1. Dynamic responses of PVAc/CA nanofiber sensors

\begin{figure}
\centering
\includegraphics[width=\textwidth]{FigureS1.png}
\caption{Single-cycle dynamic responses of three quartz crystal microbalance (QCM)-based gas sensors functionalized with different citric acid-doped polyvinyl acetate nanofibrous (PVAc/CA) mats: a PVAc/CA2, b PVAc/CA6, and c PVAc/CA8. Trimethylamine (TMA) vapors with a concentration of 10 ppm were used to investigate the response and recovery times of all nanofiber sensors.}
\end{figure}
2. Normalized sensor sensitivity

Figure S2 Normalized sensitivity values of four PVAc/CA nanofiber-coated QCM sensors (i.e., PVAc/CA2 – PVAc/CA8 sensors). The normalization process was conducted to investigate the nanofiber mass deposition effect on the sensor sensitivity.
