^a Totally aroma-active compounds were identified as the aroma-active compounds.

^bThe RI values that calculated on DB-WAX column in 2D mode; "P" represent for polar column.

^c The NIST RI values were referred from the NIST 14 liabrary.

^d The aroma depiction of each compound was obtained at the sniffer port.

^e The identified mode of each compounds. "S" represented the vertification by authentic reference standards.

^f The thresholds listed in the table were referred the book: Gemert LJV, Compilations of odour threshold values in air, water & other media and compilations of flavour threshold values in water & other media, 2011st ed. Oliemans Punter & Partners BV, Netherlands (2003).
