^a Extrapolated data of the temperature function $\Delta_f G_m^\circ$ (WB) at 1310 – 1399 K,³⁷ giving $U(\Delta_f G_m^\circ)$ of 4%.

^b Uncertainties of BO₂⁻(aq) were estimated to be equal to those of B(OH)₃(aq).

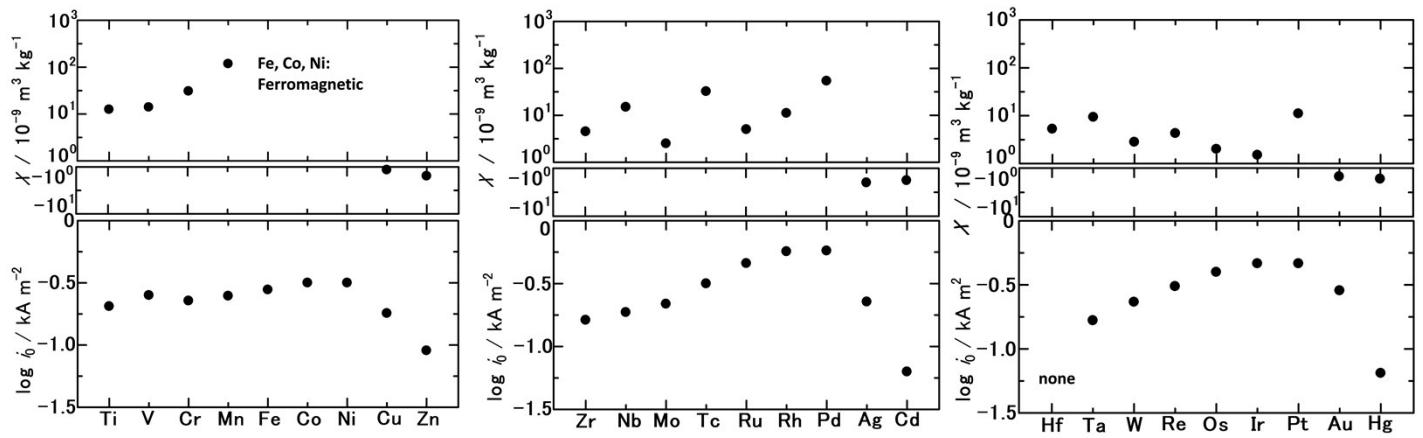

Fig. S4 Correlation between magnetic susceptibility, χ , and electrochemical HER current density i_0 determined by extrapolating the cathodic Tafel line to the reference hydrogen electrode (RHE) of the transition metals of the fourth, fifth and sixth periods.
