

Supplementary Figures

Figure S1

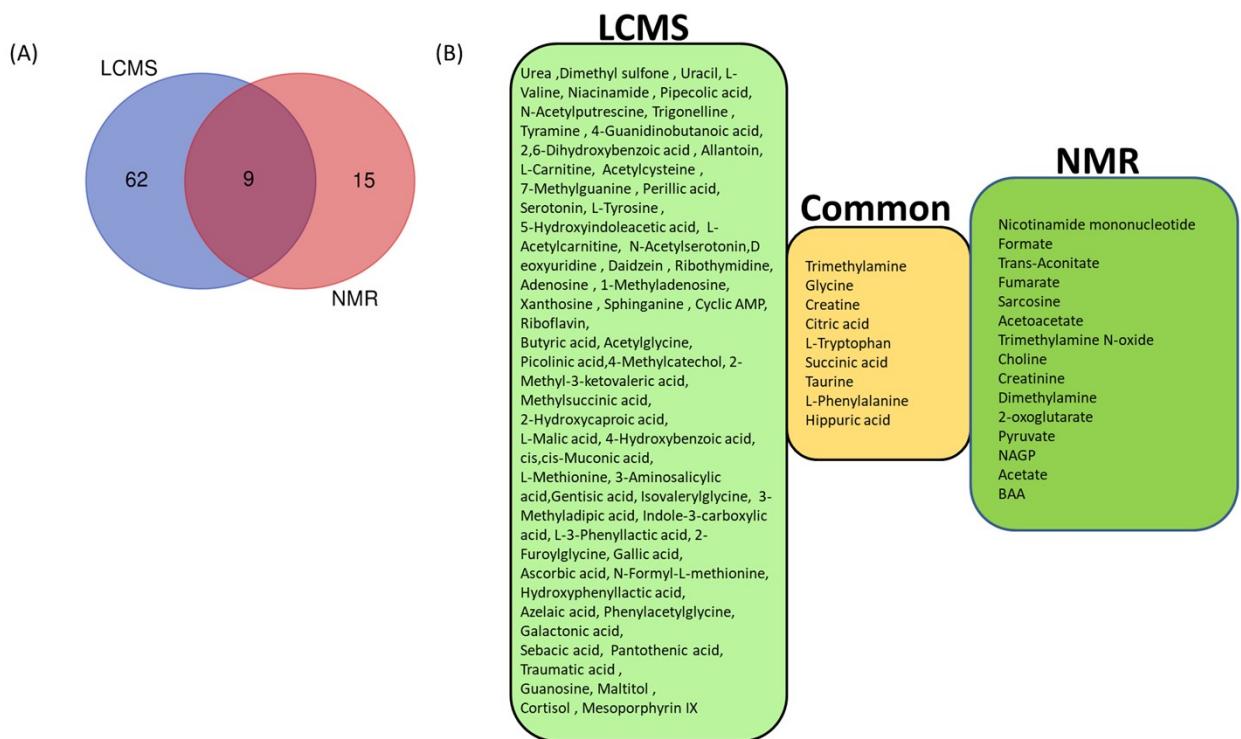

Figure S1: Venn diagram showing (A) metabolite numbers and (B) metabolite names identified using LC-MS and NMR techniques.

Figure S2

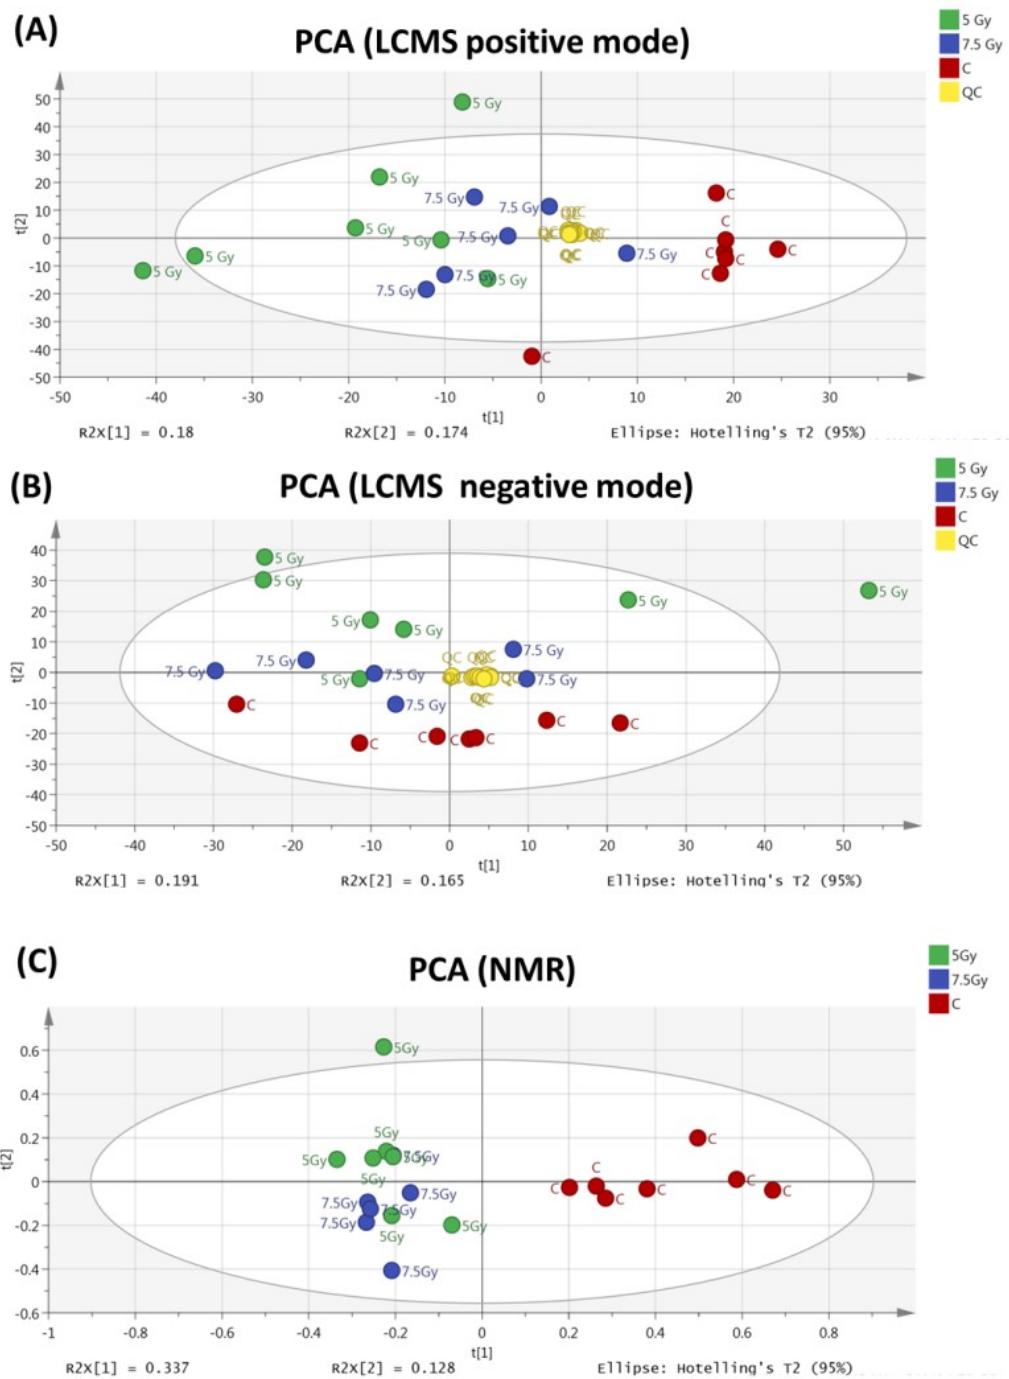

Figure S2: PCA score plot of m/z peaks in: (A) Positive mode, (B) Negative mode generated from LC-MS and (C) bins generated from NMR analysis in urine sample of control vs. irradiated.

(Quality control samples (QC): Yellow color; Control (C): Red; 5 Gy group: Green and 7.5 Gy group: Blue).

Figure S3

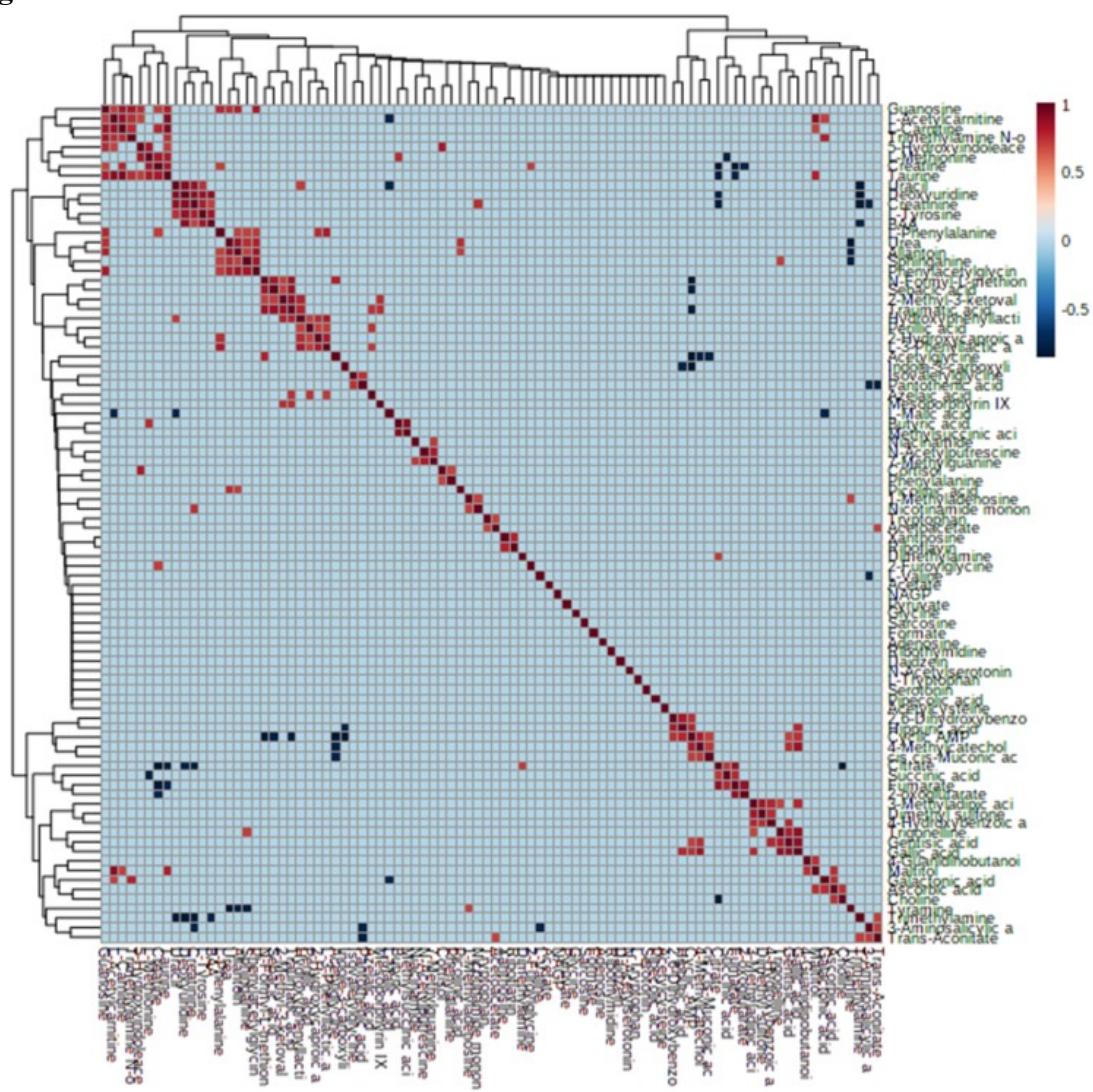

Figure S3: Heat map showing the correlation analysis of metabolites with correlation value >0.7 and <-0.7 in 7.5 Gy radiation group.

The color bar shows the absolute values of the correlation coefficients.

Figure S4

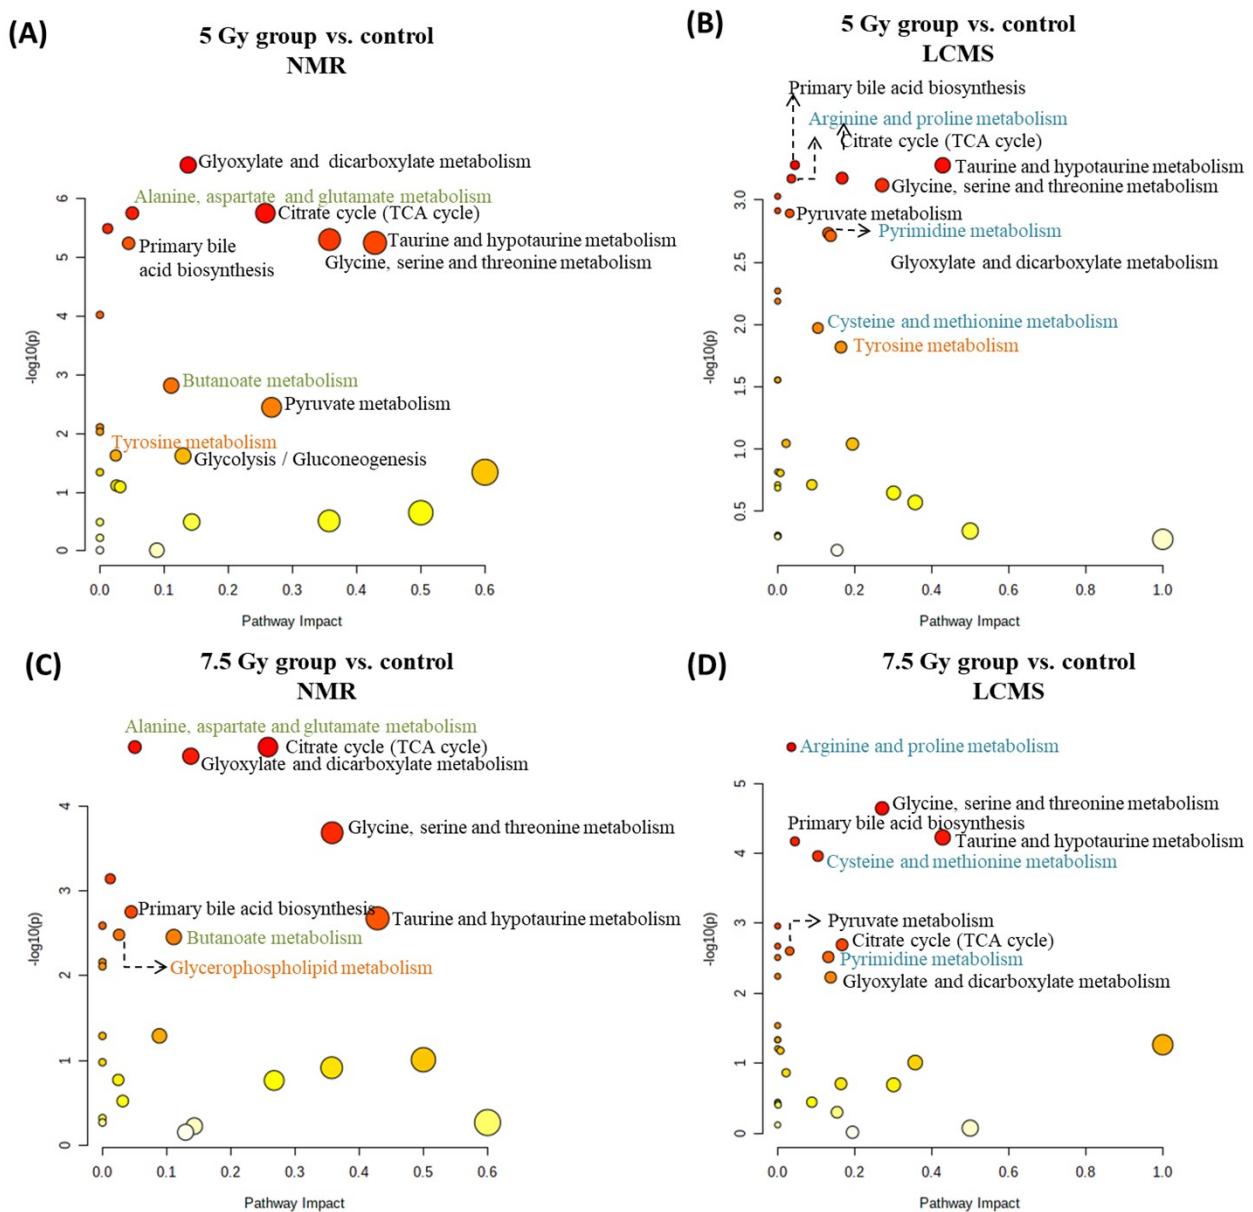

Figure S4: Dysregulated metabolic pathways based on individual pathway analysis of NMR and LC-MS data post radiation exposure.

(Pathways font color; Black: present in both NMR and LC-MS; Green: present only in NMR; Blue: present in LC-MS alone; Orange; unique to 5 Gy and 7.5 Gy dose group).

Figure S5

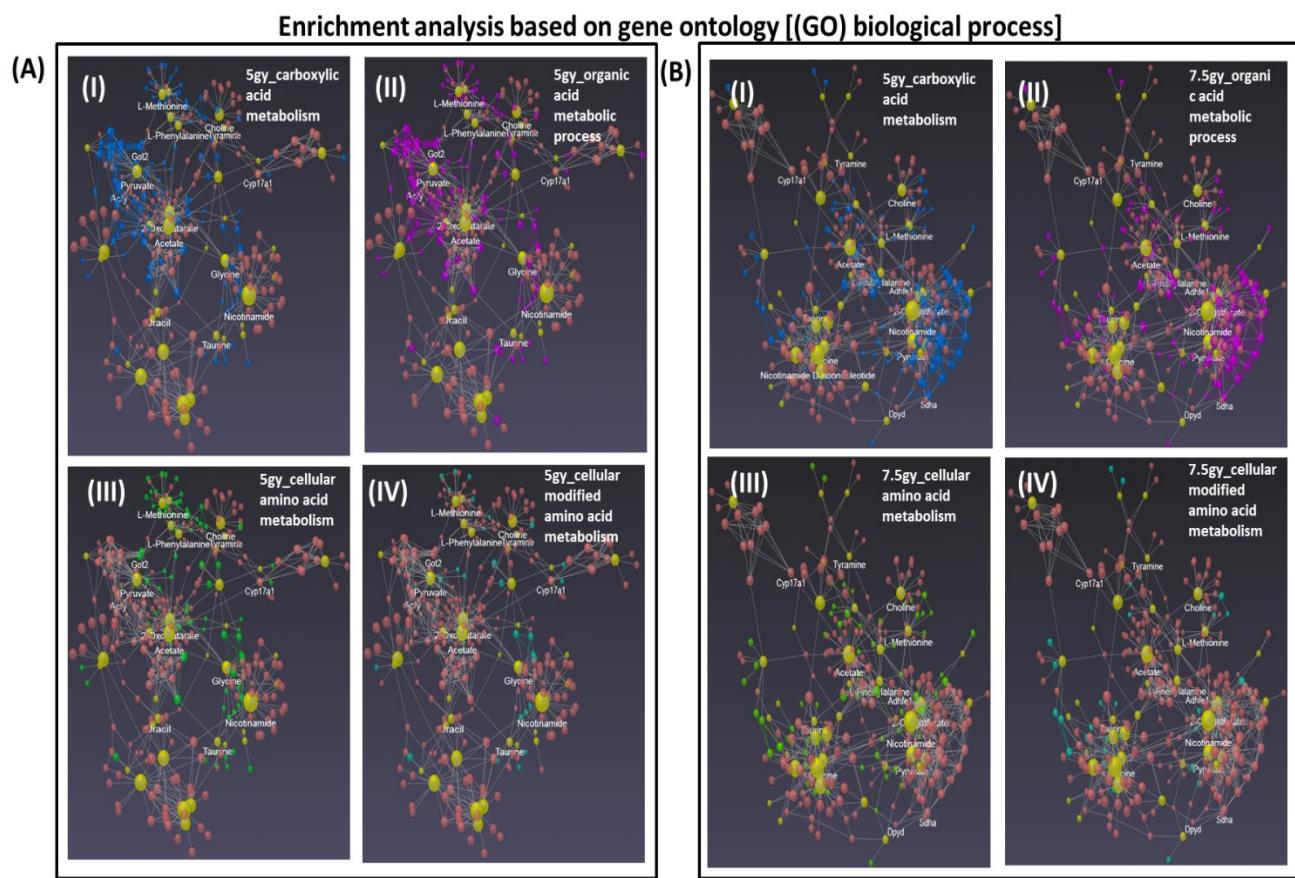

Figure S5: Functional pathway enrichment analysis based on gene ontology (GO) biological process of (A) 5 Gy and (B) 7.5 Gy radiation dose groups by OmicsNet.
 (Query molecules:-yellow, edges:-grey color, nodes:-Peach and Query pathway network; (I) nodes-blue; (II) nodes-pink; (III) nodes-green; (IV) nodes-Turquoise).

Figure S6

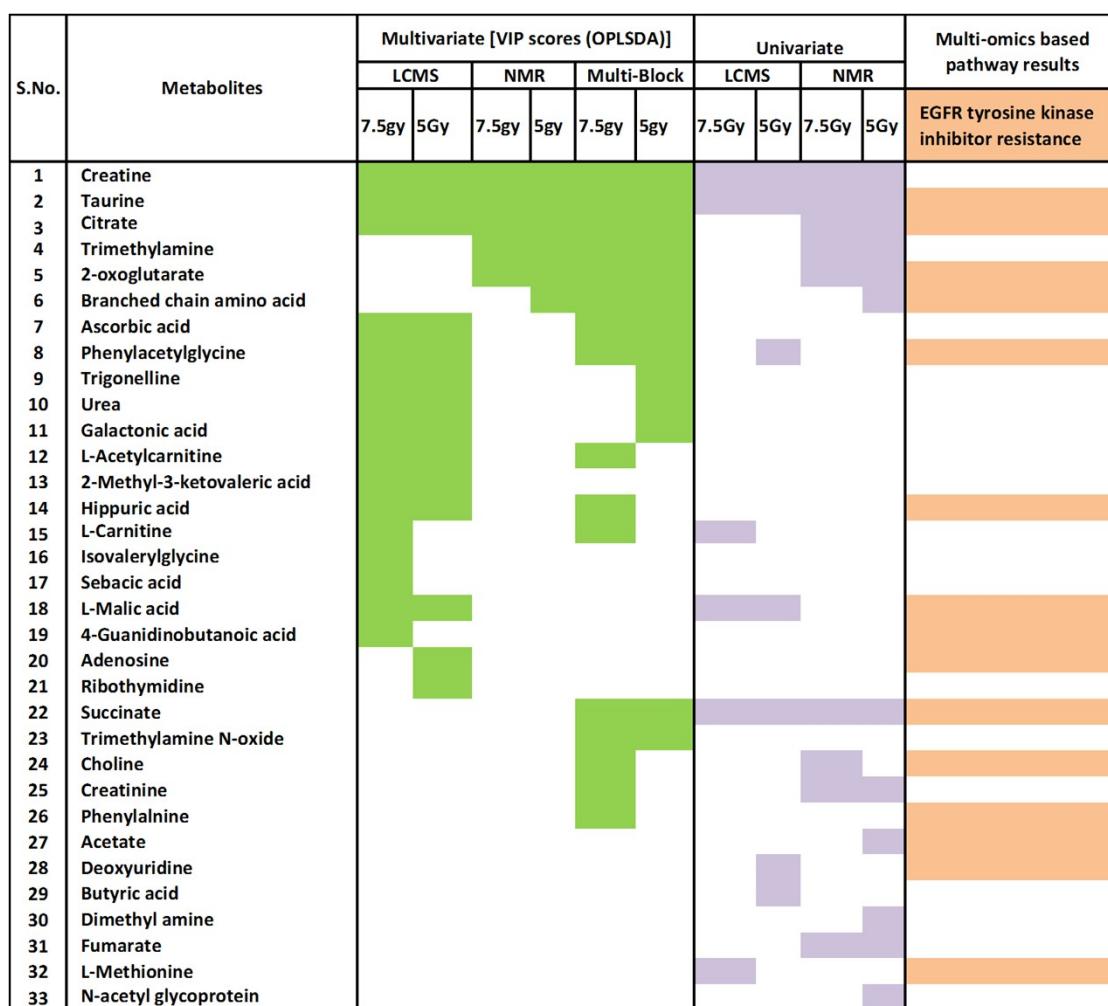

Figure S6: Overlapping significant metabolites with multi-omics based EGFR tyrosine kinase inhibitor (TKI) resistance pathway.

(Orange: Metabolites overlapping with EGFR tyrosine kinase inhibitor resistance pathway; Green: metabolites having VIP score >1; Purple: FDR corrected (p-values <0.05) metabolites in univariate analysis).

Table S1: Tabular representation of perturbed pathways post irradiation.

5 Gy vs. control							
Pathways	Total Cmpd	Hits	Raw p	-log10(p)	Holm adjust	FDR	Impact
