General Information

¹H and ¹³C NMR spectra were recorded on a Bruker advance III 400 spectrometer in CDCl₃ with TMS as internal standard. Mass spectra were determined on a Hewlett Packard 5988A spectrometer by direct inlet at 70 eV. High-resolution mass spectral analysis (HRMS) data were measured on a Bruker Apex II. All products were identified by ¹H and ¹³C NMR, MS, HRMS. The starting materials were purchased from Aldrich, Energy Chemical, Acros Organics, J&K Chemicals or TCI and used without further purification.

Typical procedure

A mixture of 4-methylquinoline (1 equiv., 0.2 mmol), Fe(acac)₃ (3%, 0.006 mmol), TBHP (2 equiv., 0.4 mmol), acetic acid (2.0 equiv., 0.4 mmol) and methanol (2 mL) was heated at 110°C for 9 h. After the reaction finished, the mixture was evaporated under vacuum and purified by column chromatography to afford the desired product.

The modification of the reaction condition

Substrate: 0.2 mmol (1 equiv.);
TBHP: *t*-BuOOH; DTBP: (*t*-BuO)₂

Entry	Methanol (mL)	Initiator (equiv.)	Catalyst (mol %)	T (°C)	Time (h)	Yield (%)
1	2	TBHP (2)	Fe(acac) ₃ (3)	80	9	NR
2	2	TBHP (2)	Fe(acac) ₃ (3)	90	9	16
3	2	TBHP (2)	Fe(acac) ₃ (3)	100	9	47

Physical data and references for the following products

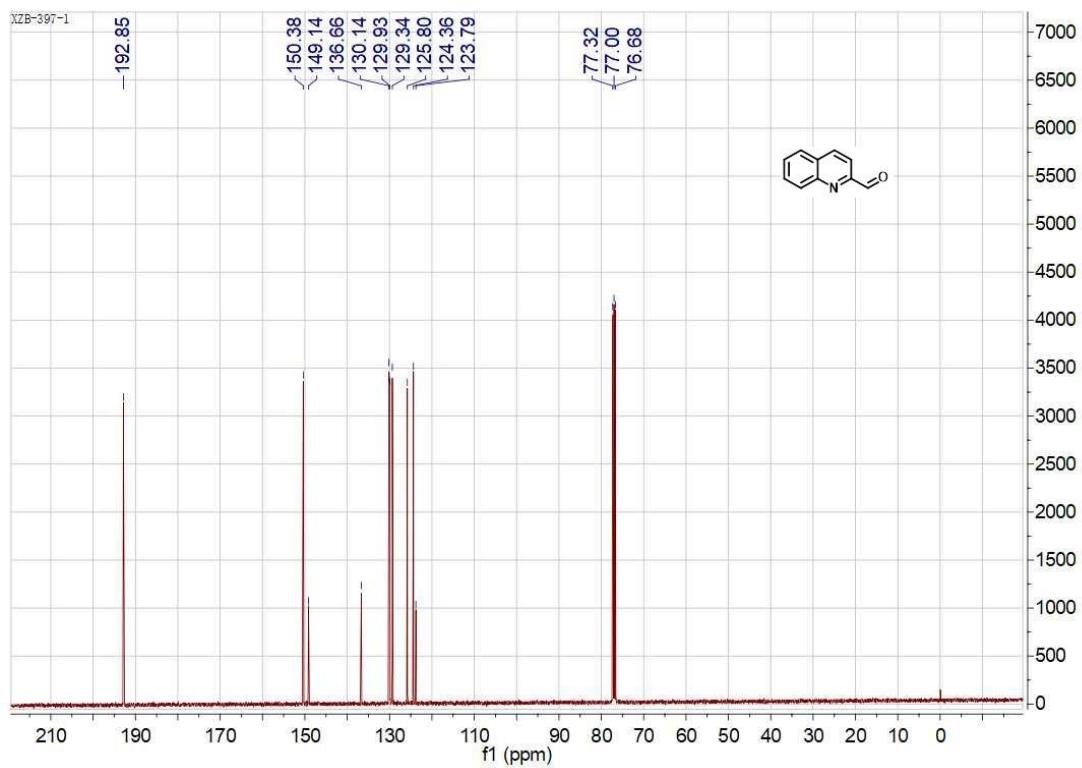

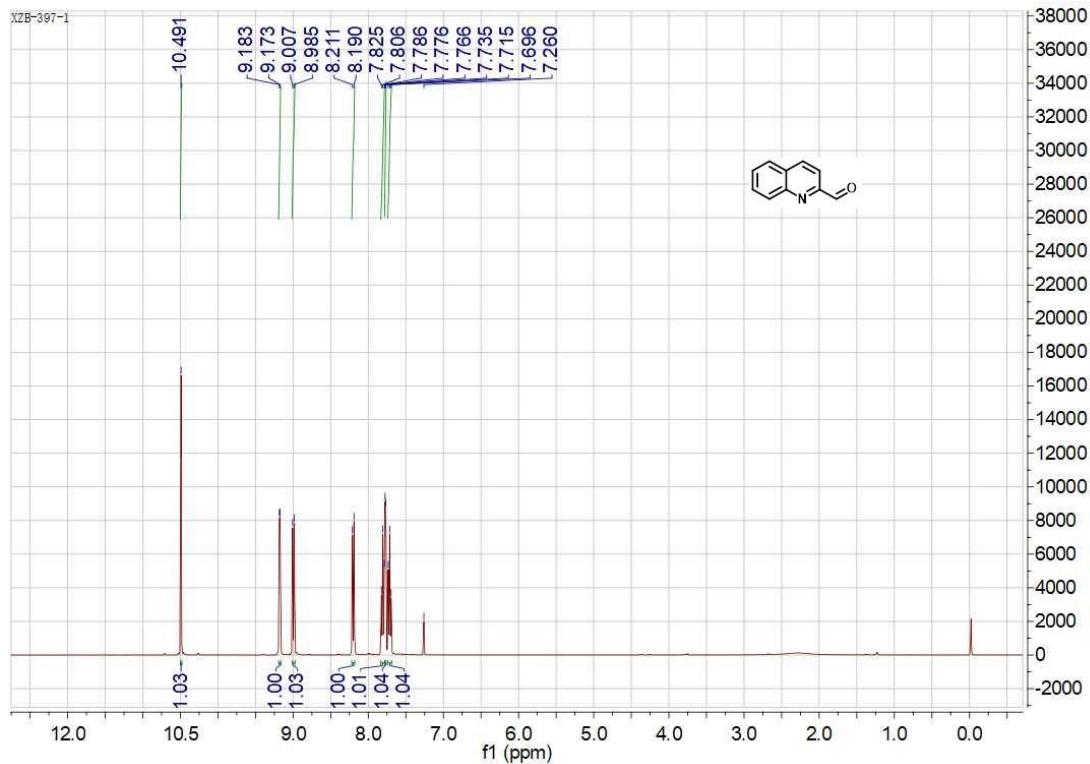

All known compounds are determined by ¹H NMR and ¹³C NMR, MS analysis and compared with which were cited in the following references^[1-4] and the new compounds were further confirmed by HRMS.
