## S-1. Purity analysis of PNA conjugates

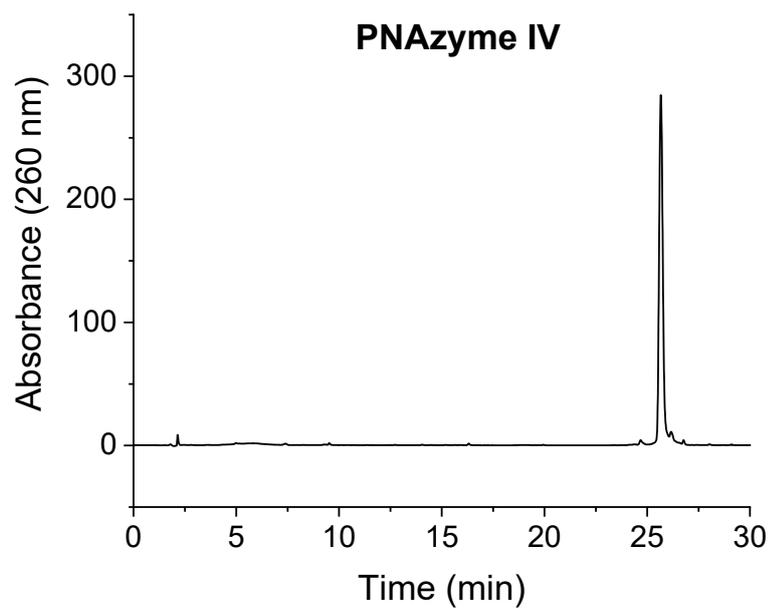

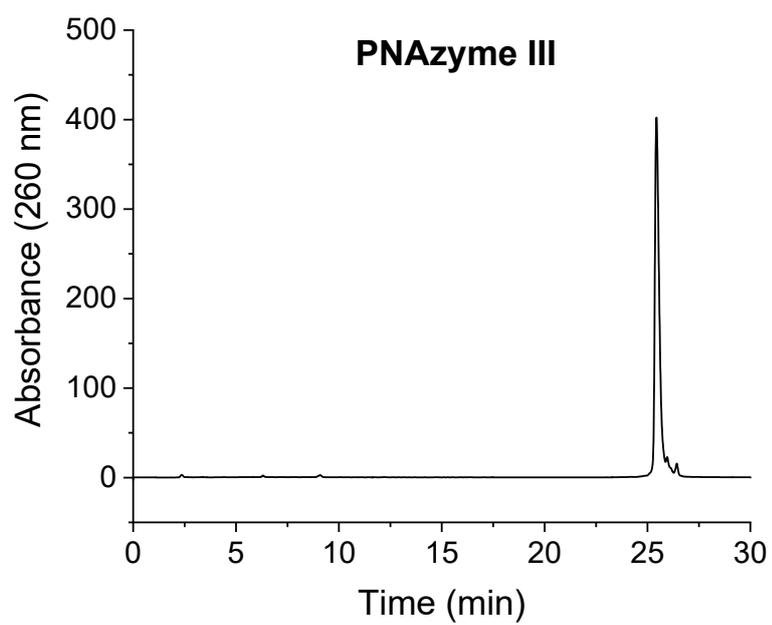

The PNA conjugate PNAzyme I has been previously described and the RP-HPLC chromatograms of the crude and pure conjugate have been published.<sup>1</sup> The retention time of unconjugated PNA is around 15 min.<sup>1</sup>

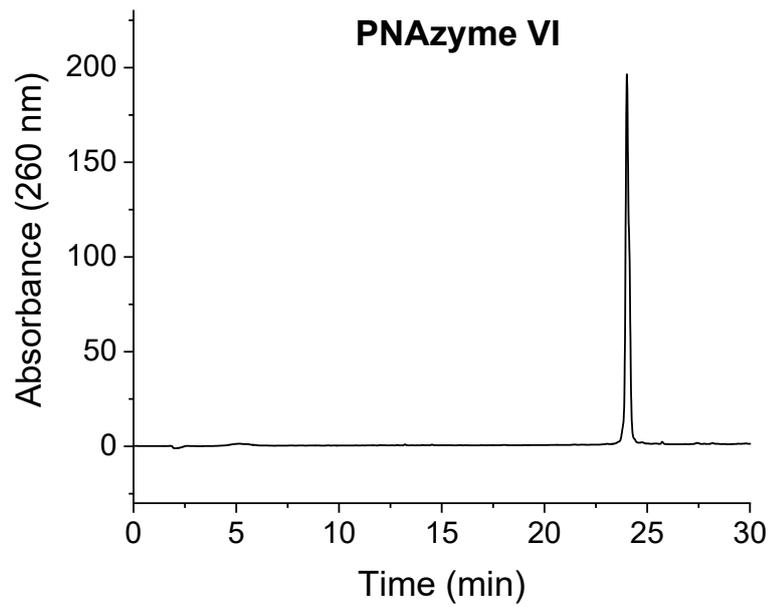

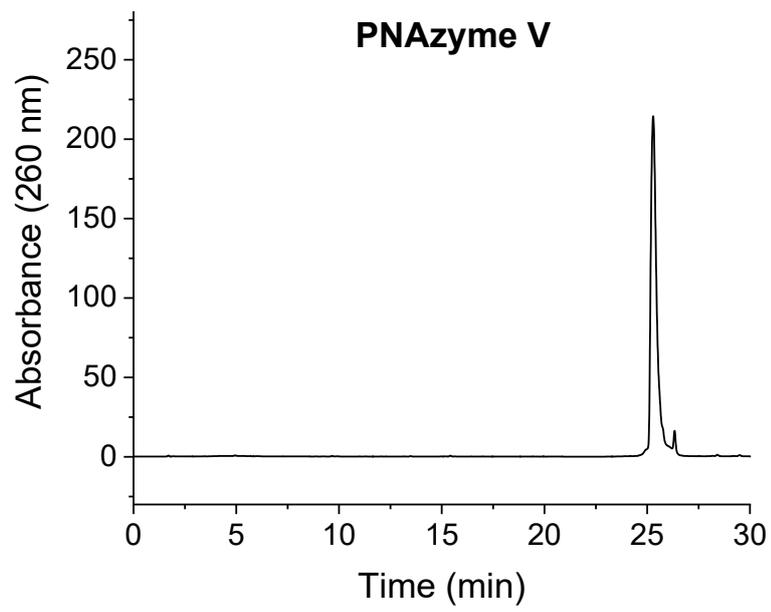

Representative RP-HPLC chromatogram of the crude PNAzyme II:

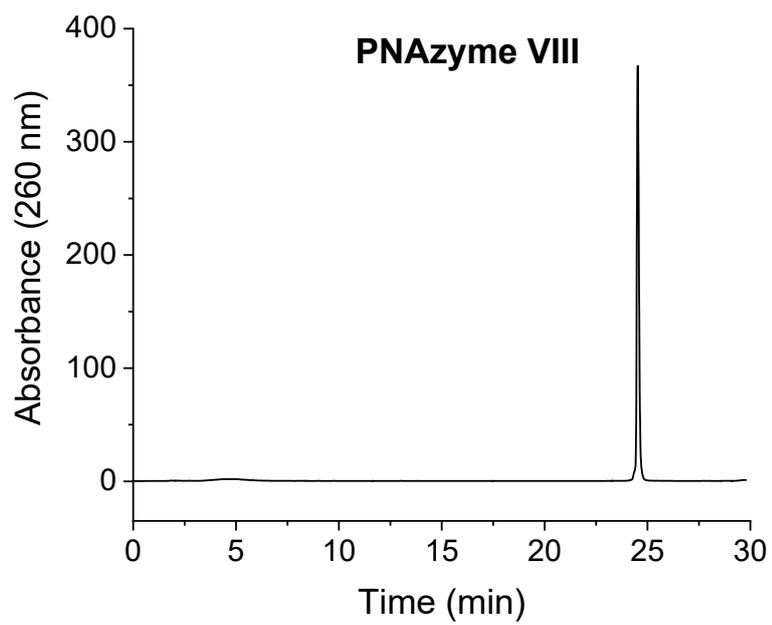

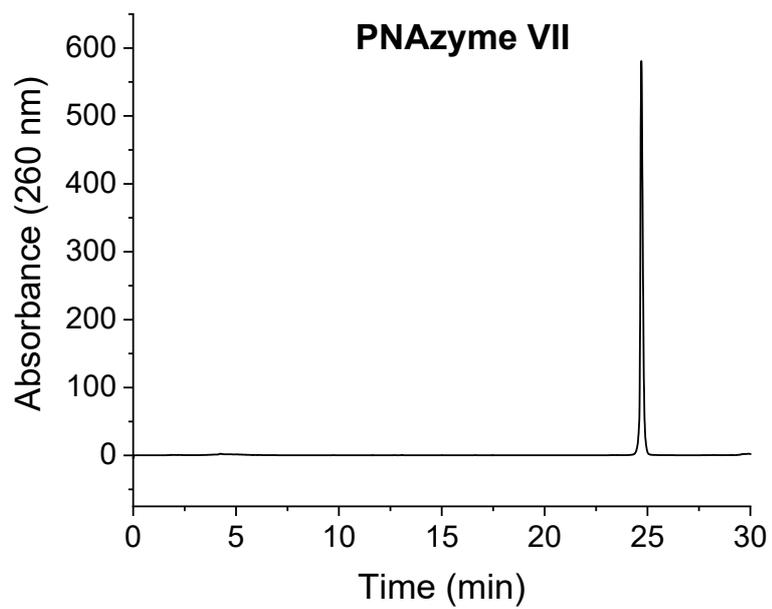

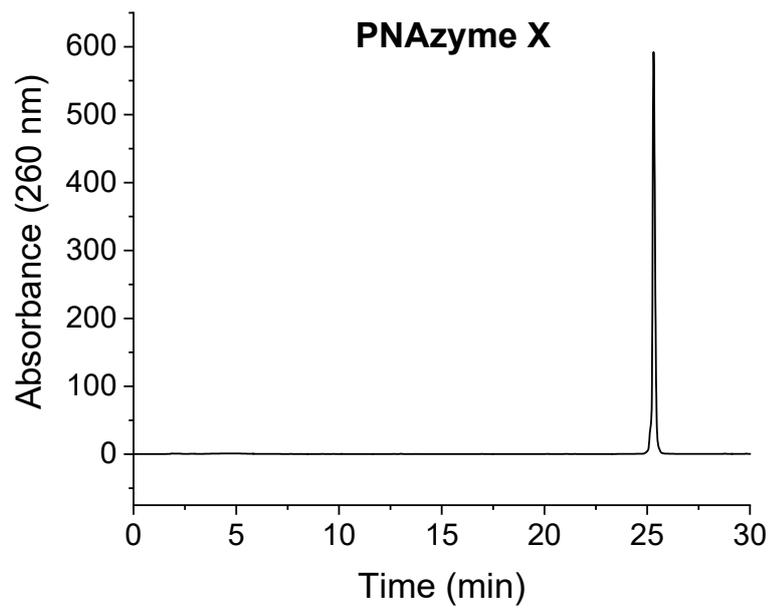

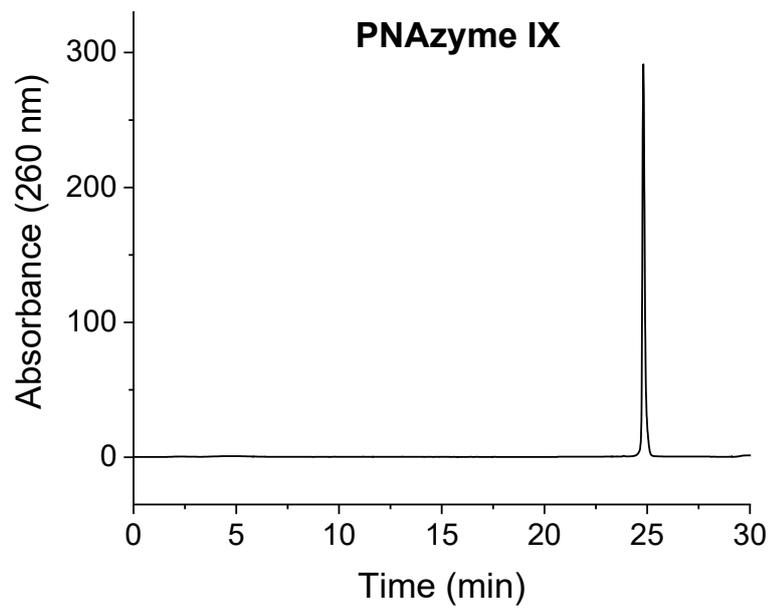

Purity analysis of purified PNA conjugates (PNAzymes II-XII):

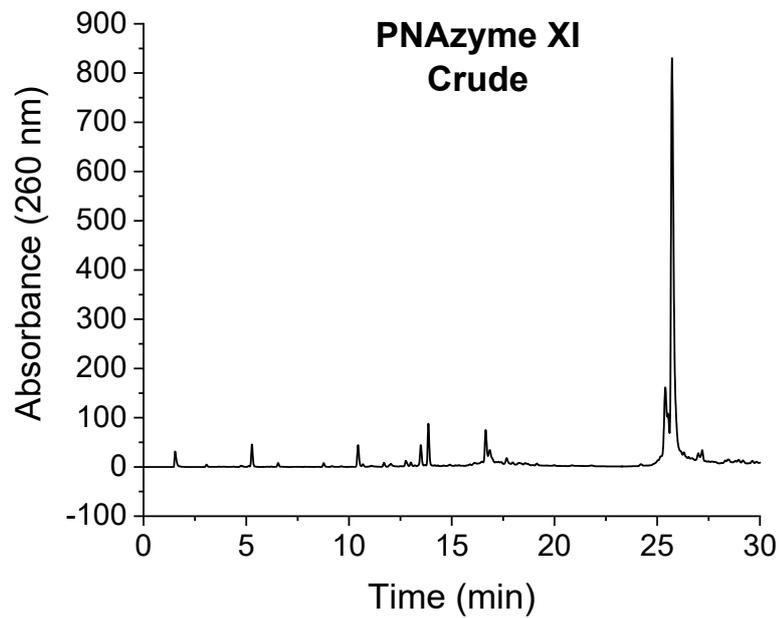

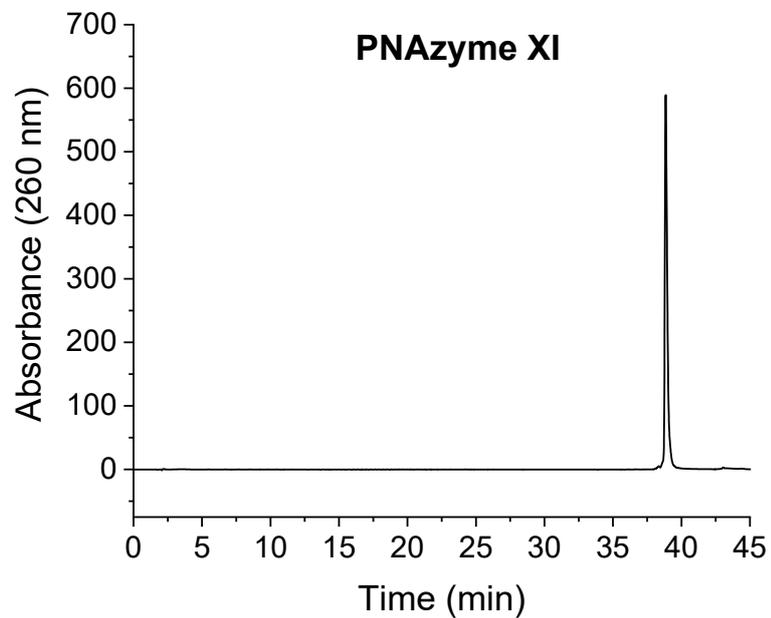

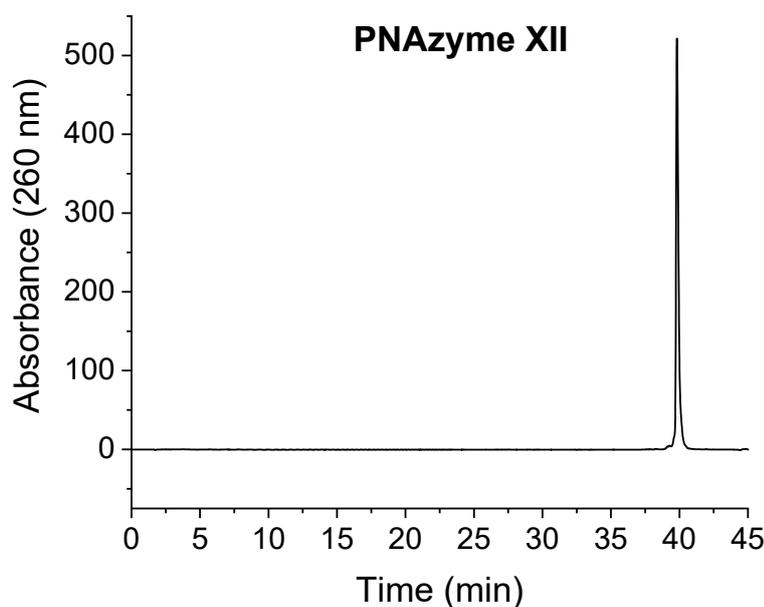

Representative RP-HPLC chromatogram of the crude PNAzyme XI:

Purity analysis of purified PNAzymes XI and XII was performed using an extended method (0 to 33% buffer B in 40 min as opposed to the standard method<sup>1</sup> where the gradient is 0 to 40% buffer B in 30 min) leading to an increased retention time (~39-40 min).

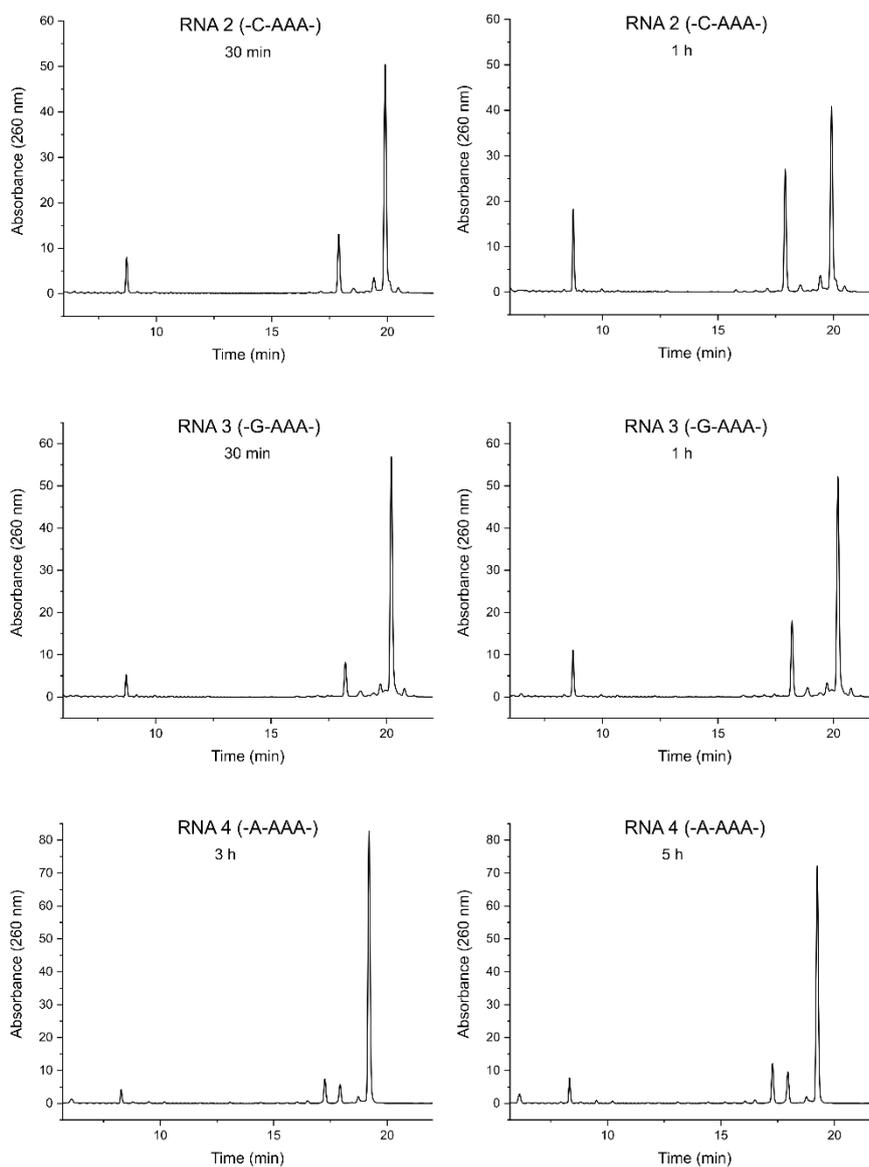

## S-2. RNA cleavage experiments

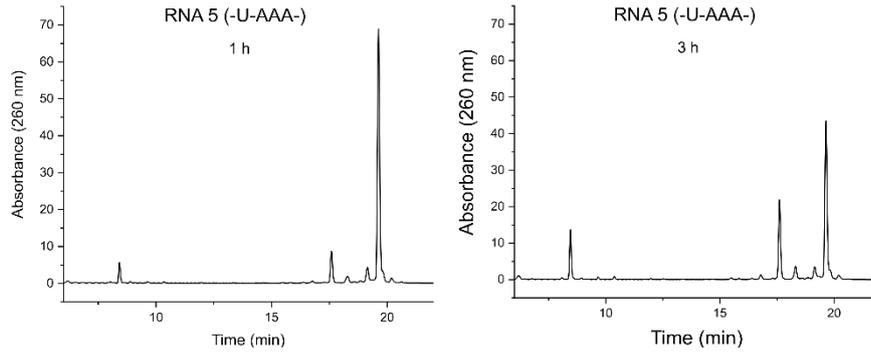

RNA cleavage experiments were performed and analysed as previously reported,<sup>1</sup> but for clarity we requote it here. RNA targets (0.16 nmol, 4  $\mu\text{M}$  final concentration, except in turnover experiments where the RNA concentration was 100  $\mu\text{M}$  RNA) were equilibrated in appropriate amounts of water, HEPES buffer (10 mM HEPES, 0.1 M NaCl final concentration) and EDTA (10  $\mu\text{M}$  final concentration) over a 15-minute period at 37 °C. This was followed by the addition of  $\text{Zn}(\text{NO}_3)_2$  (aq) solution (110  $\mu\text{M}$   $\text{Zn}^{2+}$  which in the presence of the previously added 10  $\mu\text{M}$  EDTA results in 100  $\mu\text{M}$  accessible zinc ions), the PNAzyme (1.4 equiv relative to RNA, 5.6  $\mu\text{M}$ , except in turnover experiments where the PNAzyme concentration was 3  $\mu\text{M}$ ). The reaction mixtures were then allowed to incubate at 37 °C. The reactions were quenched at specified time points with EDTA (70  $\mu\text{L}$  of 2 mM EDTA in 30% MeCN/milliQ). The samples were analysed by anion exchange HPLC (IE-HPLC) using a Dionex NucleoPac PA-100 (4  $\times$  250 mm) column with a linear gradient elution of 0–45% buffer B over 30 min at 60 °C. A flow rate of 1.5 mL/min was used and UV detection was carried out at 260 nm. The following solvent system was used: (A) 20 mM NaOAc in 30% aq. MeCN and (B) 20 mM NaOAc, 0.4 M  $\text{LiClO}_4$  in 30% aq. MeCN. The extent of cleavage of RNA substrates was based on the quantification of the remaining intact RNA target and the sum of the formed RNA fragments detected in the IE-HPLC analysis. Representative chromatograms are provided. The % RNA cleavage values presented are average values of at least two experiments (except in turnover experiments where the reported values are the mean cleavage of at least five experiments) with a standard deviation of less than  $\pm 3\%$  unless otherwise specified.

## S-3. Analysis of RNA Cleavage by IEX-HPLC and ESI-TOF MS

### S-3.1 The extent of cleavage of AAA bulges in RNAs 2-5 by the corresponding PNAzymes II-V

Timepoints at which the aliquots were quenched are shown on each chromatogram. These data are shown in Fig 2 and 3 in the main text.

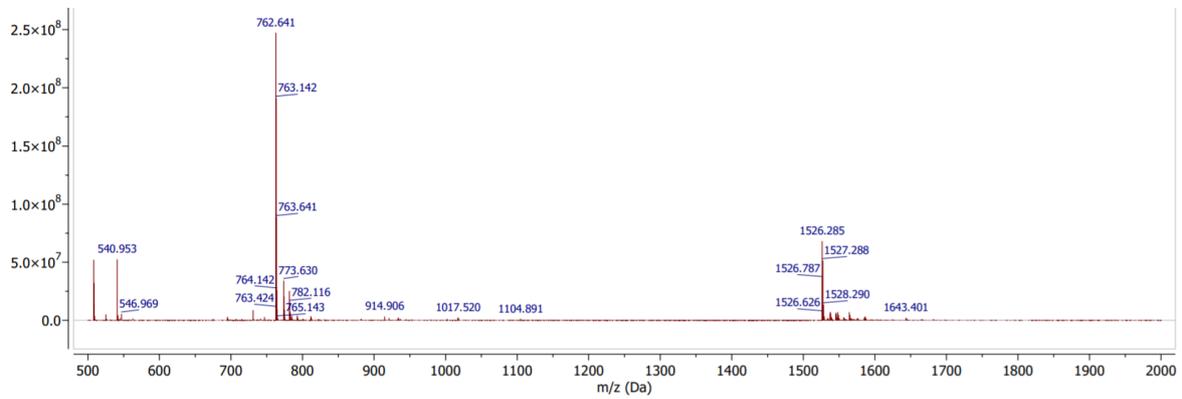

### S-3.2 MS analysis of RNA fragments from the cleavage of RNAs 2-4 by *PNAzymes II-IV*

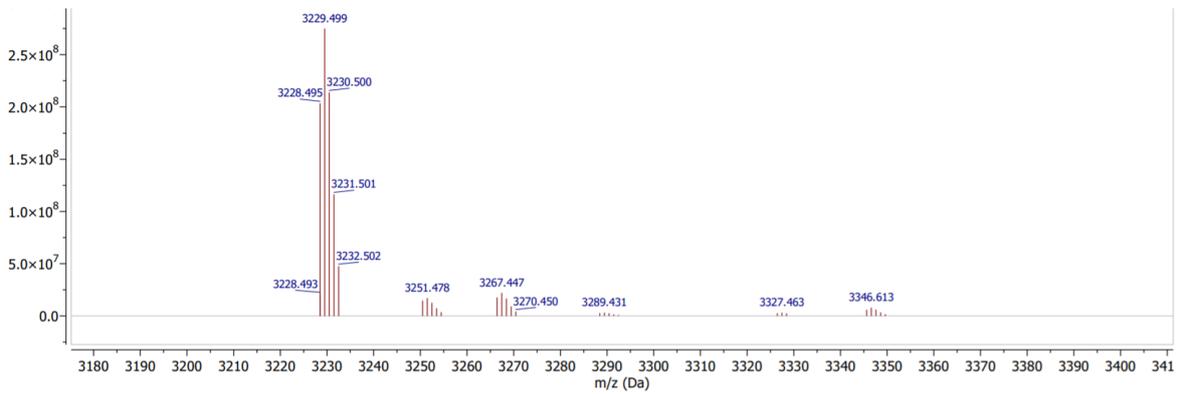

RNA 2 cleavage fragment 1 (5'-AGCCC-3')  $C_{47}H_{61}N_{19}O_{32}P_4$

Monoisotopic mass calc. 1527.268, obs. 1526.285.

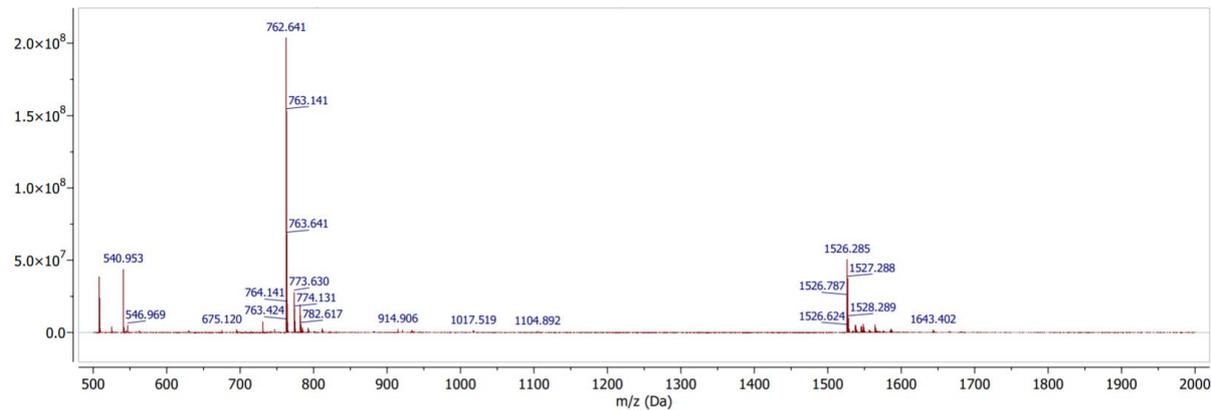

RNA 2 cleavage fragment 2 (2',3'-cyclic phosphate, 5'-AGAGUUC-C-AA-3')  $C_{96}H_{118}N_{40}O_{68}P_{10}$

Monoisotopic mass calc. 3228.438, obs. 3228.495.

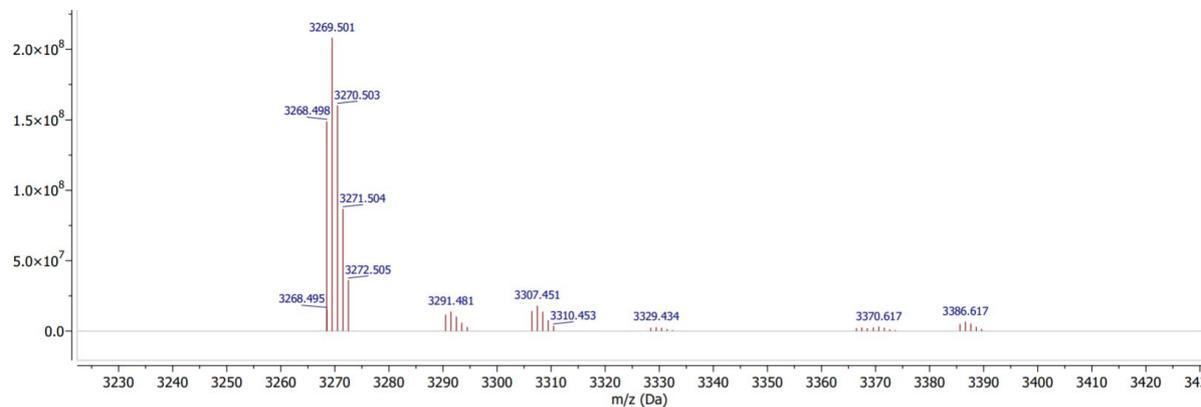

RNA 3 cleavage fragment 1 (5'-AGCCC-3')  $C_{47}H_{61}N_{19}O_{32}P_4$

Monoisotopic mass calc. 1527.268, obs. 1526.285.

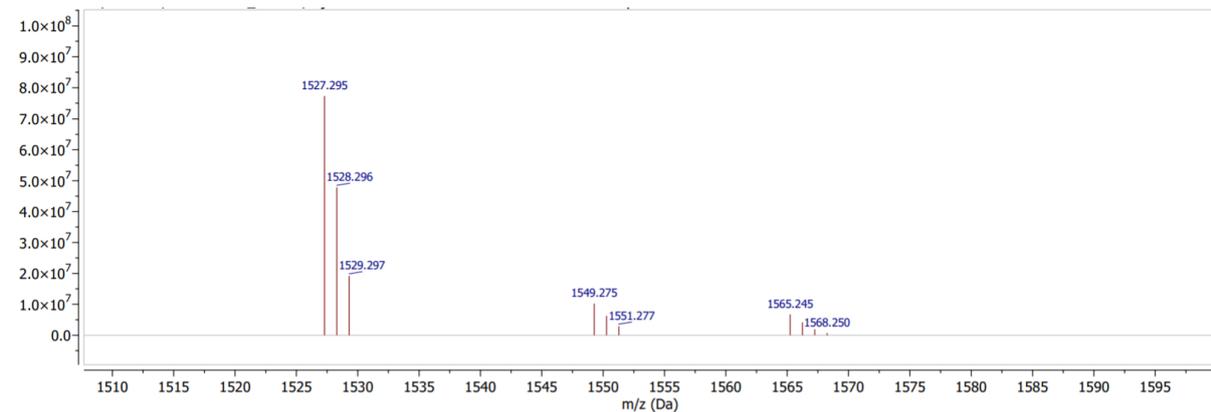

RNA 3 cleavage fragment 2 (2',3'-cyclic phosphate, 5'-AGAGUUC-G-AA-3')  $C_{97}H_{118}N_{42}O_{68}P_{10}$

Monoisotopic mass calc. 3268.444, obs. 3268.498

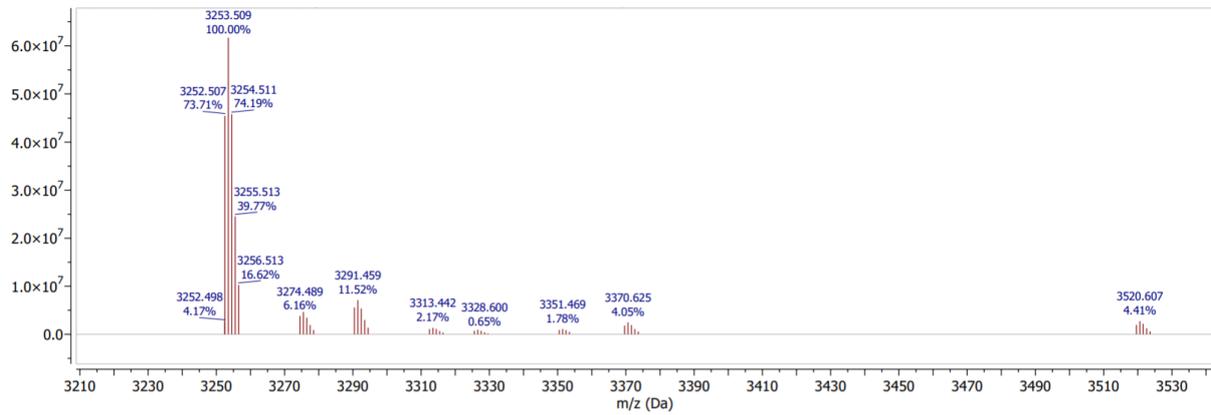

RNA 4 cleavage fragment 1 (5'-AGCCC-3')  $C_{47}H_{61}N_{19}O_{32}P_4$

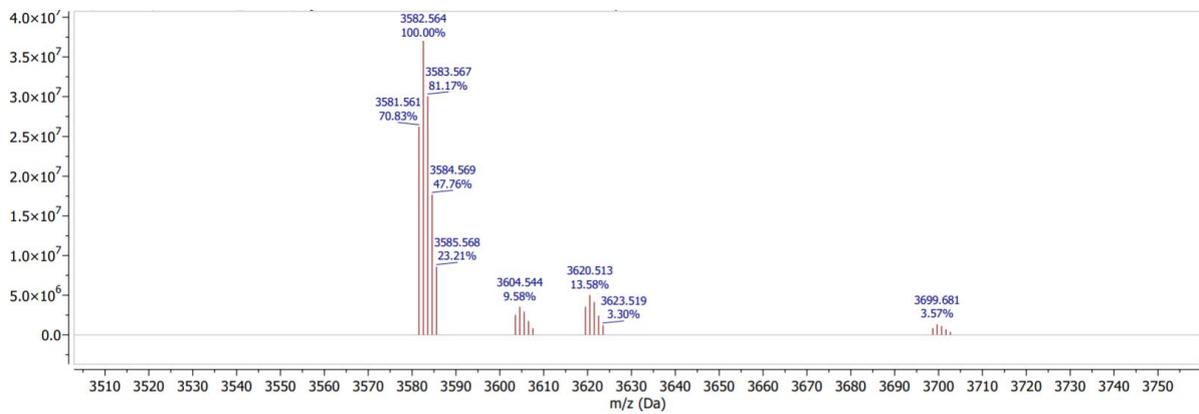

Monoisotopic mass calc. 1527.268, obs. 1527.295.

RNA 4 cleavage fragment 2 (2',3'-cyclic phosphate, 5'-AGAGUUC-A-AA-3') C<sub>97</sub>H<sub>118</sub>N<sub>42</sub>O<sub>67</sub>P<sub>10</sub>  
 Monoisotopic mass calc. 3252.449, obs. 3252.507

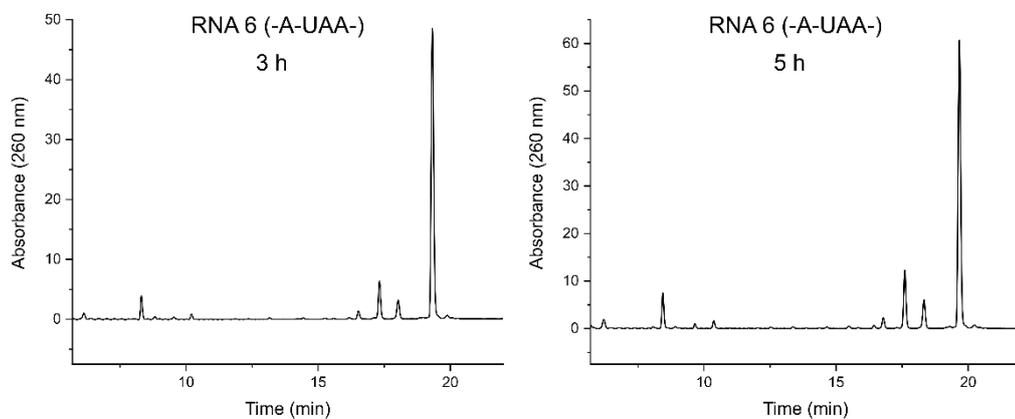

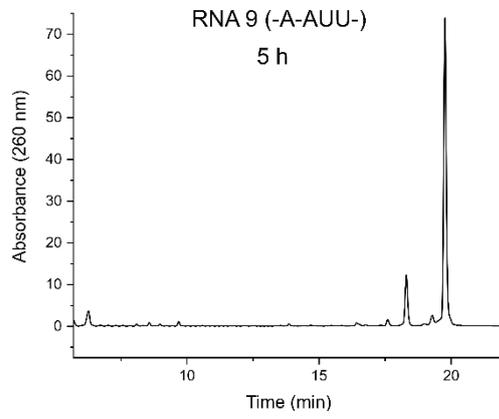

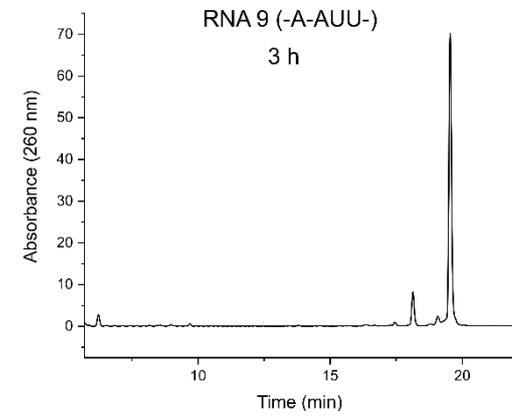

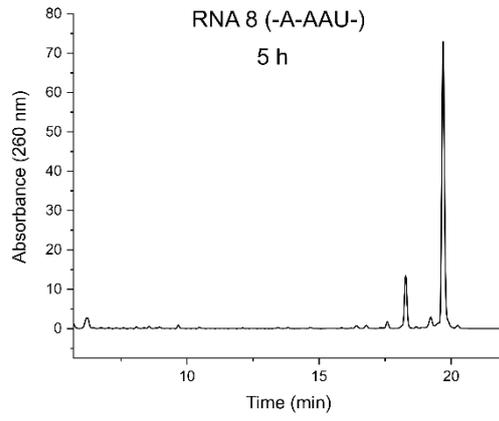

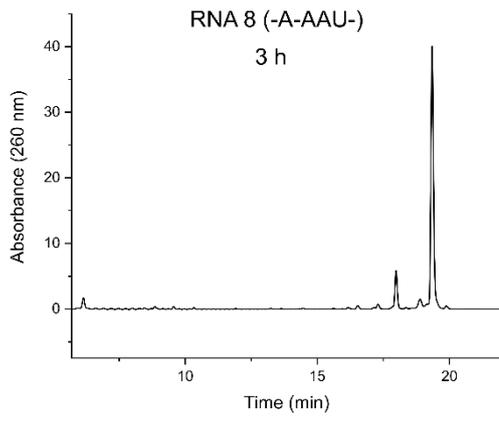

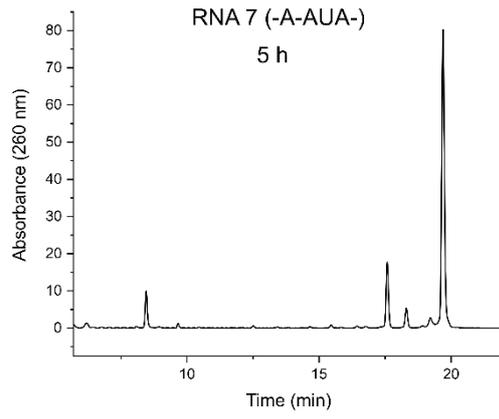

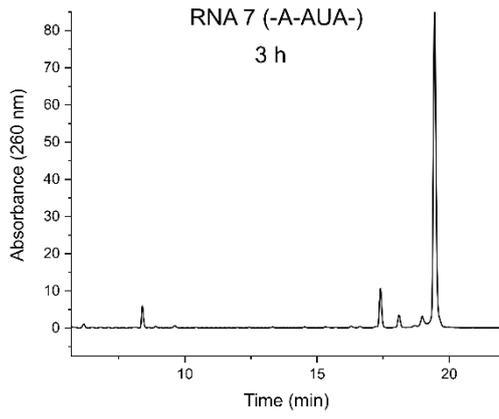

RNA 4 cleavage fragment 3 (2',3'-cyclic phosphate, 5'-AGAGUUC-A-AAA-3') C<sub>107</sub>H<sub>130</sub>N<sub>47</sub>O<sub>73</sub>P<sub>11</sub>  
 Monoisotopic mass calc. 3581.502, obs. 3581.561

### S-3.3 The extent of cleavage of 3-nucleotide bulge-forming RNAs 6-9 by *PNAzyme IV*

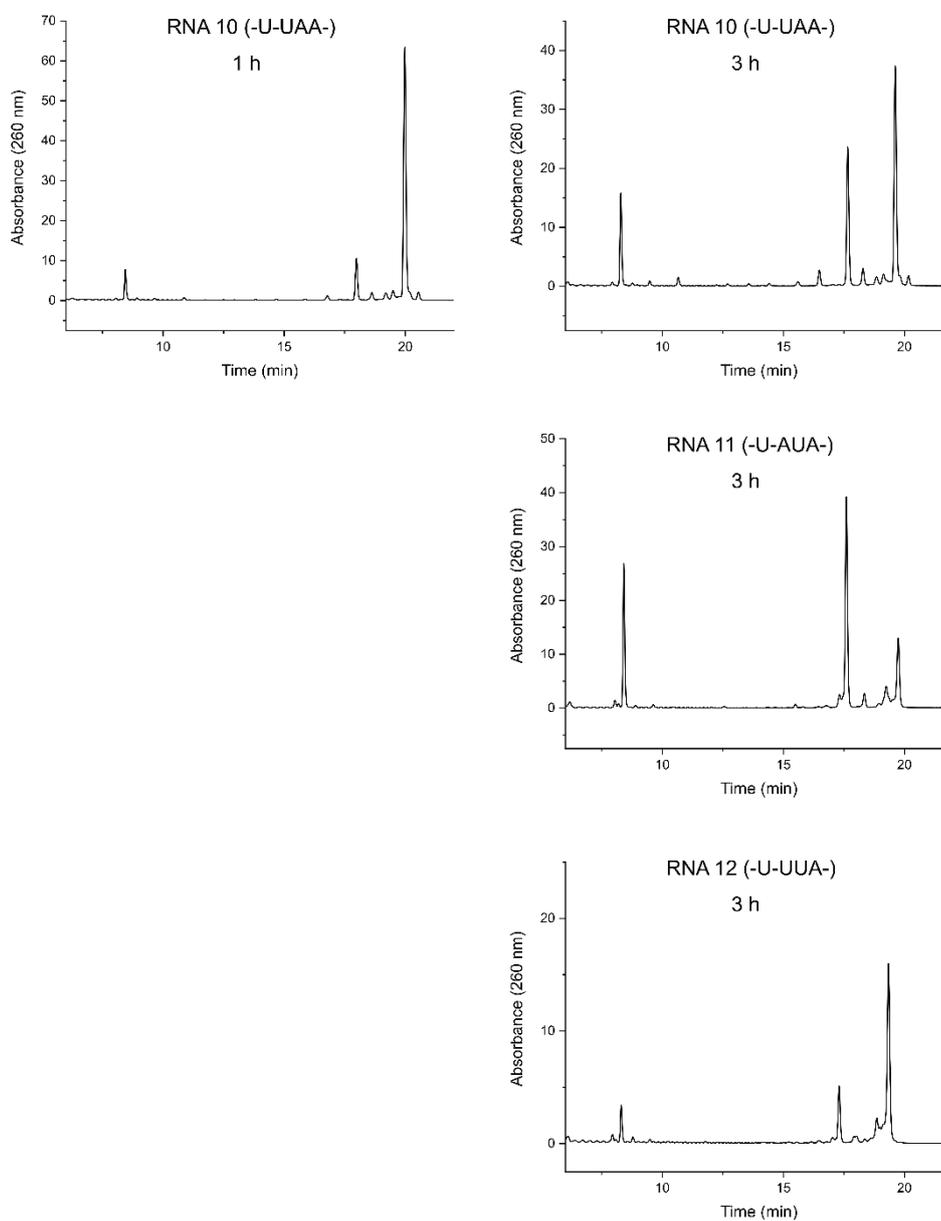

Timepoints at which the aliquots were quenched are shown on each chromatogram. These data are shown in Fig 3 in the main text.

### S-3.4. The extent of cleavage of 3-nucleotide bulge-forming RNAs 10-12 by *PNAzyme V*

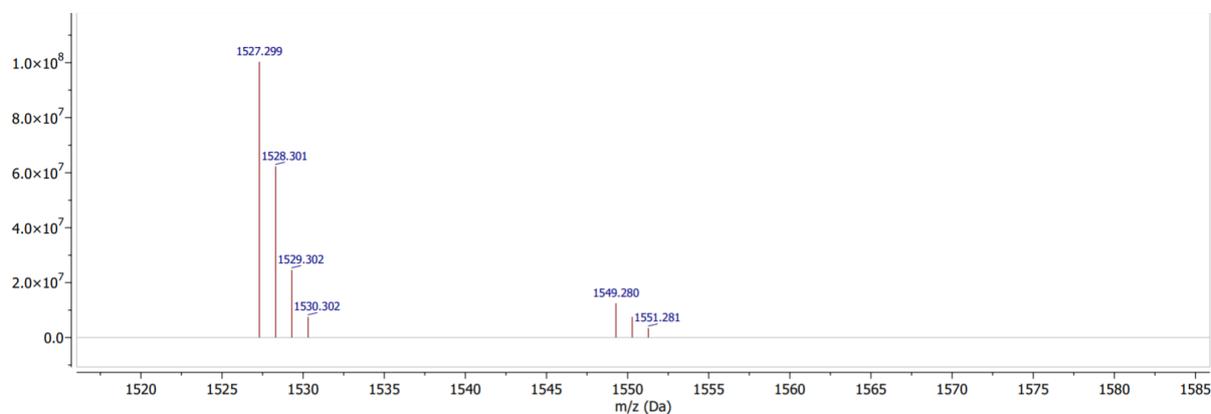

Timepoints at which the aliquots were quenched are shown on each chromatogram. These data are shown in Fig 3 in the main text.

### S-3.5. MS analysis of RNA fragments from the cleavage of RNA 11 by *PNAzyme V*

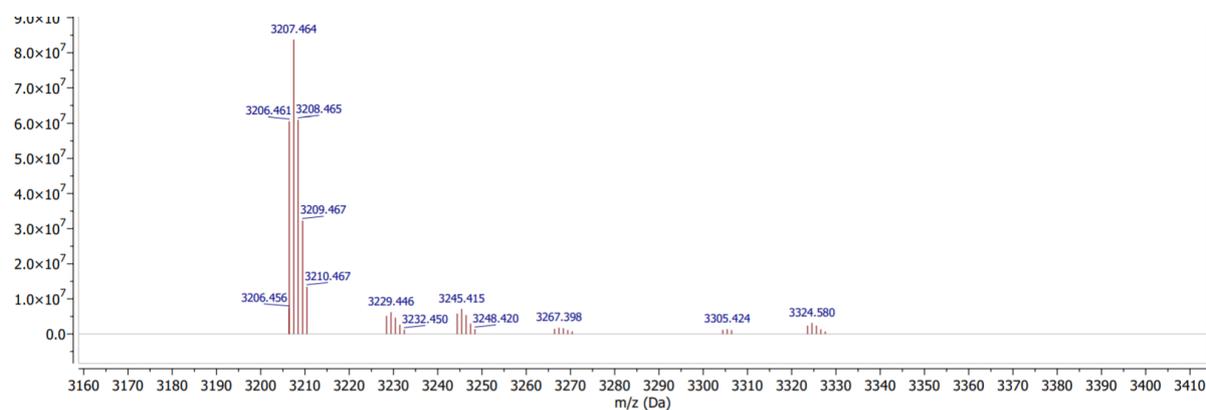

RNA 11 cleavage fragment 1 (5'-AGCCC-3') C<sub>47</sub>H<sub>61</sub>N<sub>19</sub>O<sub>32</sub>P<sub>4</sub>

Monoisotopic mass calc. 1527.268, obs. 1527.299.

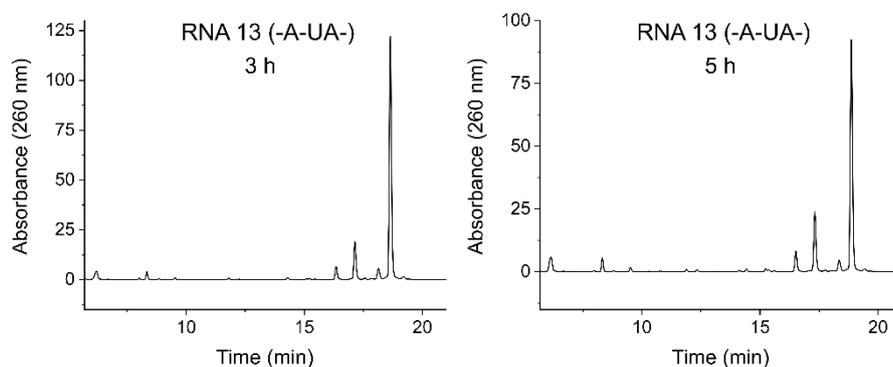

RNA 11 cleavage fragment 2 (2',3'-cyclic phosphate, 5'-AGAGUUC-U-AU-3') C<sub>95</sub>H<sub>116</sub>N<sub>36</sub>O<sub>71</sub>P<sub>10</sub>

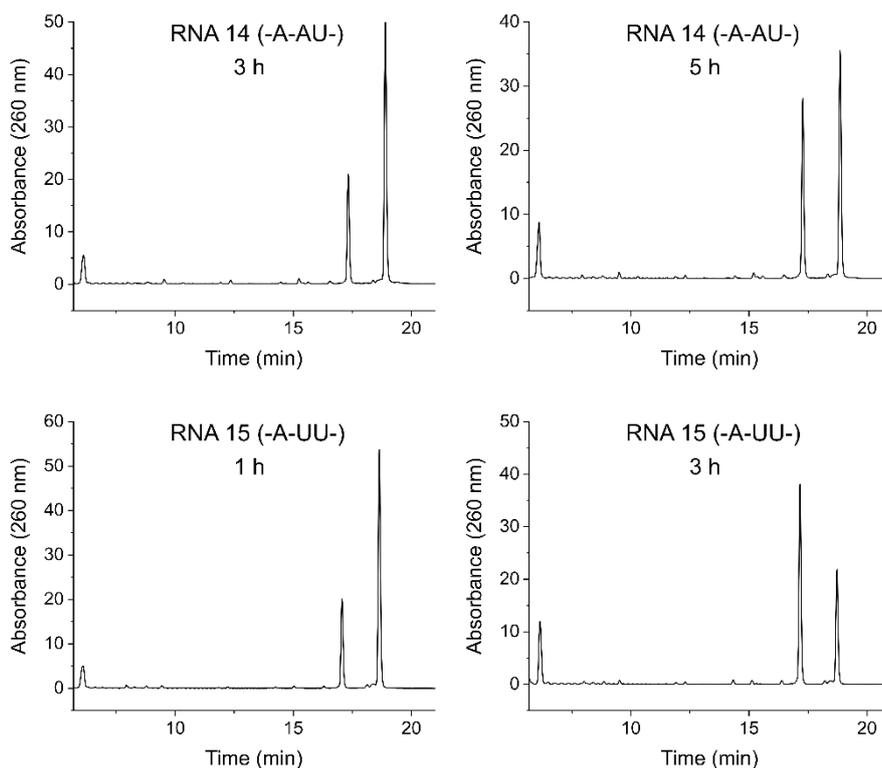

Monoisotopic mass calc. 3206.395 obs. 3206.461

### S-3.6. The extent of cleavage of 2-nucleotide bulge-forming RNAs 13-15 by *PNAzyme IV*

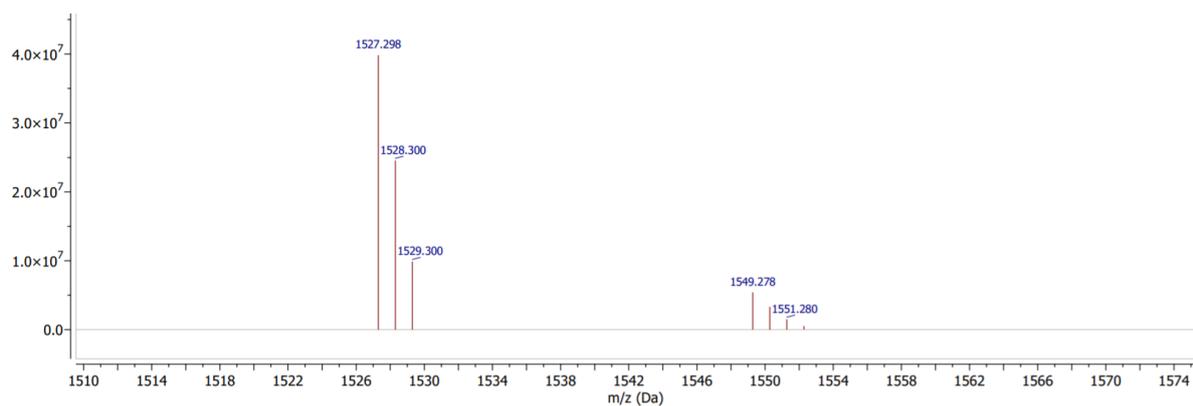

Timepoints at which the aliquots were quenched are shown on each chromatogram. These data are summarised in Fig 4 in the main text.

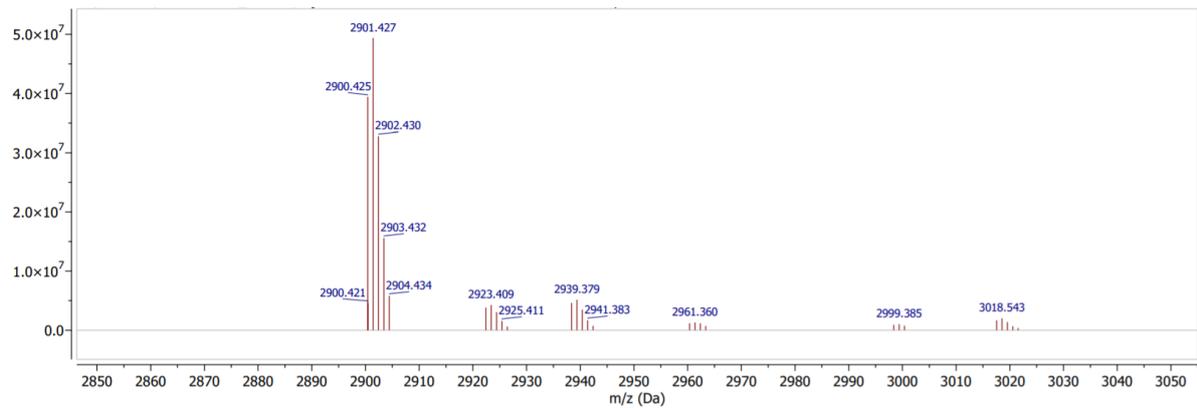

### S-3.7. MS analysis of RNA fragments from the cleavage of RNAs 13, 15 by *PNAzyme IV*

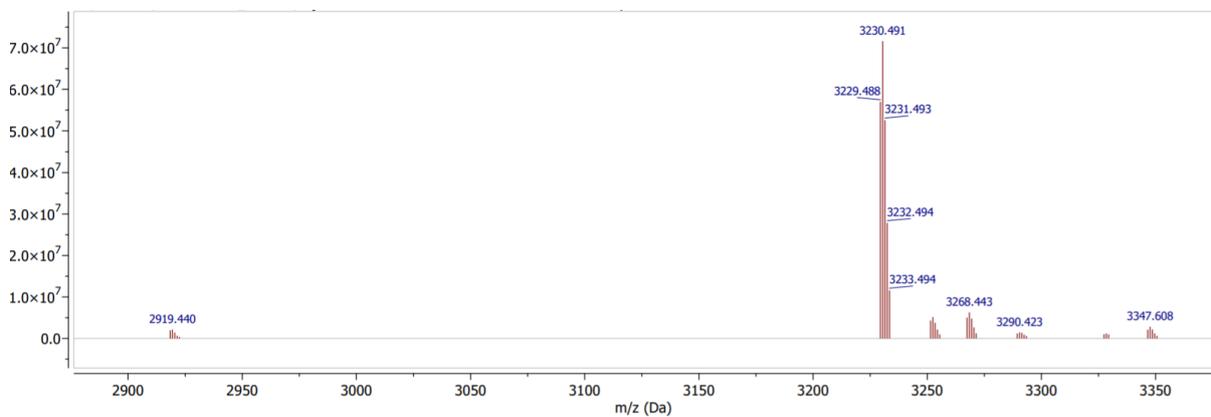

RNA 13 cleavage fragment 1 (5'-AGCCC-3')  $C_{47}H_{61}N_{19}O_{32}P_4$   
 Monoisotopic mass calc. 1527.268, obs. 1527.298.

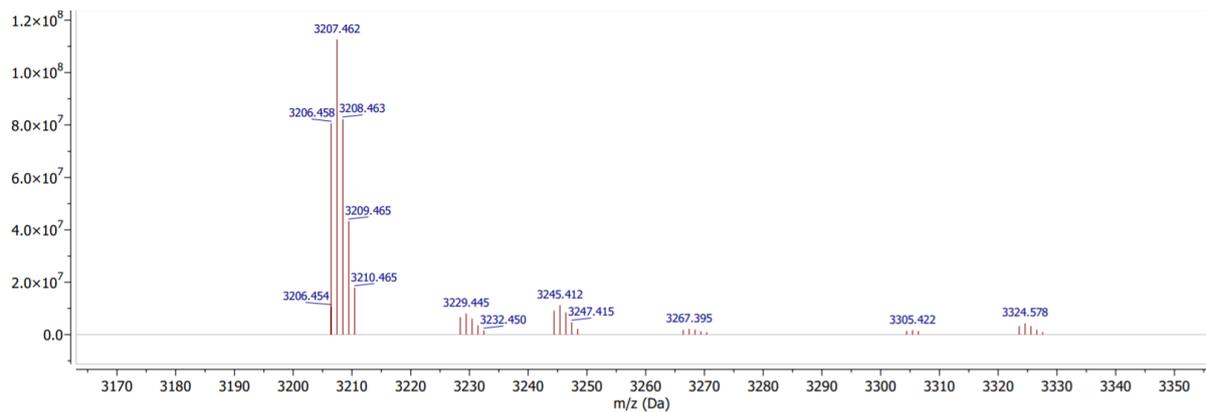

RNA 13 cleavage fragment 2 (2',3'-cyclic phosphate, 5'-AGAGUUC-A-U-3')  $C_{86}H_{105}N_{34}O_{63}P_9$   
Monoisotopic mass calc. 2900.370 obs. 2900.425

RNA 13 cleavage fragment 3 (2',3'-cyclic phosphate, 5'-AGAGUUC-A-UA-3')  $C_{96}H_{117}N_{39}O_{69}P_{10}$   
Monoisotopic mass calc. 3229.422 obs. 3229.488

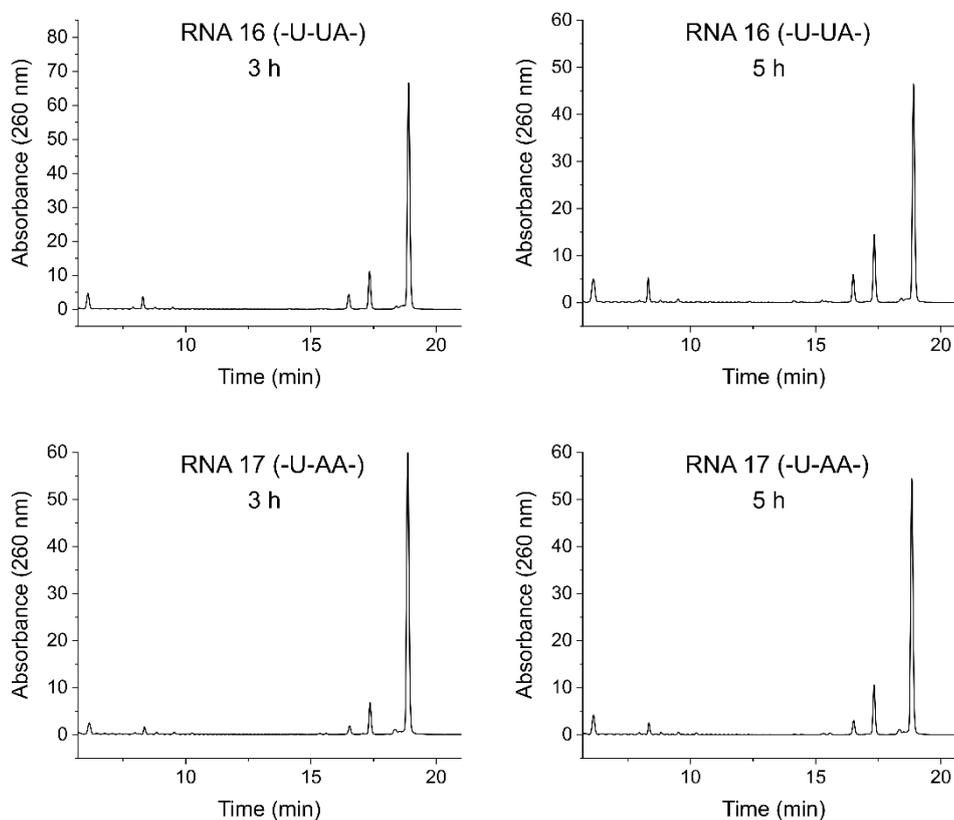

RNA 15 cleavage fragment 1 (2',3'-cyclic phosphate, 5'-AGA-GUUC-A-UU-3')  $C_{95}H_{116}N_{36}O_{71}P_{10}$   
Monoisotopic mass calc. 3206.395, obs. 3206.458.

### S-3.8. The extent of cleavage of 2-nucleotide bulge-forming RNAs 16-17 by *PNAzyme V*

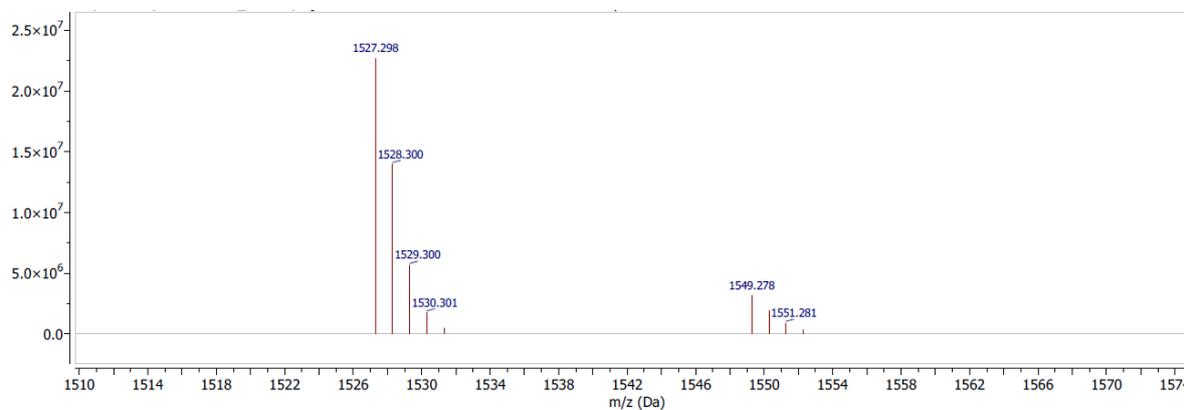

Timepoints at which the aliquots were quenched are shown on each chromatogram. These data are summarised in Fig 4 in the main text.

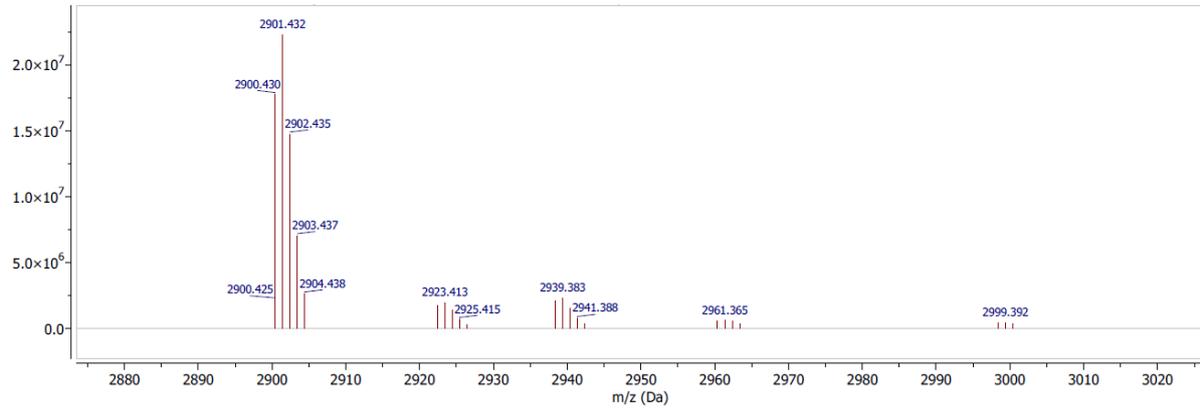

### S-3.9. MS analysis of RNA fragments from the cleavage of RNA 17 by *PNAzyme V*

RNA 17 cleavage fragment 1 (5'-AGCCC-3')  $C_{47}H_{61}N_{19}O_{32}P_4$

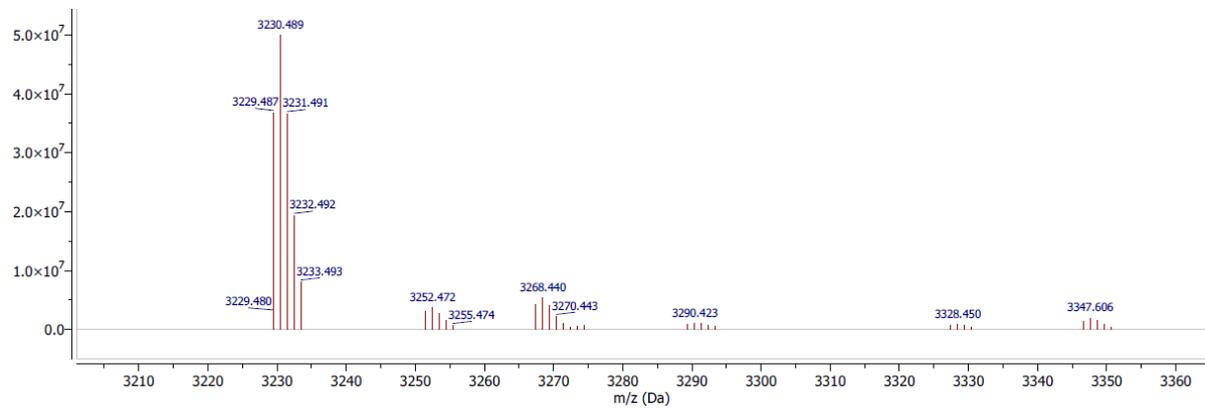

Monoisotopic mass calc. 1527.268, obs. 1527.298.

RNA 17 cleavage fragment 2 (2',3'-cyclic phosphate 5'-AGA-GUUC-U-A-3') C<sub>86</sub>H<sub>105</sub>N<sub>34</sub>O<sub>63</sub>P<sub>9</sub>  
Monoisotopic mass calc. 2900.370, obs. 2900.425.

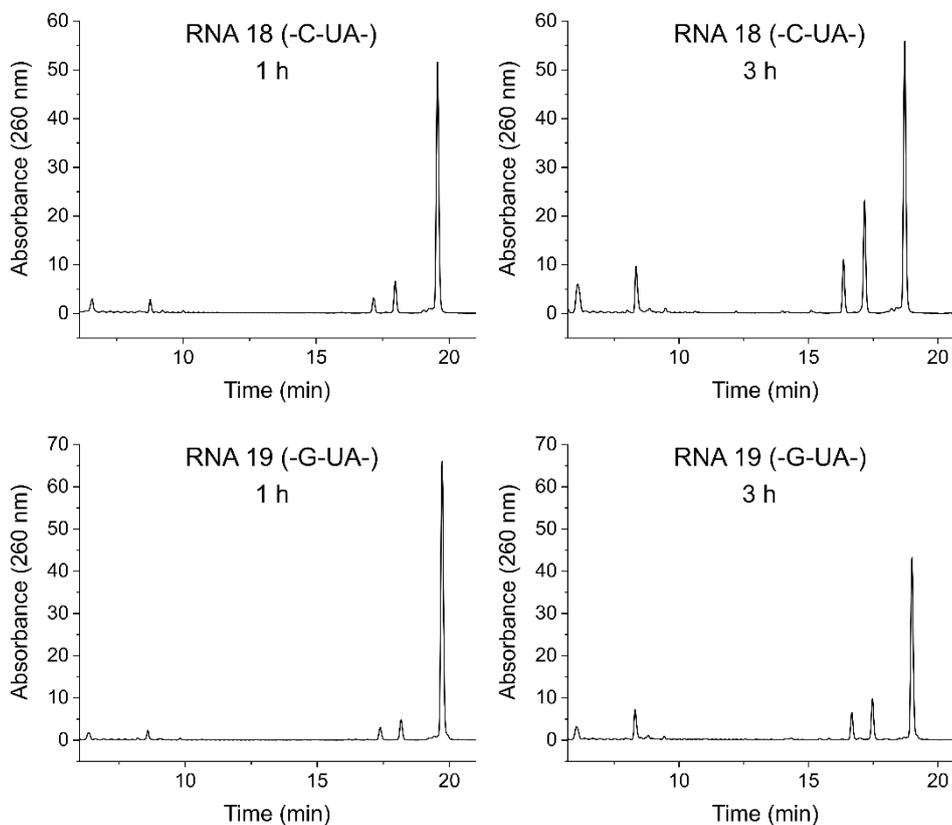

RNA 17 cleavage fragment 3 (2',3'-cyclic phosphate 5'-AGA-GUUC-U-AA-3') C<sub>96</sub>H<sub>117</sub>N<sub>39</sub>O<sub>69</sub>P<sub>10</sub>  
Monoisotopic mass calc. 3229.422, obs. 3229.480.

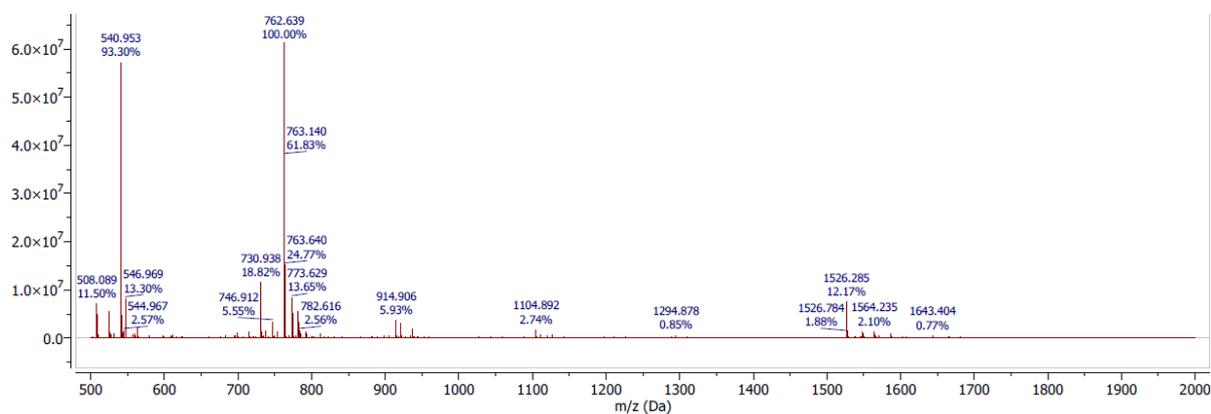

### S-3.10 The extent of cleavage of UA bulges in RNAs 18-19 by *PNAzymes II-III*

Timepoints at which the aliquots were quenched are shown on each chromatogram. These data are summarised in Fig 4 in the main text.

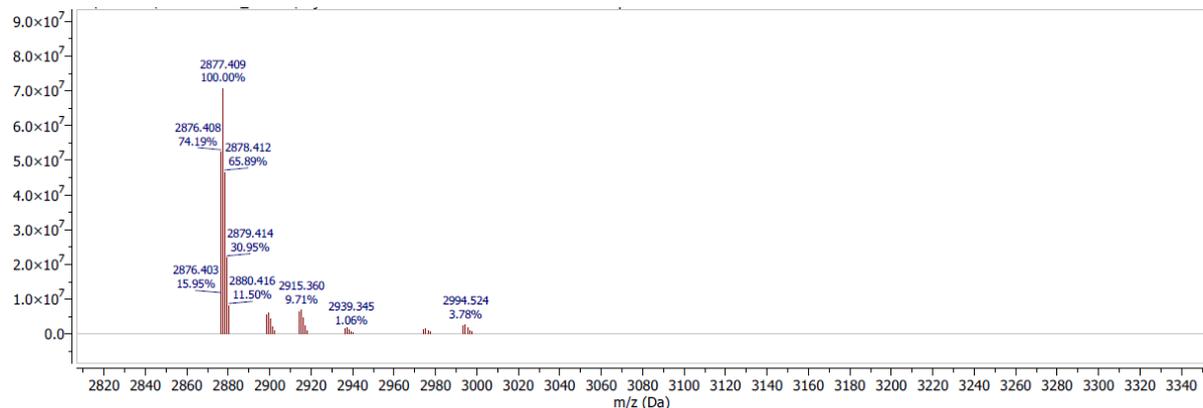

### S-3.11. MS analysis of RNA fragments from the cleavage of RNA 18 by *PNAzyme II*

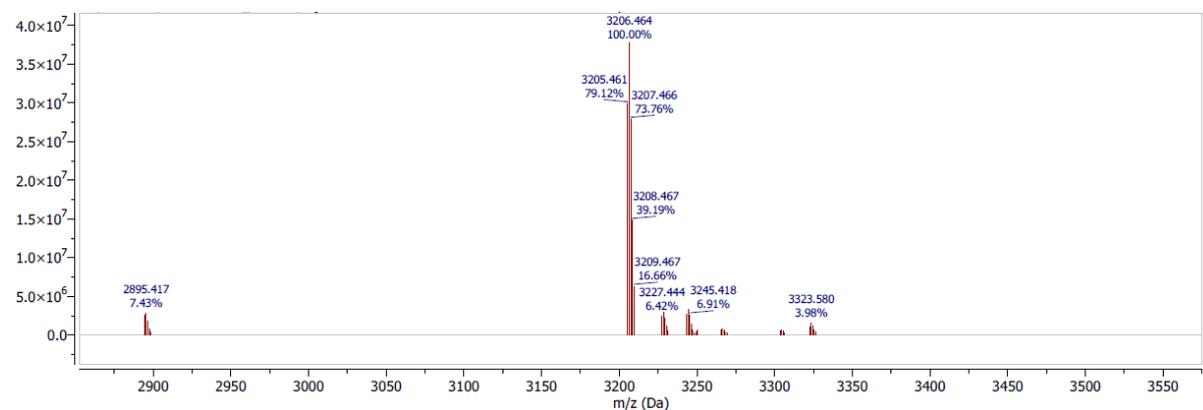

RNA 18 cleavage fragment 1 (5'-AGCCC-3')  $C_{47}H_{61}N_{19}O_{32}P_4$   
Monoisotopic mass calc. 1527.268, obs. 1526.285.

RNA 18 cleavage fragment 2 (2',3'-cyclic phosphate 5'-AGA-GUUC-C-U-3')  $C_{85}H_{105}N_{32}O_{64}P_9$   
 Monoisotopic mass calc. 2876.358, obs. 2876.408.

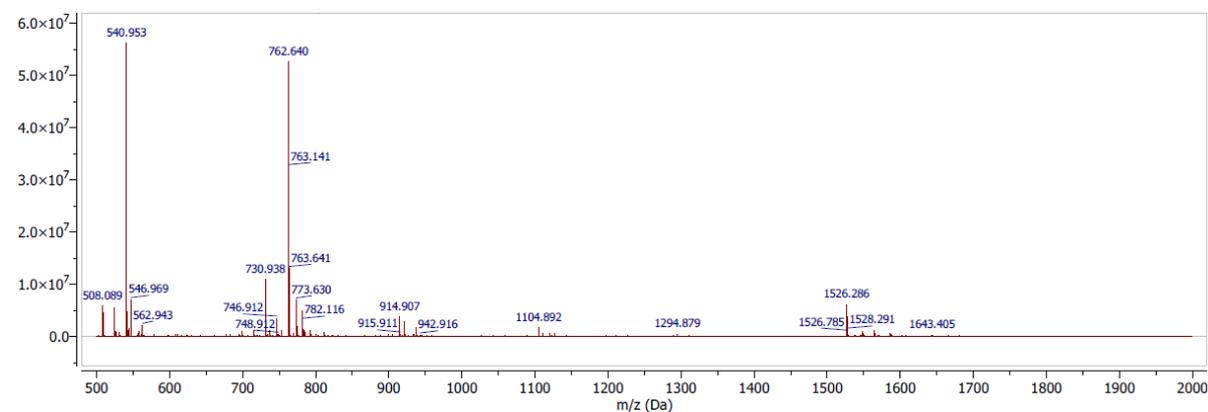

RNA 18 cleavage fragment 3 (2',3'-cyclic phosphate 5'-AGA-GUUC-C-UA-3')  $C_{95}H_{117}N_{37}O_{70}P_{10}$   
 Monoisotopic mass calc. 3205.410, obs. 3205.461

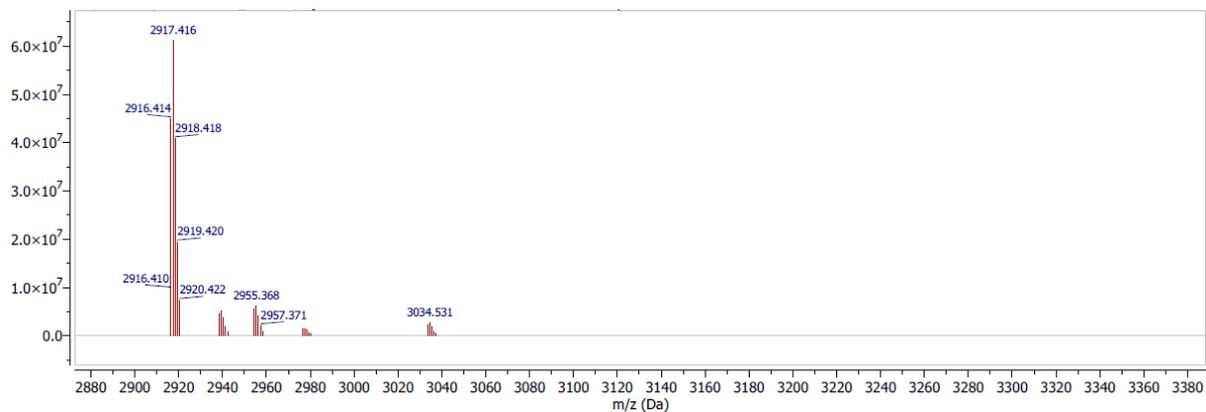

### S-3.12. MS analysis of RNA fragments from the cleavage of RNA 19 by *PNAzyme III*

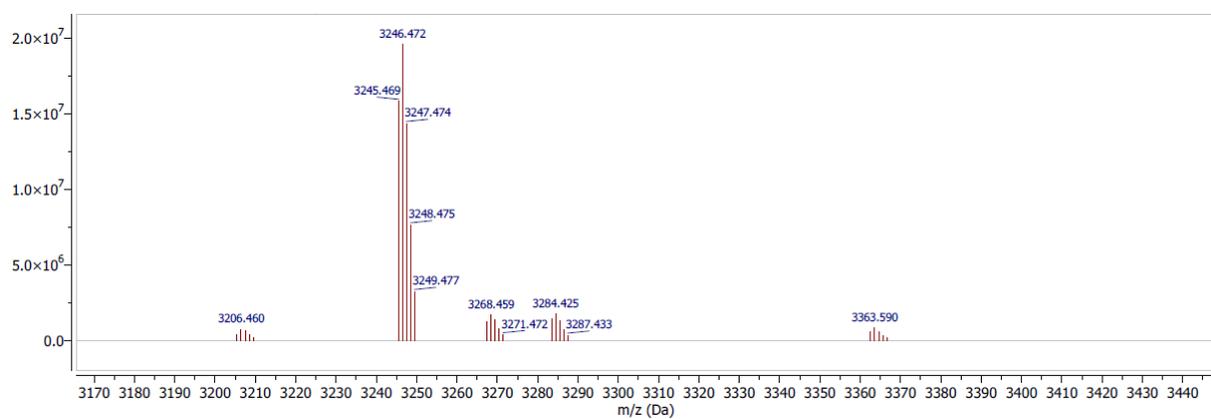

RNA 19 cleavage fragment 1 (5'-AGCCC-3')  $C_{47}H_{61}N_{19}O_{32}P_4$   
 Monoisotopic mass calc. 1527.268, obs. 1526.285.

RNA 19 cleavage fragment 2 (2',3'-cyclic phosphate 5'-AGA-GUUC-G-U-3')  $C_{86}H_{105}N_{34}O_{64}P_9$   
Monoisotopic mass calc. 2916.365, obs. 2916.414.

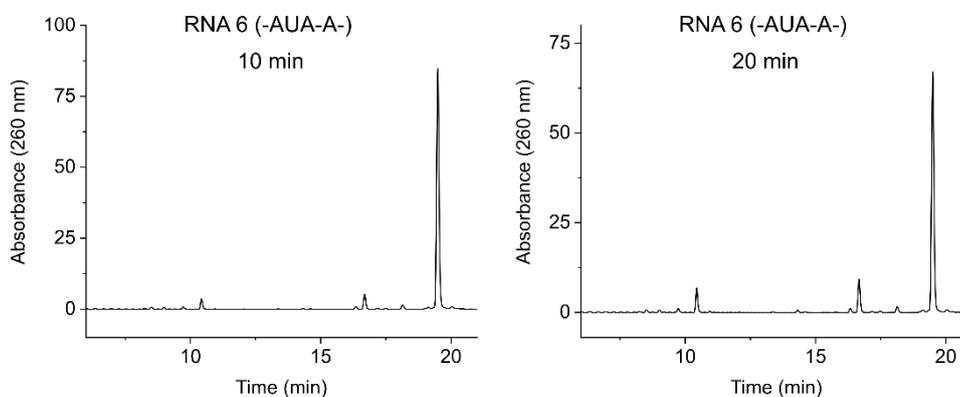

RNA 19 cleavage fragment 3 (2',3'-cyclic phosphate 5'-AGA-GUUC-G-UA-3')  $C_{96}H_{117}N_{39}O_{70}P_{10}$   
Monoisotopic mass calc. 3245.417, obs. 3245.469.

### S-3.13 The extent of cleavage of RNA 6 by *PNAzyme VII*

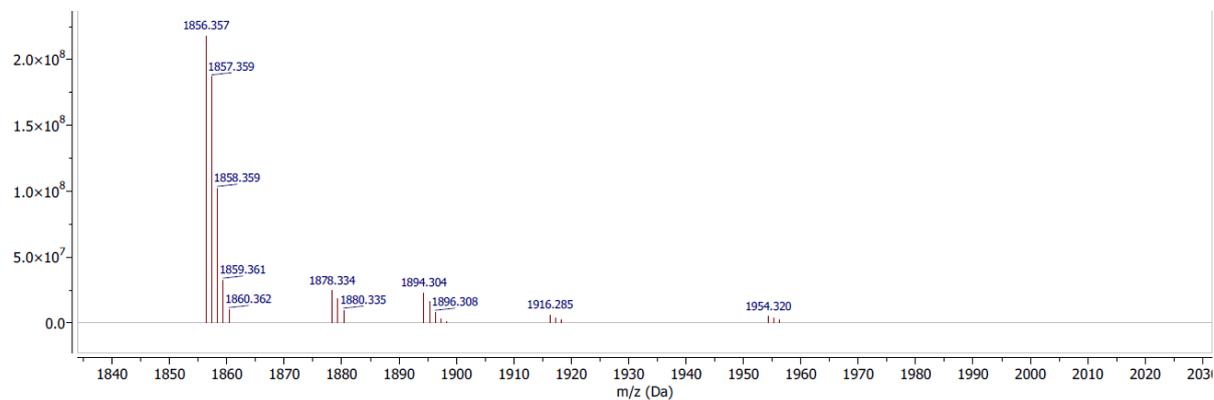

Timepoints at which the aliquots were quenched are shown on each chromatogram. These data are summarised in Fig 5 in the main text.

### S-3.14. MS analysis of RNA fragments from the cleavage of RNA 6 by *PNzyme VII*

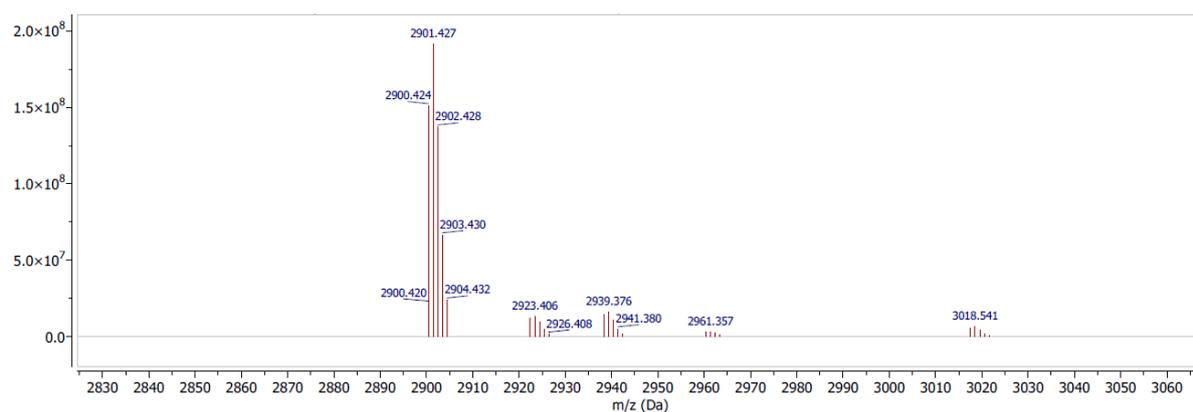

RNA 6 cleavage fragment 1 (5'-A-AGCCC-3') C<sub>57</sub>H<sub>73</sub>N<sub>24</sub>O<sub>38</sub>P<sub>5</sub>

Monoisotopic mass calc. 1856.321, obs. 1856.357.

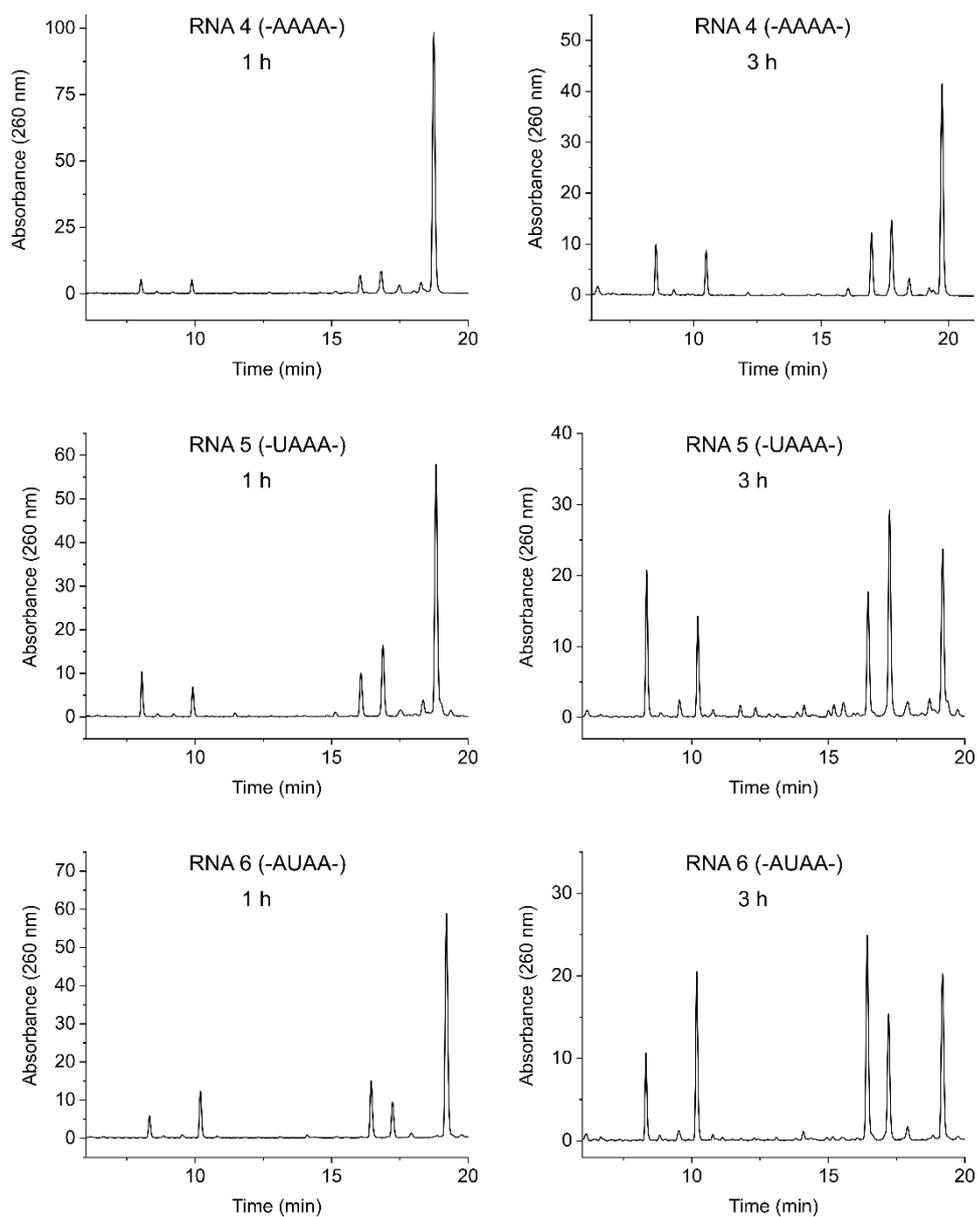

RNA 6 cleavage fragment 2 (2',3'-cyclic phosphate 5'-AGA-GUUC-AU-3') C<sub>86</sub>H<sub>105</sub>N<sub>34</sub>O<sub>63</sub>P<sub>9</sub>

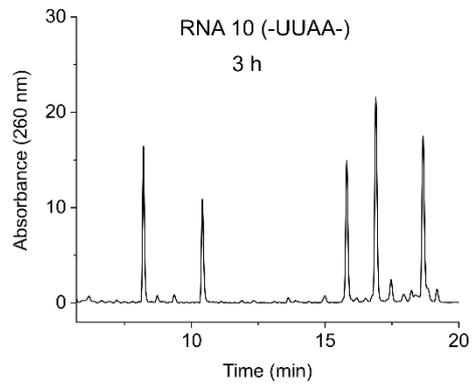

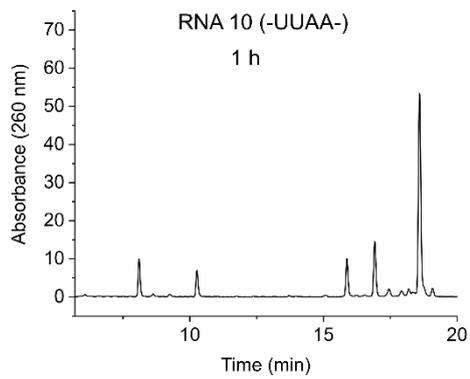

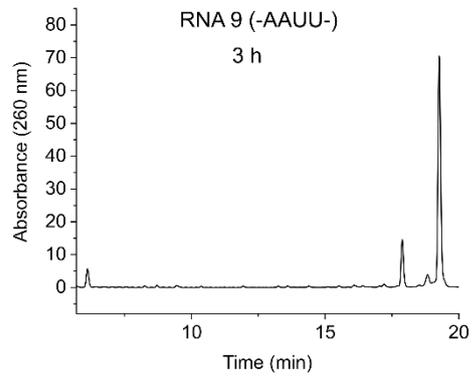

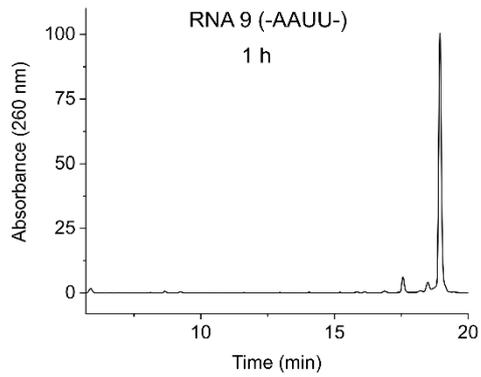

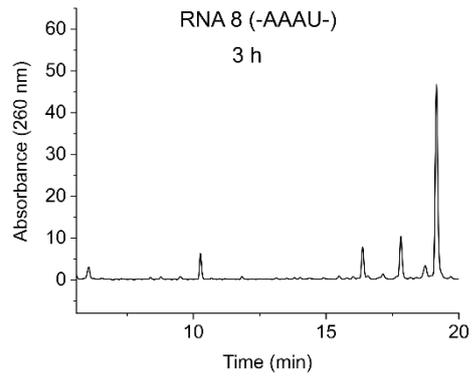

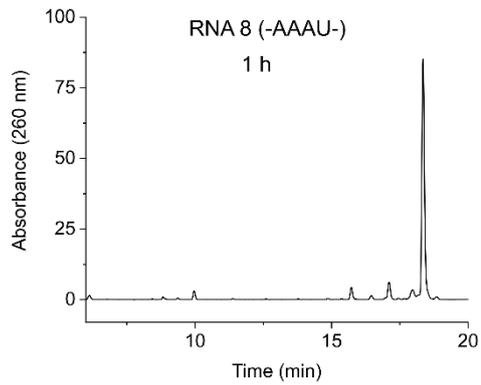

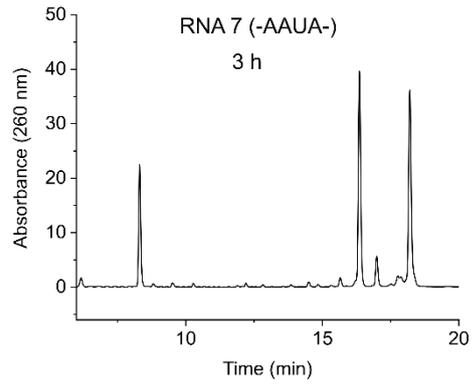

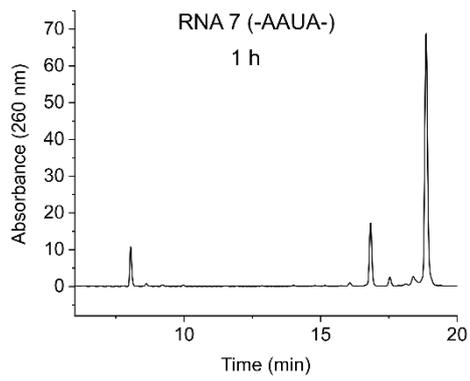

Monoisotopic mass calc. 2900.370, obs. 2900.424.

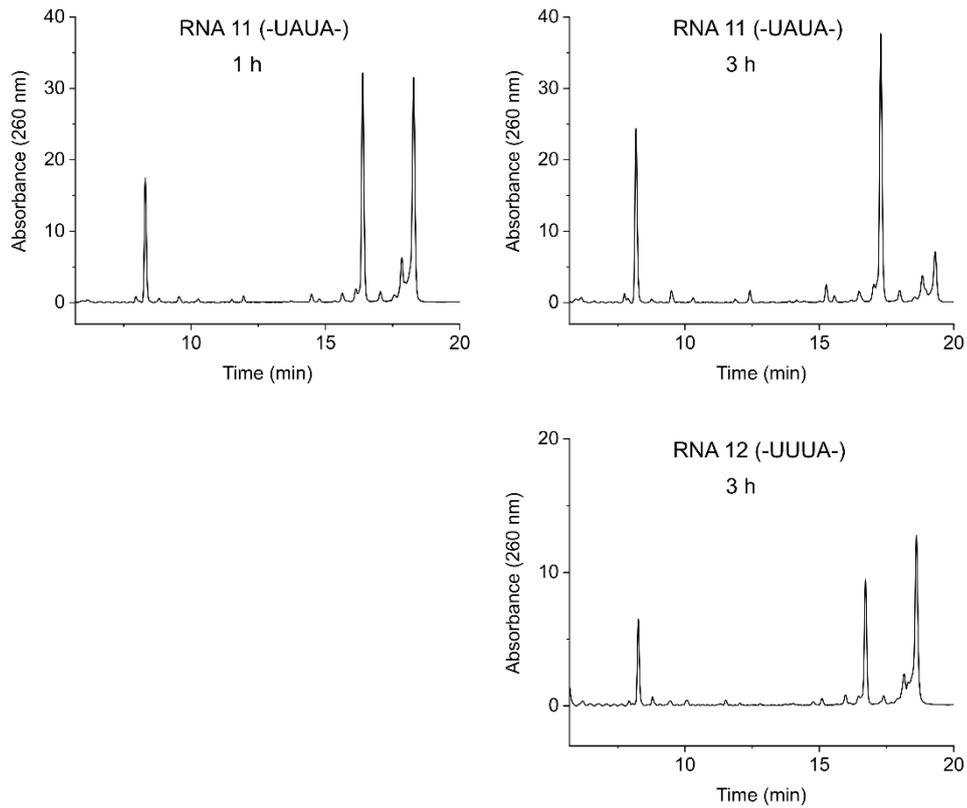

### S-3.15 The extent of cleavage of 4-nucleotide bulge-forming RNAs 4-12 by *PNAzyme I*

Timepoints at which the aliquots were quenched are shown on each chromatogram. These data are summarised in Fig 8 in the main text. The chromatogram corresponding to the cleavage of RNA 4 by *PNAzyme I* in 3 h has been reported previously.<sup>1</sup>

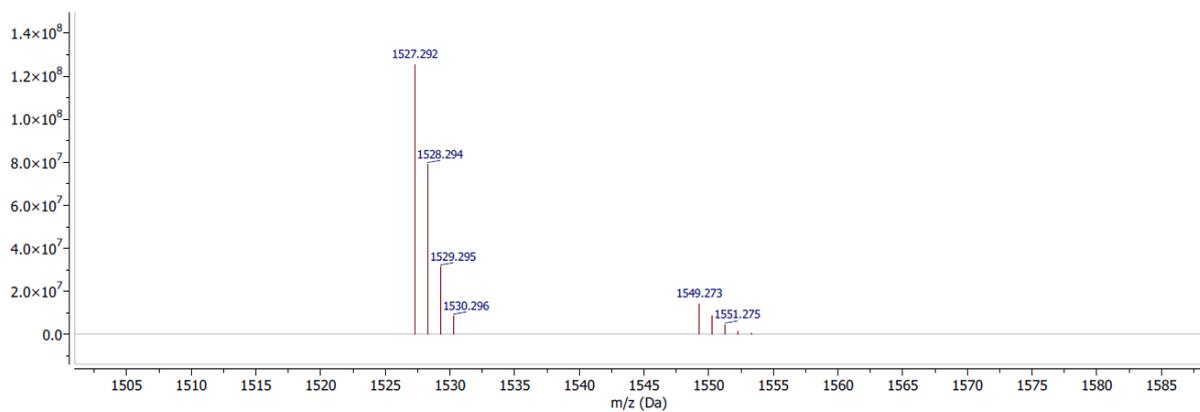

### S-3.16. MS analysis of RNA fragments from the cleavage of RNAs 4 and 11 by *PNAzyme I*

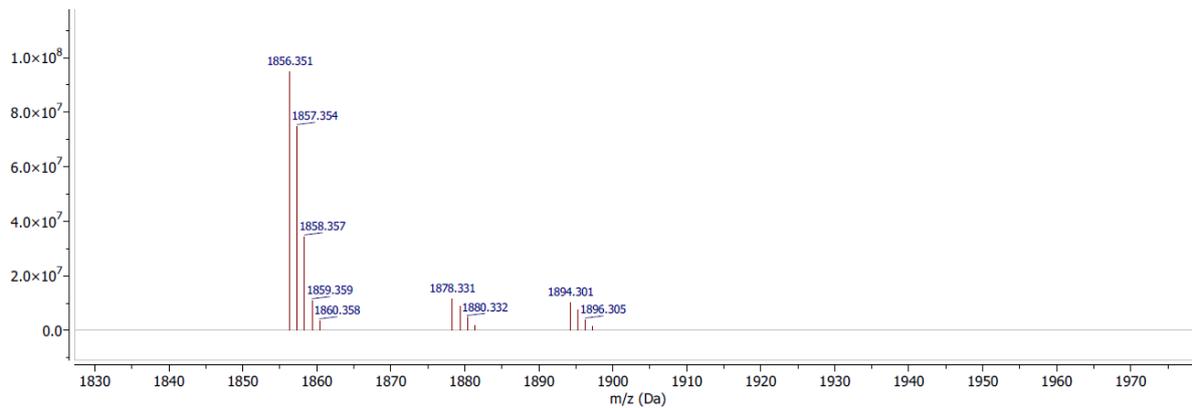

RNA 4 cleavage fragment 1 (5'-AGCCC-3')  $C_{47}H_{61}N_{19}O_{32}P_4$

Monoisotopic mass calc. 1527.268, obs. 1527.292.

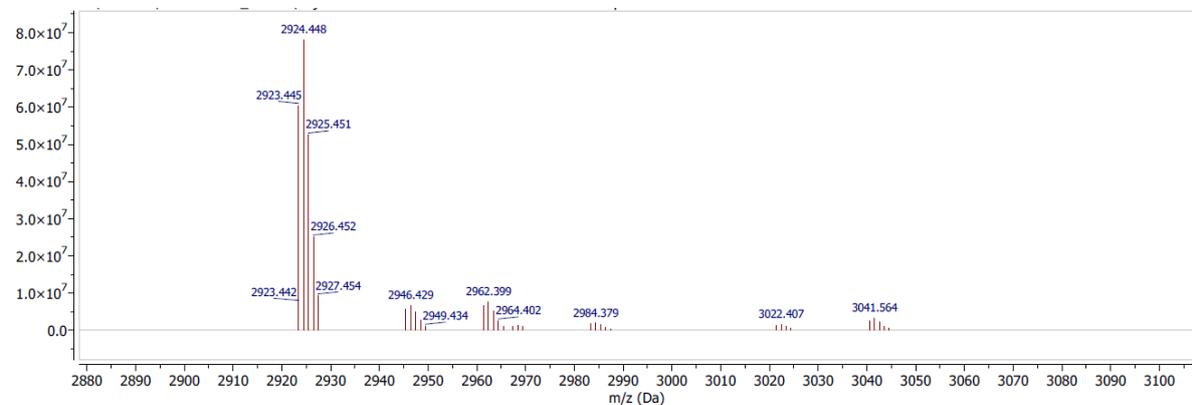

RNA 4 cleavage fragment 2 (5'-AA-GCCC-3') C<sub>57</sub>H<sub>73</sub>N<sub>24</sub>O<sub>38</sub>P<sub>5</sub>

Monoisotopic mass calc. 1856.321, obs. 1856.351.

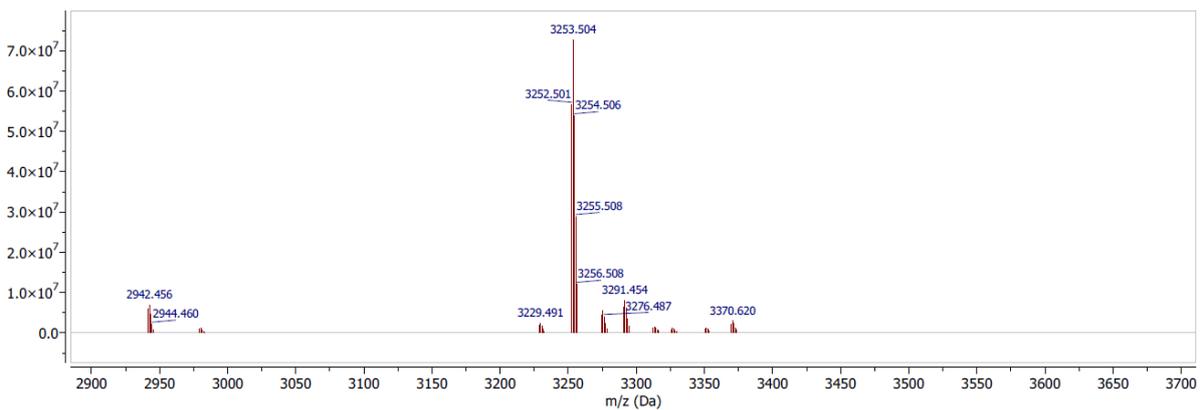

RNA 4 cleavage fragment 3 (2',3'-cyclic phosphate, 5'-AGAGUUC-AA-3') C<sub>87</sub>H<sub>106</sub>N<sub>37</sub>O<sub>61</sub>P<sub>9</sub>

Monoisotopic mass calc. 2923.397, obs. 2923.445.

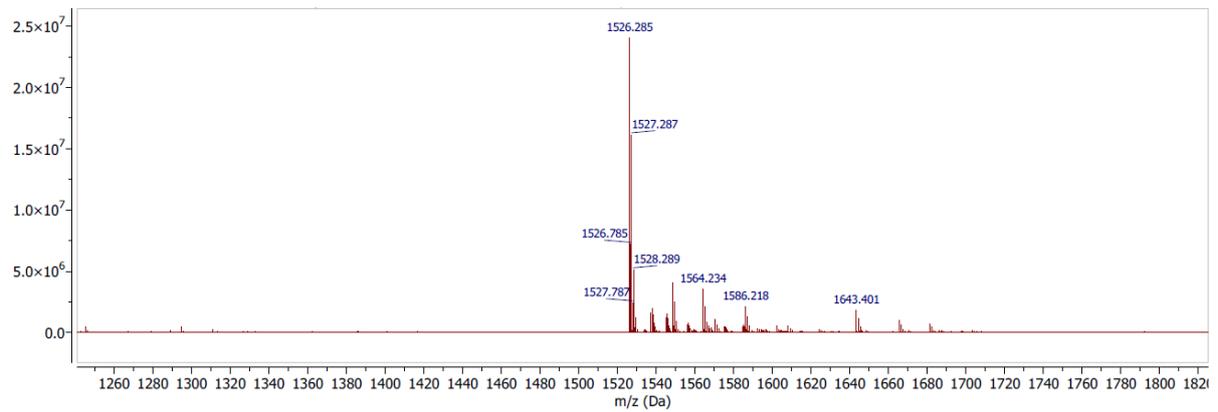

RNA 4 cleavage fragment 4 (2',3'-cyclic phosphate, 5'-AGAGUUC-AAA-3') C<sub>97</sub>H<sub>118</sub>N<sub>42</sub>O<sub>67</sub>P<sub>10</sub>

Monoisotopic mass calc. 3252.449, obs. 3252.501

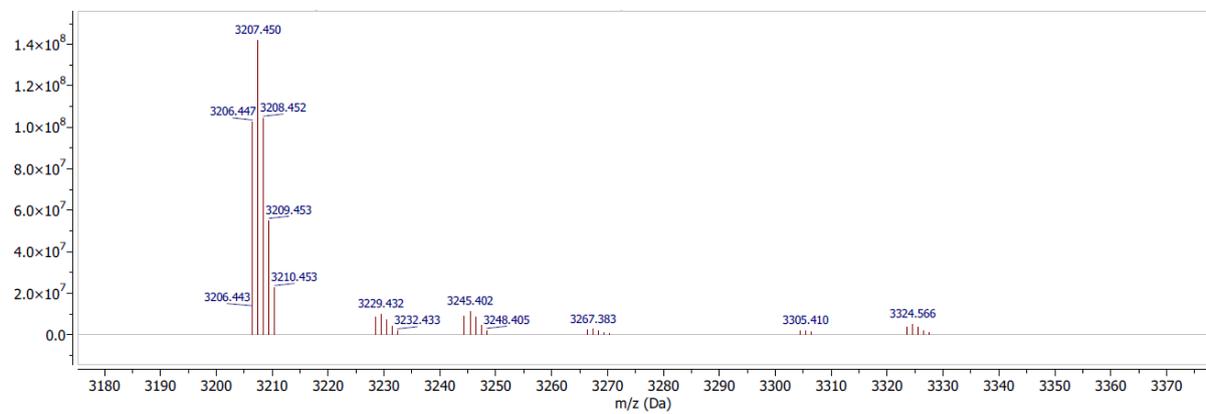

RNA 11 cleavage fragment 1 (5'-AGCCC-3') C<sub>47</sub>H<sub>61</sub>N<sub>19</sub>O<sub>32</sub>P<sub>4</sub>

Monoisotopic mass calc. 1527.268, obs. 1526.285

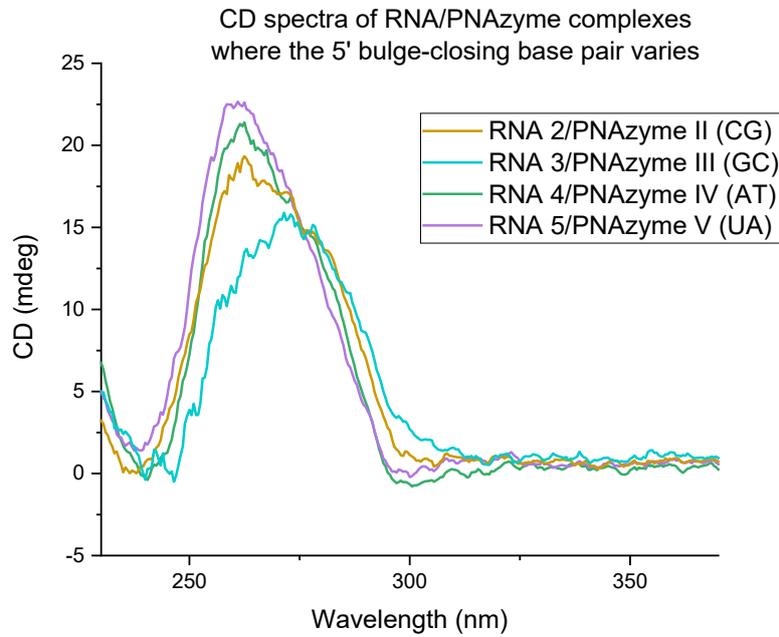

RNA 11 cleavage fragment 2 (2',3'-cyclic phosphate, 5'-AGAGUUC-UAU-3') C<sub>95</sub>H<sub>116</sub>N<sub>36</sub>O<sub>71</sub>P<sub>10</sub>

Monoisotopic mass calc. 3206.395, obs. 3206.447

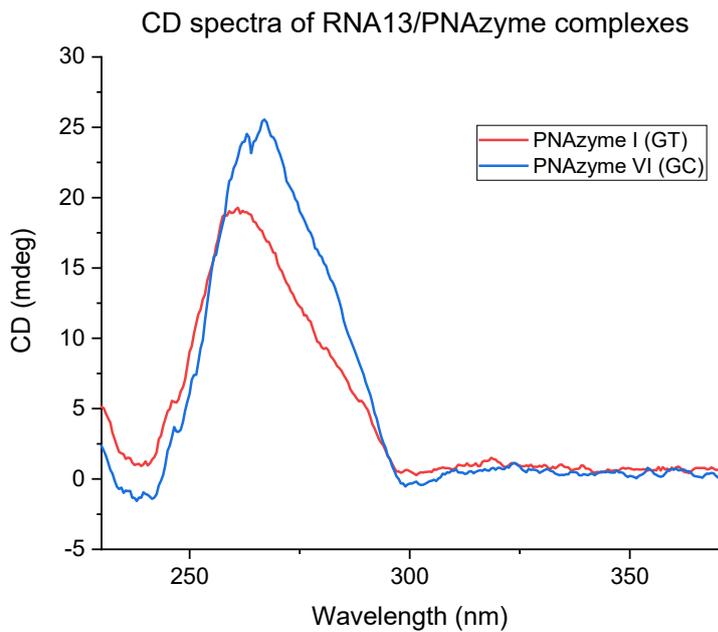

## S-4. Circular Dichroism Spectroscopy of RNA/PNAzyme complexes

### S-4.1. Complexes where the bulge-closing base pair varies in the long recognition arm

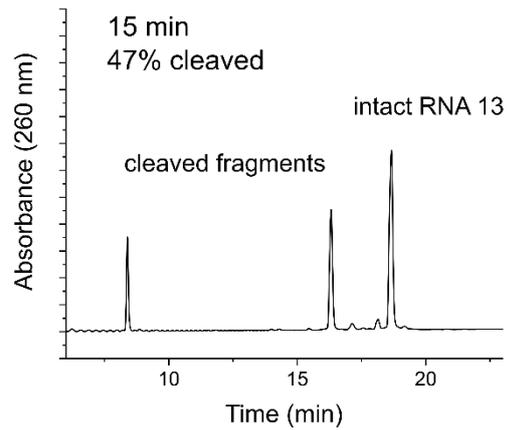

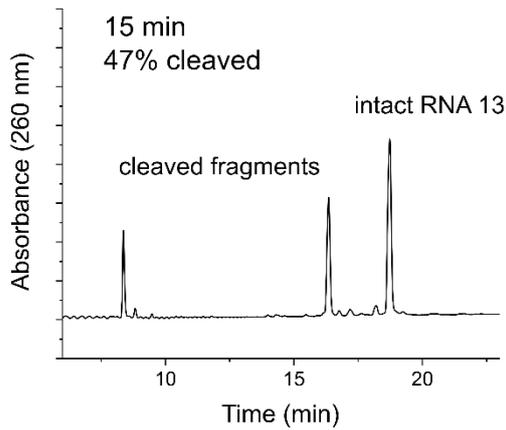

### S-4.2 Complexes with a GT wobble vs a GC Watson-Crick base pair closing the bulge in the short recognition arm

## S-5. RNA cleavage experiments in the presence of $Mg^{2+}$ and $K^+$

Extent of cleavage of RNA 13 (AUA bulge) by PNAzyme I at pH 7.0

- (a) 100  $\mu M$   $Zn(NO_3)_2$ , 10 mM HEPES, 0.1 M NaCl (b) 100  $\mu M$   $Zn(NO_3)_2$ , 10 mM HEPES, 0.1 M NaCl  
100  $\mu M$   $MgCl_2$ , 100  $\mu M$  KCl

\* (a) has been previously reported by Luige et al<sup>1</sup>
