SUPPORTING VIDEO FILES.

With the article there are 3 videoclips in support of Fig.3(b).

VideoS1(.WMV): This videoclip shows the propulsion of the hematite surface micro rollers when driven by a rotating magnetic field with frequency $f = 10$ Hz and amplitude $H = 4400$ A m $^{-1}$. The videoclip corresponds to the left panel in Fig.3(b) of the article.

VideoS2(.WMV): This videoclip shows the propulsion of the hematite surface micro rollers when driven by a rotating magnetic field with frequency $f = 100$ Hz and amplitude $H = 4400$ A m $^{-1}$. The videoclip corresponds to the middle panel in Fig.3(b) of the article.

VideoS3(.WMV): This videoclip shows the propulsion of the hematite surface micro rollers when driven by a rotating magnetic field with frequency $f = 300$ Hz and amplitude $H = 4400$ A m $^{-1}$. The videoclip corresponds to the right panel in Fig.3(b) of the article.
