### NMR spectroscopy

Dianiline complexes and diimine complexes (10 mg) were dissolved in 1 cm<sup>3</sup> of DMSO-*d*<sup>6</sup> (a and b), methanol-*d*<sup>4</sup> (c) and nitromethane-*d*<sup>3</sup> (d and e), respectively. The solutions were transferred to a cell ( $\phi = 5$  mm) with simple filtration using a syringe equipped with a membrane filter. <sup>1</sup>H and <sup>13</sup>C NMR spectra were shown in Fig. S1 and S2.

### Oxidation of aniline complexes.

Oxidation reaction of *cis*-[Ru(NH<sub>2</sub>C<sub>6</sub>H<sub>4</sub>(4-CH<sub>3</sub>))<sub>2</sub>(bpy)<sub>2</sub>](CF<sub>3</sub>SO<sub>3</sub>)<sub>2</sub> [2](CF<sub>3</sub>SO<sub>3</sub>)<sub>2</sub> in H<sub>2</sub>O by four molar equivalents of oxidants ((NH<sub>4</sub>)<sub>4</sub>[Ce<sup>IV</sup>(SO<sub>4</sub>)<sub>4</sub>]·2H<sub>2</sub>O) were carried out (Fig. S11). The spectrum after 2 hours was consistent with that of *cis*-[Ru(NHC<sub>6</sub>H<sub>3</sub>(4-CH<sub>3</sub>)NC<sub>6</sub>H<sub>4</sub>(4-CH<sub>3</sub>))(bpy)<sub>2</sub>](PF<sub>6</sub>)<sub>2</sub> [5](PF<sub>6</sub>)<sub>2</sub>. The formation of [5]<sup>2+</sup> occurs more slowly than that of [4]<sup>2+</sup>. Assuming these oxidation reactions are pseudo-first-order reactions, the rate constants in the oxidation reaction of [1]<sup>2+</sup> and [2]<sup>2+</sup> were roughly estimated to 7×10<sup>-4</sup> and 3×10<sup>-4</sup>, respectively.

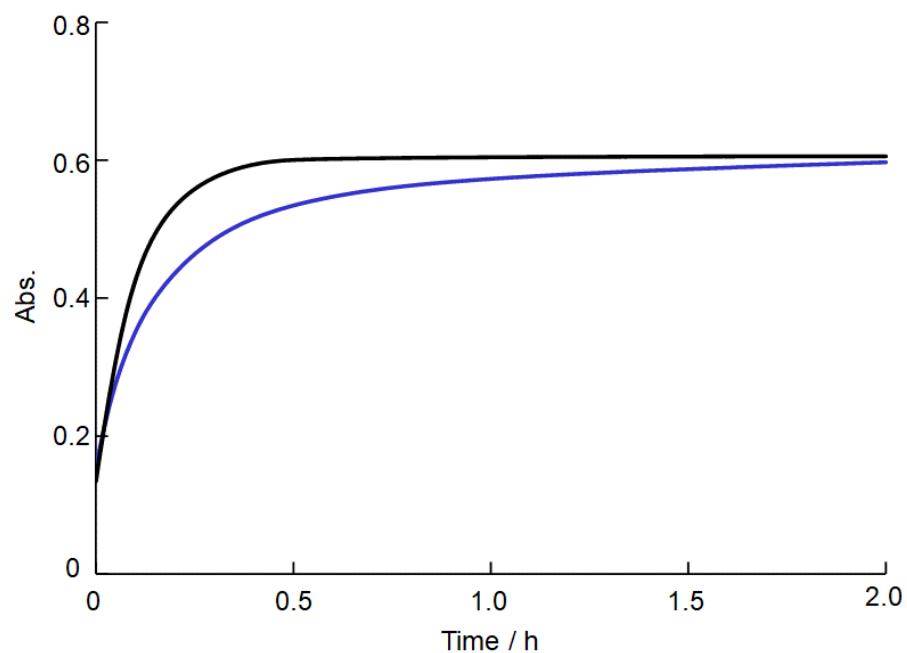

An oxidation reaction of *cis*-[Ru(NH<sub>2</sub>C<sub>6</sub>H<sub>5</sub>)<sub>2</sub>(bpy)<sub>2</sub>](CF<sub>3</sub>SO<sub>3</sub>)<sub>2</sub> [1](CF<sub>3</sub>SO<sub>3</sub>)<sub>2</sub> by four molar equivalents of oxidants in the presence of ten molar equivalents of radical scavengers (2,2,6,6-tetramethylpiperidine 1-oxyl) was carried out (Fig. S12). Changes in absorbances were observed during the oxidation reactions of *cis*-[Ru<sup>II</sup>(NH<sub>2</sub>C<sub>6</sub>H<sub>5</sub>)<sub>2</sub>(bpy)<sub>2</sub>](CF<sub>3</sub>SO<sub>3</sub>)<sub>2</sub> [1](CF<sub>3</sub>SO<sub>3</sub>)<sub>2</sub> (520 nm, black) and *cis*-[Ru(NH<sub>2</sub>C<sub>6</sub>H<sub>4</sub>(4-CH<sub>3</sub>))<sub>2</sub>(bpy)<sub>2</sub>](CF<sub>3</sub>SO<sub>3</sub>)<sub>2</sub> [2](CF<sub>3</sub>SO<sub>3</sub>)<sub>2</sub> (524 nm, blue) as shown in Fig. S13.
