Table S1. The cooperation between calculated parameters from 30-50 ns and the average value

| PAHs | $P\left(\mathrm{~cm} \cdot \mathrm{~s}^{-1}\right)$ |  |  |  |  |  | $\tau$ (ms) |  |  | $\log K_{\text {LW }}$ |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 35-40 | 40-45 | 45-50 | 30-50 | average | 35-40 | 40-45 | 45-50 | 30-50 | average | 35-40 | 40-45 | 45-50 | 30-50 | average |
| NAP | 12.3 | 12.8 | 11.6 | 11.7 | 12.1 | 0.11 | 0.1 | 0.14 | 0.19 | 0.14 | 2.57 | 2.53 | 2.68 | 2.81 | 2.65 |
| PHE | 26.2 | 29.1 | 24.5 | 23.1 | 25.7 | 2.99 | 9.67 | 4.87 | 2.73 | 5.06 | 3.96 | 4.52 | 4.27 | 3.99 | 4.18 |
| ANT | 20.1 | 16.6 | 16.4 | 16.9 | 17.5 | 1.16 | 2.71 | 5.41 | 6.51 | 3.95 | 3.81 | 4.08 | 4.32 | 4.39 | 4.15 |
| PYR | 20.9 | 22.1 | 22.7 | 19.3 | 21.2 | 2.89 | 7.81 | 6.84 | 6.68 | 6.05 | 4.24 | 4.55 | 4.46 | 4.42 | 4.42 |
| CHR | 36.8 | 39.1 | 38.8 | 41.2 | 39.0 | 359.0 | 605.9 | 707 | 469.9 | 535 | 6.49 | 6.73 | 6.73 | 6.58 | 6.63 |
| BAP | 42.5 | 29.7 | 31.7 | 29.2 | 33.3 | 3339.3 | 613.5 | 475.7 | 294.8 | 1180 | 7.57 | 6.62 | 6.49 | 6.2 | 6.72 |
| DBA | 36.0 | 35.4 | 30.4 | 26.4 | 32.1 | 123.2 | 289.3 | 269.9 | 303.4 | 246 | 5.81 | 6.11 | 6.10 | 6.05 | 6.02 |
| COR | 35.2 | 33.1 | 35.4 | 32.7 | 34.1 | 16805 | 11878 | 2254 | 2858 | 8449 | 7.99 | 7.90 | 7.21 | 7.3 | 7.60 |

Figure S1. The fitting relationship between our final result of transmembrane time ( $30-50 \mathrm{~ns}$ ) and average result (three simulation periods of $35-40 \mathrm{~ns}, 40-45 \mathrm{~ns}$ and 4520 ns ), the red line indicate a $1: 1$ agreement.

Figure S2. The time evolution of the z position of the center of mass of single CHR (blue line) and COR (red line). The horizontal lines at $z=0$ and $z=2 n m$ represent the center and surface (which was substituted with the average position of the P ) of lipid membrane, respectively.
(a)

(b) COR $t=40.0 \longrightarrow 42.8 \mathrm{~ns}$

(c)

$$
t=18.6 \longrightarrow 18.9 \mathrm{~ns}
$$

(d) COR

3.0 ns

Figure S3. The typical snapshots of the absorption process of (a) CHR, (b) COR. (c) single CHR, (d) single COR.

Table S2. Summary of all simulations performed

|  | solute | No. of solute | Duration (ns) |
| :--- | :---: | :---: | :---: |
|  | NAP | 1 | $50 \times 32$ |
|  | PHE | 1 | $50 \times 32$ |
|  | ANT | 1 | $50 \times 32$ |
| Constrained MD | PYR | 1 | $50 \times 32$ |
|  | CHR | 1 | $50 \times 32$ |
|  | BAP | 1 | $50 \times 32$ |
|  | DBA | 1 | $50 \times 32$ |
|  | COR | 1 | $50 \times 32$ |
| Unconstrained MD | NAP | 10 | 80 |

|  |  |  |
| :---: | :---: | :---: |
| PYR | 10 | 80 |
| CHR | 10 | 80 |
| COR | 10 | 80 |
| CHR | 1 | 80 |
| COR | 1 | 80 |
