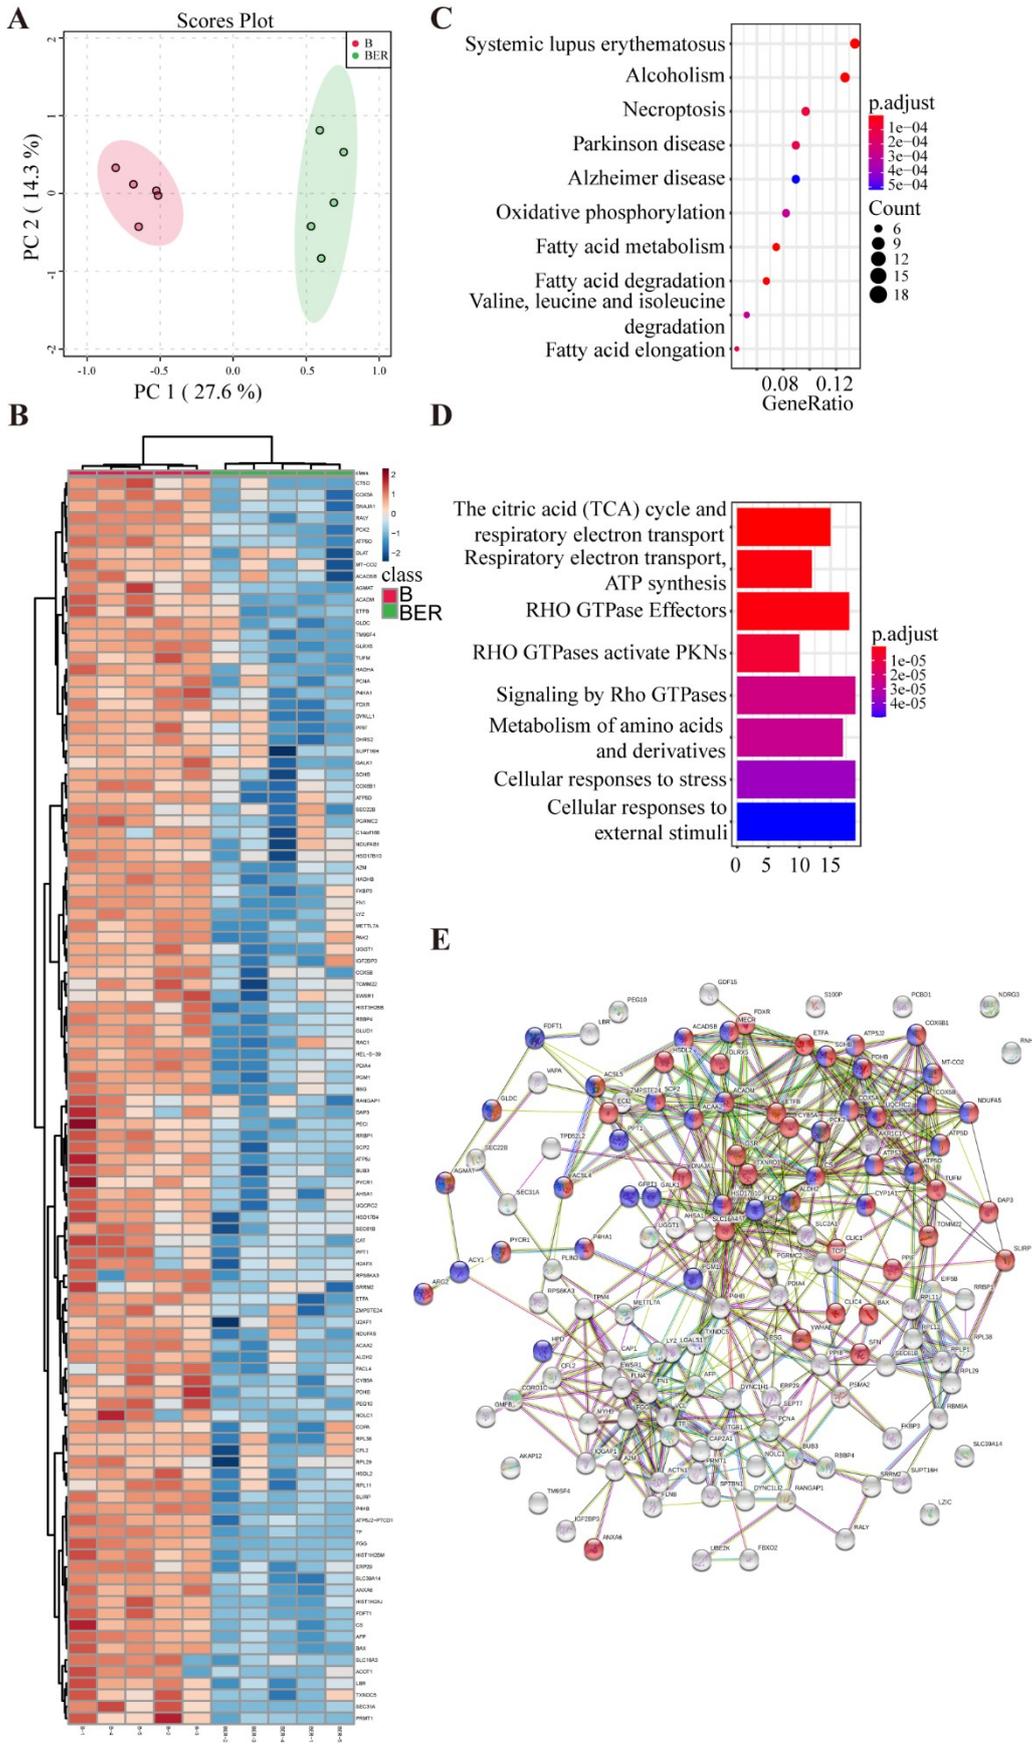

Fig. S1. (A) Principal component analysis plot illustrating the sample distribution of

blank control (B, red) and berberine-treated (BER, green) group. (B) Heatmap of all downregulated proteins. (C) Top 10 significant enriched KEGG pathways and (D) top 8 enriched Reactome pathways. (E) Protein-protein interaction network of altered proteins assessed with the STRING database. Proteins labeled in red and blue color were enriched in the mitochondria and metabolism pathways.

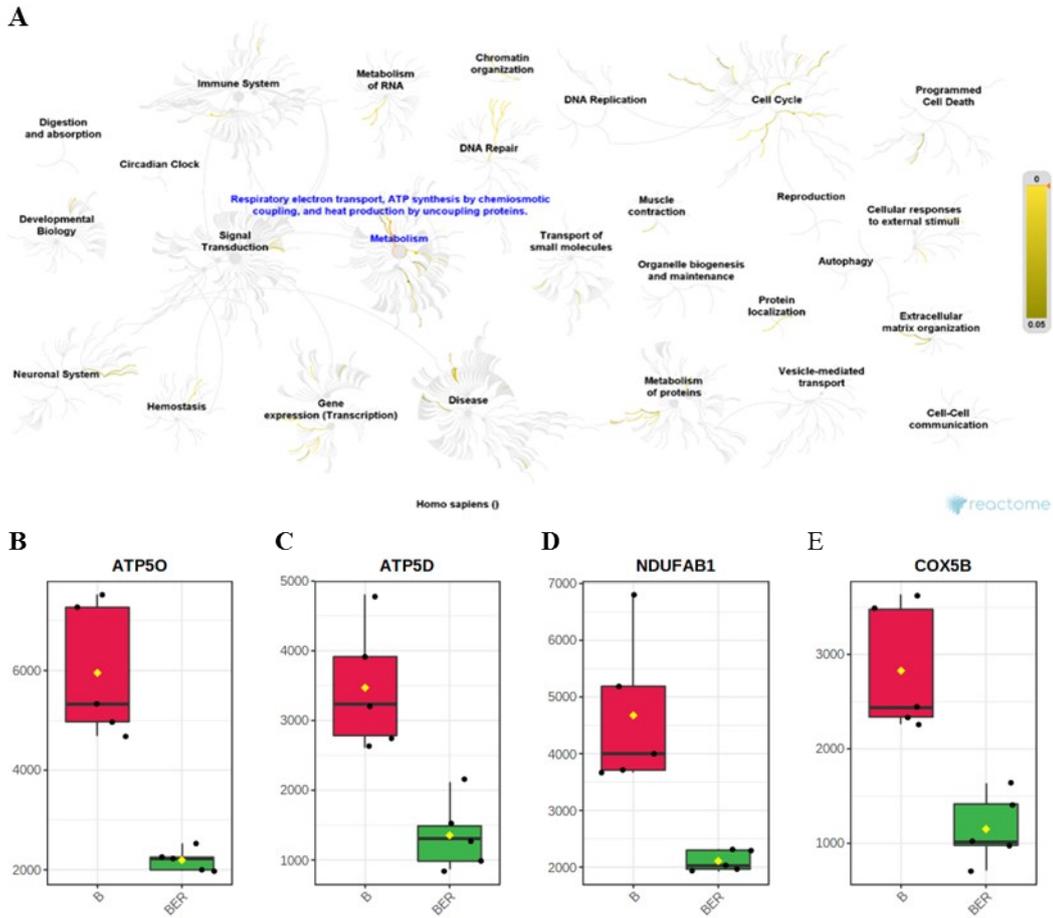

Fig. S2. (A) Overrepresented pathways from REACTOME pathway analysis of the altered proteins. Expression of mitochondrial dysfunction-mediated protein, including (B) ATP5O, (C) ATP5D, (D) NDUFAB1, (E) COX5B. ATP5O, ATP synthase subunit O; ATP5D, ATP synthase subunit delta; NDUFAB1, NADH dehydrogenase (ubiquinone) 1 beta subcomplex; COX5B, Cytochrome c oxidase subunit 5B.

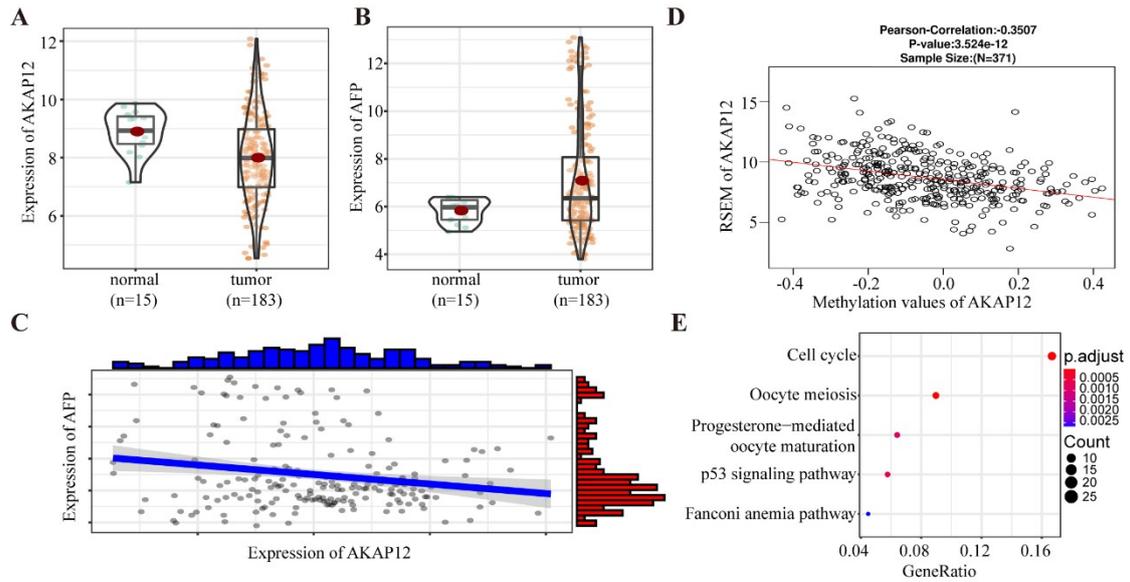

Fig. S3. (A, B) Box plots of AKAP12 expression ($p \leq 0.001$) and AFP expression ($p \leq 0.001$) in normal and tumor samples from GSE112790 dataset. (C) Correlation analysis between expression levels of AKAP12 and AFP ($p = 0.005$, $r = -0.2$). (D) Spearman correlation analysis of the expression of AKAP12 and its methylation levels using LinkedOmics. (E) Dot plot of the enriched GO terms using the upregulated genes obtained from TCGA LIHC dataset.

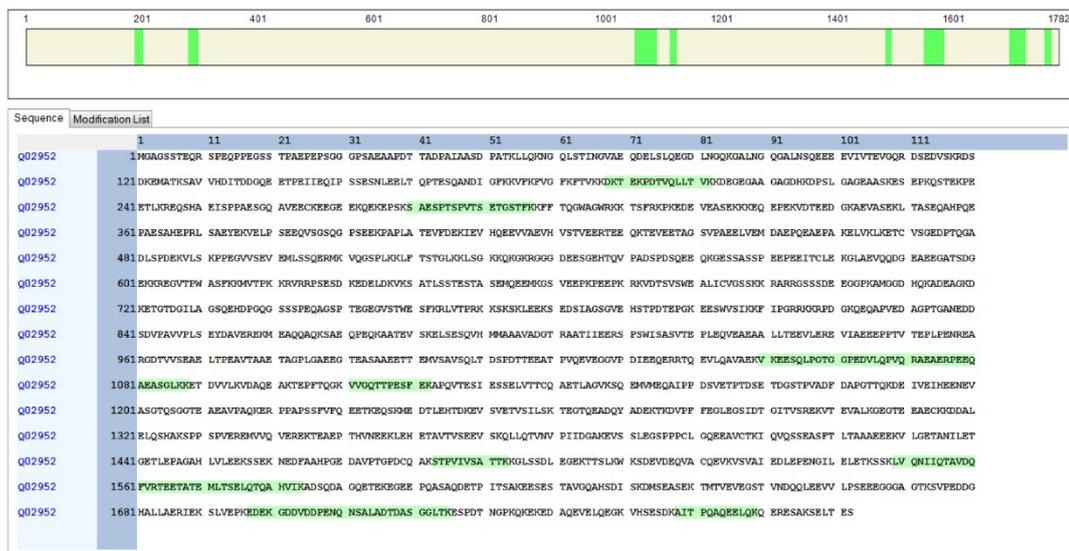

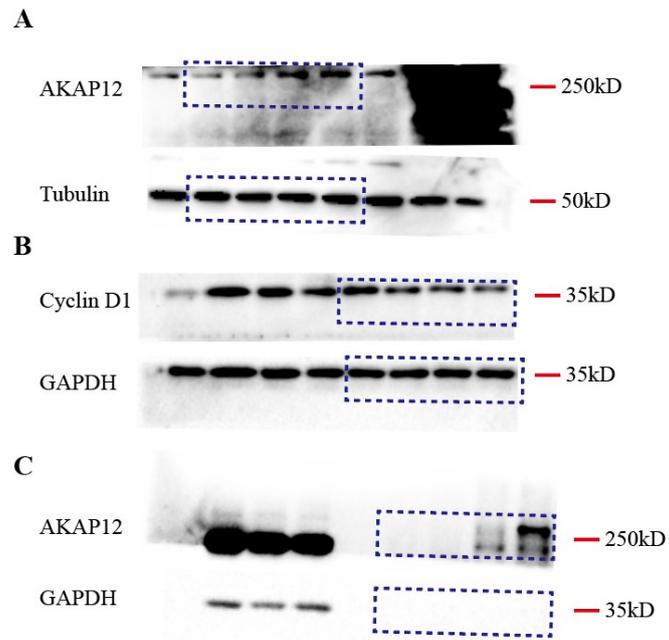

Fig. S4. The protein-sequence coverage of AKAP12 observed using Proteome Discoverer software (version 2.3.0).

Images in support of the representative western blots data shown in Figure 6. (A, B) Western blot analysis of AKAP12 and Cyclin D1 expression. (C) Co-immunoprecipitation of AKAP12 and Cyclin D1 was visualized using immunoblots.

Table S1. The hub target proteins of berberine (ranked according to Clustering Coefficient).
