

Supporting Figure 1 | Agar plate herbicidal activity of antimalarial compounds. (A) Activity of the MMV400 against *A. thaliana* at 80 μ M. Orange circles indicate the compounds active against soil-grown plants, red circles indicate plate-only active compounds, blue circles denote plate-active compounds that were not tested for activity against soil-grown plants; (B) Positive controls at 80 μ M, DHA – dihydroartemisinin, DMSO was used as a negative control at 1% (vol) concentration.
