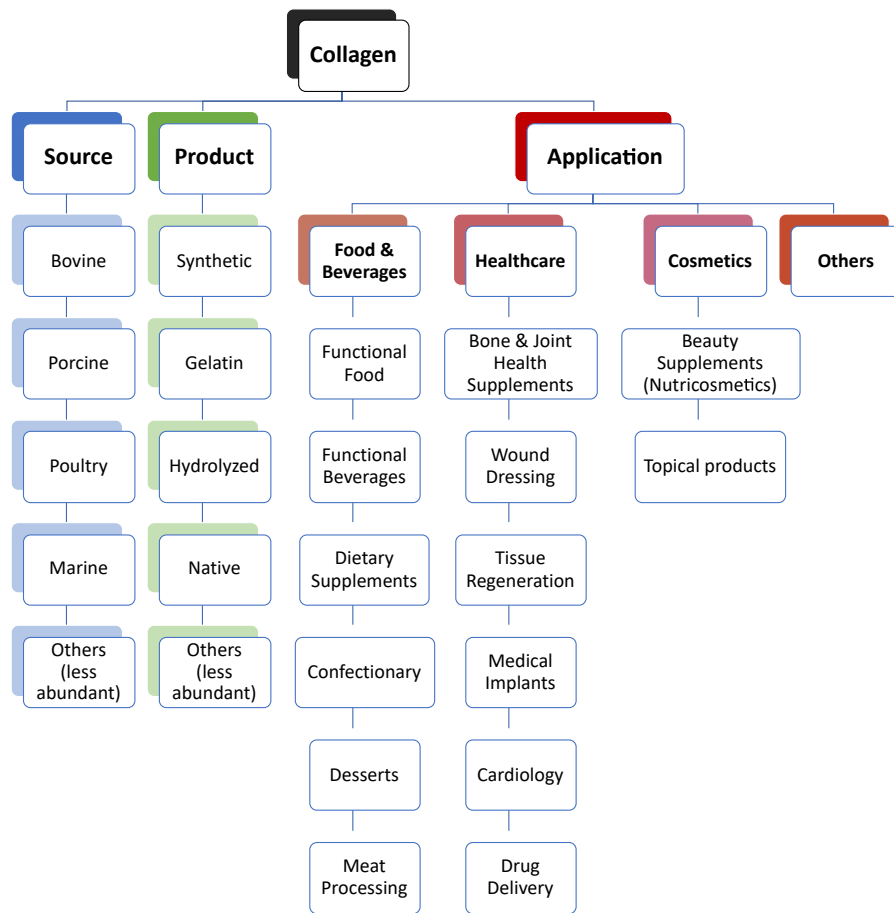

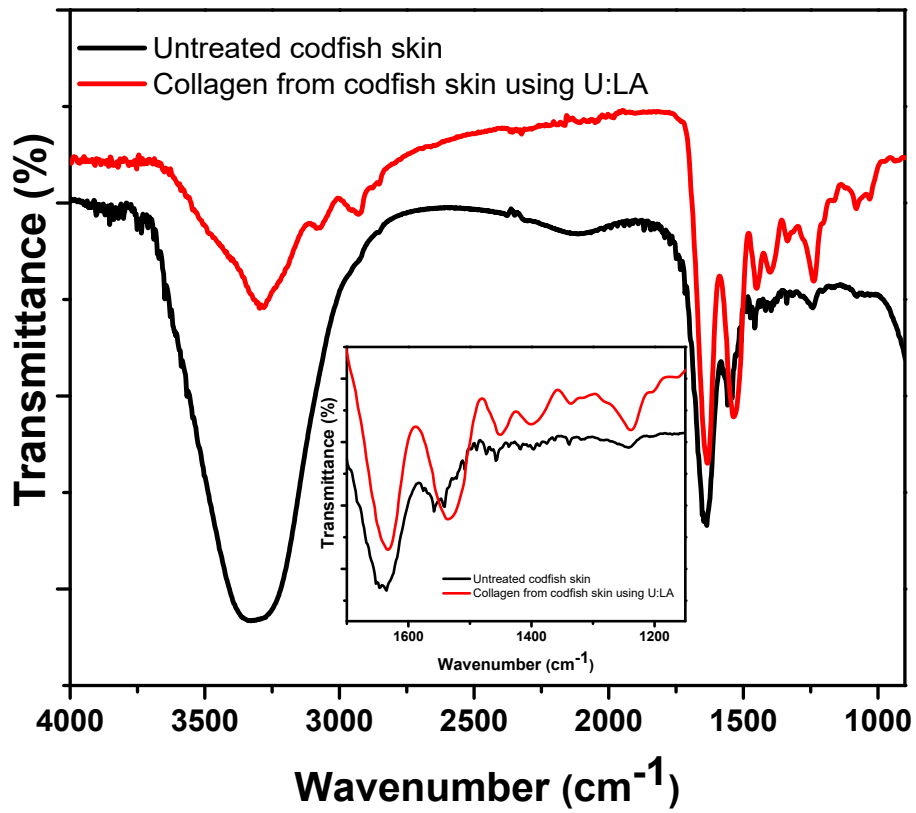

Fig. S1 Brief summary of sources, products and applications of collagen.

**Fig. S2.** Photographs showing the extraction of collagen type I from codfish skins using the conventional method with an aqueous solution of acetic acid.

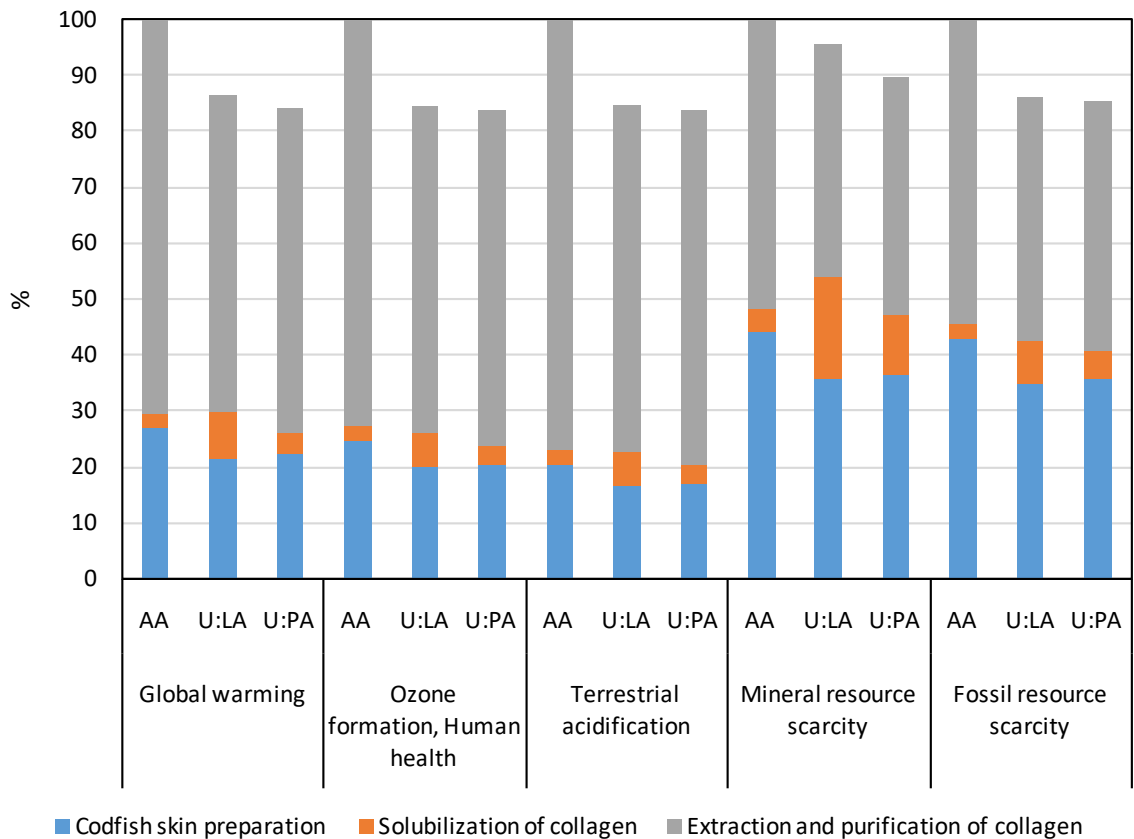

**Fig. S3.** Yield of extraction of collagen at 4 °C obtained by applying aqueous solutions of AA, LA, U and their corresponding eutectic mixtures at 0.5 M.

**Fig. S4:** FTIR spectra of untreated cod fish (raw cod fish skin) and collagen type I extracted from codfish skin using an aqueous solution of U:LA (1:2)

**Fig. S5:** DSC thermograms of collagen type I extracted from codfish skin using an aqueous solution of U:LA (1:2).

**Fig. S6** LCA results: relative contribution of each step of the process to the total impacts for obtaining 1 g of collagen in the three systems evaluated with LCA: with AA (conventional solvent), U:LA (1:2) and U:PA (1:2). 100% was assigned to the system with the largest result in each impact category.

**Table S1.** Supplier, purity and water content (wt%) of the starting materials used in the preparation of acidic DES.

| Compound           | Supplier       | Purity <sup>a</sup> (%) | Water Content (wt%) |
|--------------------|----------------|-------------------------|---------------------|
| Betaine            | Acros Organics | 98                      | 1.3 ± 0.1           |
| Urea               | Panreac        | > 99                    | 0.0030 ± 0.0001     |
| Cholinium chloride | Sigma          | > 98                    | 2.1 ± 0.4           |
| Formic acid        | Panreac        | 98                      | 1.12 ± 0.08         |
| DL-Lactic acid     | Riedel de Haën | 88-92                   | 14.60 ± 0.05        |
| Acetic acid        | Fisher         | 99                      | 0.10 ± 0.02         |
| Propionic acid     | Merck          | > 99                    | 0.09 ± 0.01         |

<sup>a</sup>as reported by the supplier.

**Table S2.** Inputs of chemicals, water and electricity for obtaining 1 g of collagen in the three systems evaluated with LCA: with AA, U:LA (1:2) and U:PA (1:2).

|   | Acetic acid | U:LA    | U:PA    |
|---|-------------|---------|---------|
| <b>Codfish skin preparation</b>               |             |         |         |
| Sodium hydroxide (g)                          | 8.33        | 6.73    | 6.89    |
| Butyl alcohol solution (L)                    | 1.83        | 1.48    | 1.52    |
| Water (mL)                                    | 8.33        | 6.73    | 6.89    |
| Electricity (W.h)                             | 0.85        | 0.69    | 0.70    |
| <b>Solubilization of collagen</b>             |             |         |         |
| Acetic acid (g)                               | 7.14        | -       | -       |
| Urea (g)                                      | -           | 5.77    | 5.91    |
| Lactic acid (g)                               | -           | 17.31   | -       |
| Propanoic acid (g)                            | -           | -       | 14.57   |
| Water (mL)                                    | 230.95      | 169.23  | 176.38  |
| Electricity (W.h)                             | 67.05       | 54.15   | 55.43   |
| <b>Extaction and purification of collagen</b> |             |         |         |
| Sodium chloride (g)                           | 36.19       | 29.23   | 29.92   |
| Water (mL)                                    | 21.43       | 17.31   | 17.72   |
| Electricity (W.h)                             | 2503.97     | 2022.44 | 2070.21 |

**Table S3.** pH of aqueous solutions of acetic acid and DES at 0.5 M.

| <b>Solvents</b> | <b>pH</b> |
|-----------------|-----------|
| Acetic acid     | 2.564     |
| CC:U (1:2)      | 7.760     |
| CC:FA (1:2)     | 1.521     |
| CC:AA (1:2)     | 2.012     |
| CC:PA (1:2)     | 2.054     |
| CC:LA (1:2)     | 1.471     |
| Bet:FA (1:2)    | 2.604     |
| Bet:AA (1:2)    | 3.109     |
| Bet:PA (1:2)    | 3.242     |
| Bet:LA (1:2)    | 2.224     |
| U:FA (1:4)      | 1.640     |
| U:AA (1:5)      | 2.244     |
| U:PA (1:2)      | 2.480     |
| U:LA (1:2)      | 2.114     |

**Table S4.** The absorption ratio between the 1240 and 1450  $\text{cm}^{-1}$  bands.

| <b>Collagen sample</b> | <b>A1240</b> | <b>A1450</b> | <b>Ratio</b> |
|------------------------|--------------|--------------|--------------|
| Commercial collagen    | 0.355258     | 0.347228     | 1.023128     |
| AA                     | 0.252945     | 0.248312     | 1.018657     |
| CC:PA (1:2)            | 0.159459     | 0.159787     | 0.997949     |
| CC:LA (1:2)            | 0.149954     | 0.162049     | 0.925362     |
| Bet:AA (1:2)           | 0.217435     | 0.235039     | 0.9251       |
| Bet:PA (1:2)           | 0.252868     | 0.251088     | 1.007089     |
| U:PA (1:2)             | 0.142611     | 0.149527     | 0.953747     |
| U:LA (1:2)             | 0.125417     | 0.12389      | 1.01232      |

**Table S5.** LCA results: total impacts for obtaining 1 g of collagen in the three systems evaluated with LCA: with acetic acid, U:LA (1:2) and U:PA (1:2).

| <b>Impact category</b>                               | <b>Acetic acid</b> | <b>U:LA</b> | <b>U:PA</b> |
|--|--------------------|-------------|-------------|
| Global warming (kg CO <sub>2</sub> eq)               | 1.18               | 1.03        | 1.00        |
| Ozone formation, human health (g NO <sub>x</sub> eq) | 2.53               | 2.15        | 2.13        |
| Terrestrial acidification (g SO <sub>2</sub> eq)     | 4.65               | 3.94        | 3.90        |
| Mineral resource scarcity (g Cu eq)                  | 0.111              | 0.107       | 0.100       |
| Fossil resource scarcity (kg oil eq)                 | 0.490              | 0.423       | 0.420       |
