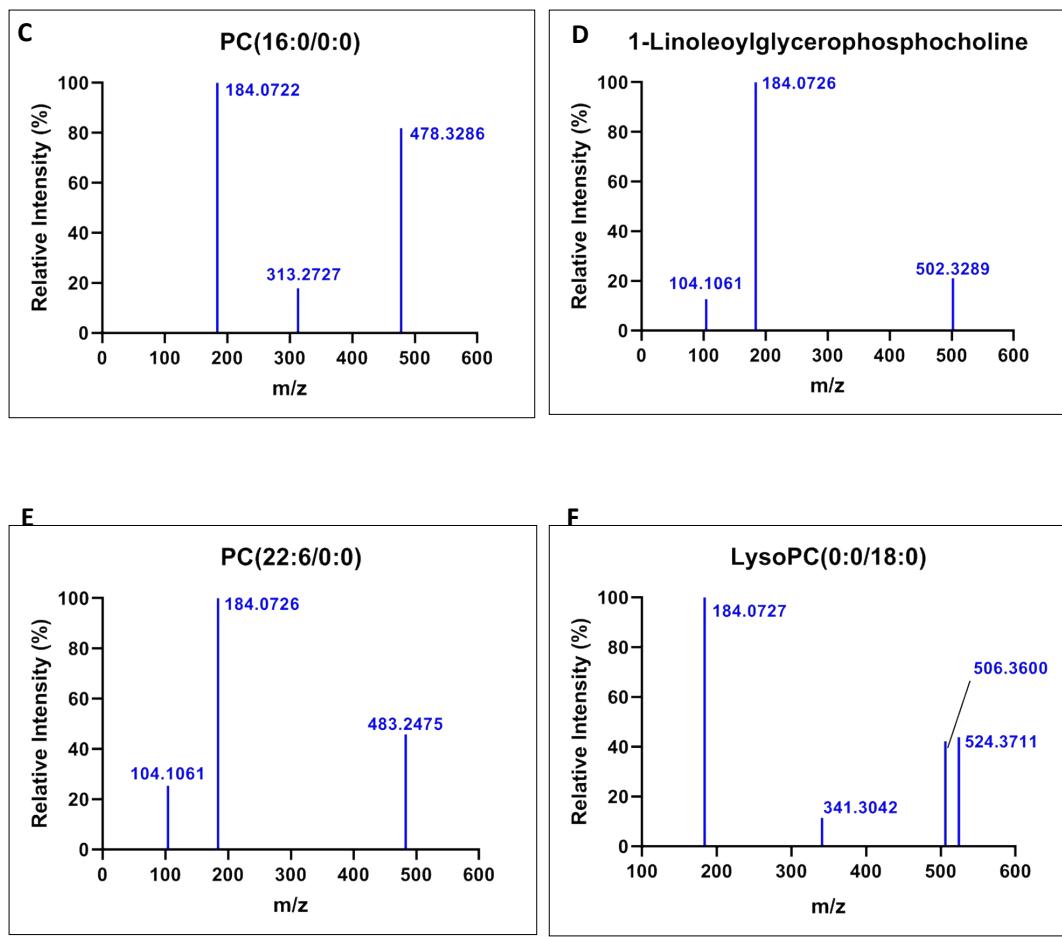

Figure S6. Typical MS/MS spectra of several validated differential metabolites.

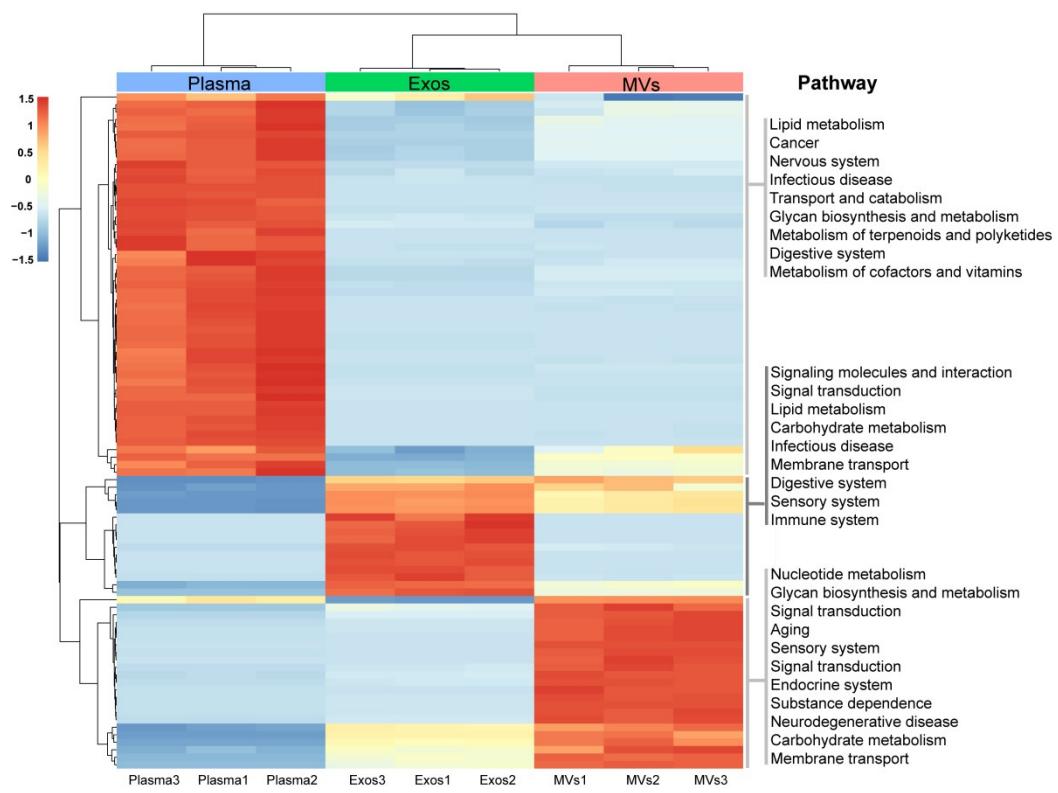

Figure S7. Heatmap of differential metabolites identified among microvesicles, plasma, and exosomes. The expression changes of metabolites are shown on a relative scale, with depletion colored in blue and enrichment colored in red. Clusters from the heatmap underwent metabolites KEGG pathway enrichment analysis. Significantly enriched KEGG terms are shown on the right.
