**Figure S1.** (a) Scheme of the experimental procedure of Ag@nylon wire stitching on the CIP/TPU composite and (b) captured image of sewing video.

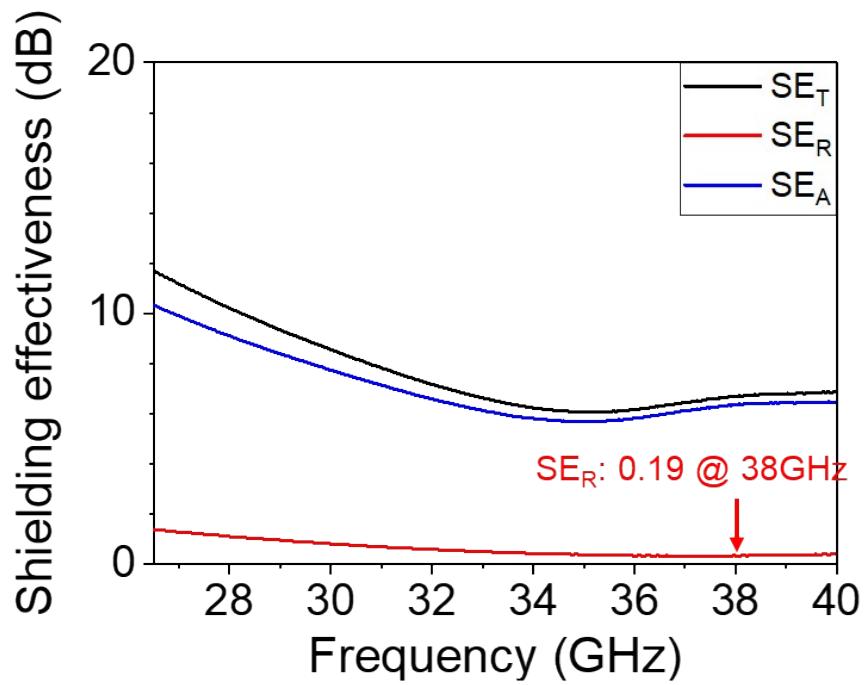

**Figure S2.** A scanning electron microscopic image (SEM image) of the proposed EMI shielding film and SEM-EDS mapping images of the film with spectra of Ag, O, Fe, and C.

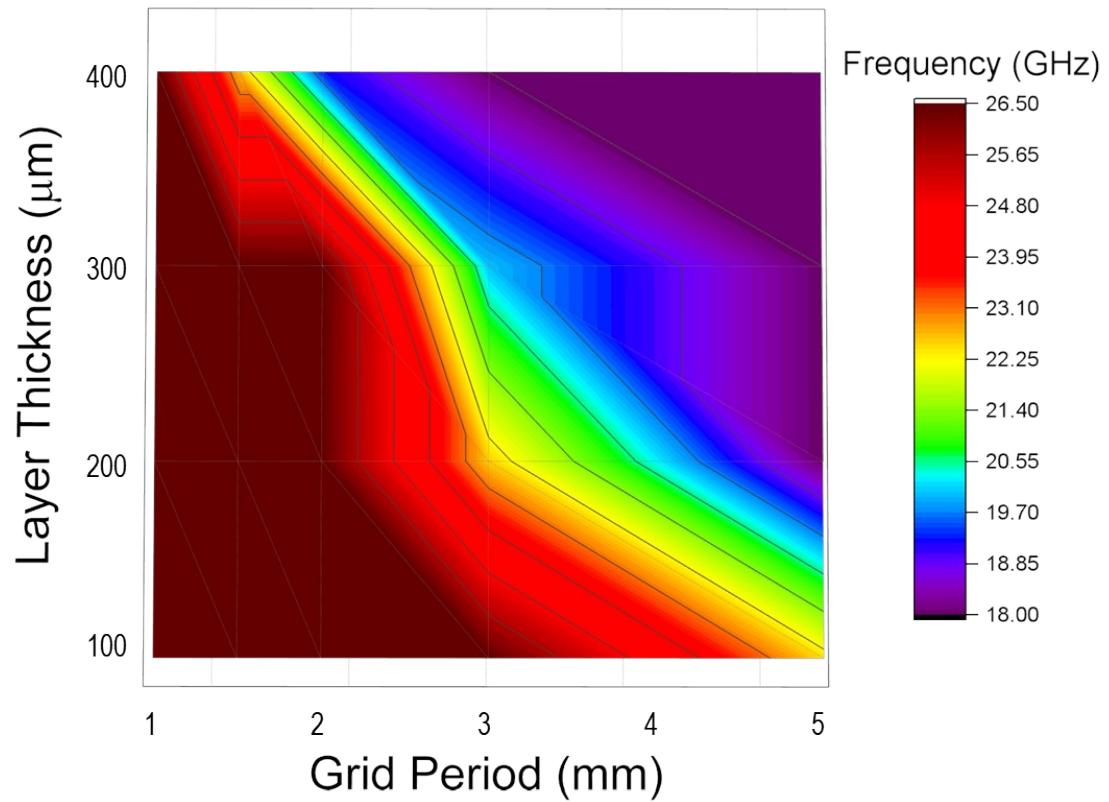

$$n = \sqrt{\mu_r \epsilon_r} = \sqrt{(1.06 + 1.078i)(14.33 + 0.2926i)} = |4.277 + 1.843i| = 4.657 \text{ @ 18 GHz, Average (K-band) } \sim 4.2$$

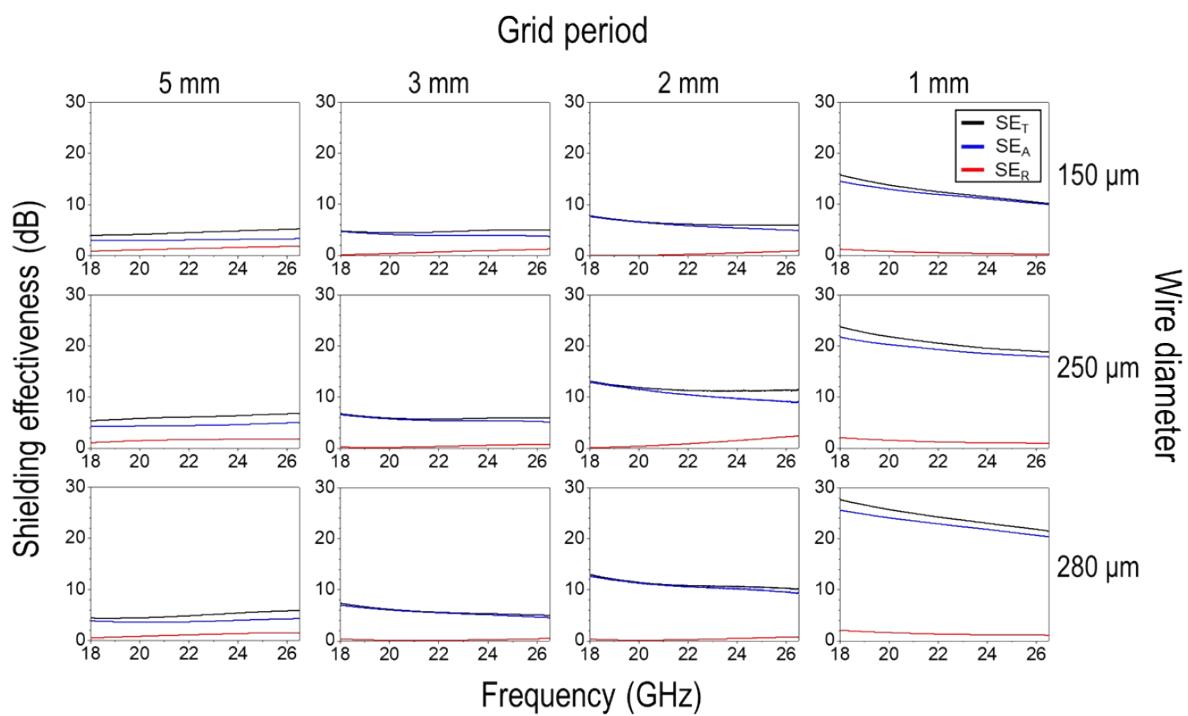

**Figure S3.** Permittivity, permeability and refractive index of CIP/TPU composite layer.

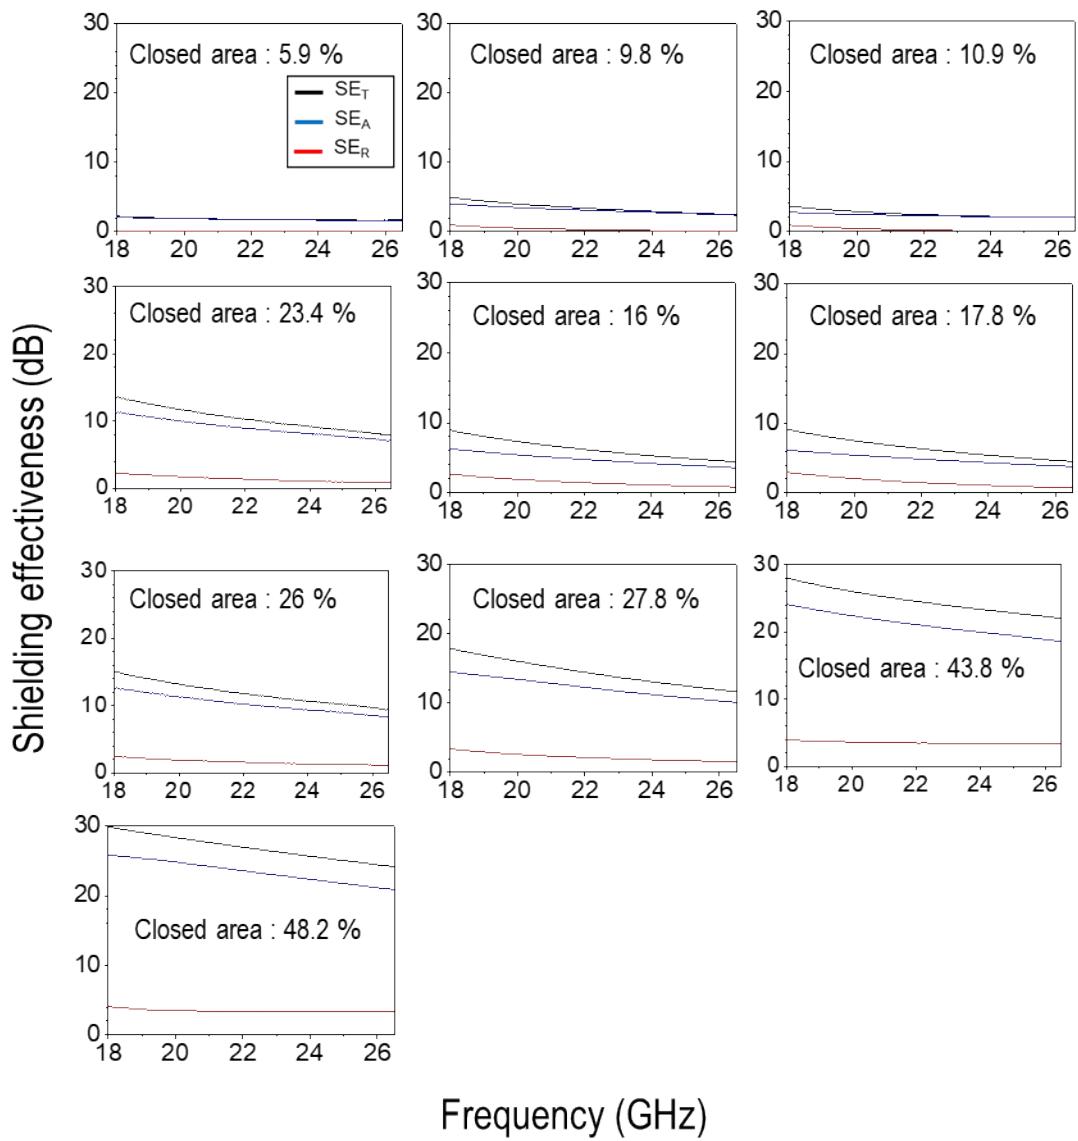

**Figure S4.** EMI shielding effectiveness of the shielding film with 1 mm grid period (Figure 3 (c)) in 26.5 – 40 GHz.

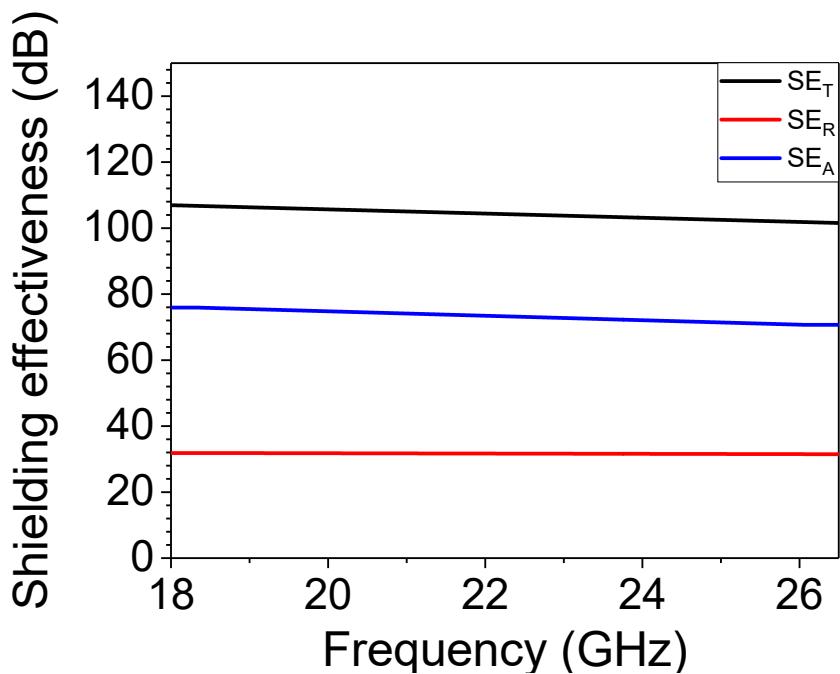

**Figure S5.** Visualized resonant frequencies of 16 different EMI shielding films with grid period from 1 to 5 mm and layer thickness from 100 to 400  $\mu\text{m}$ .

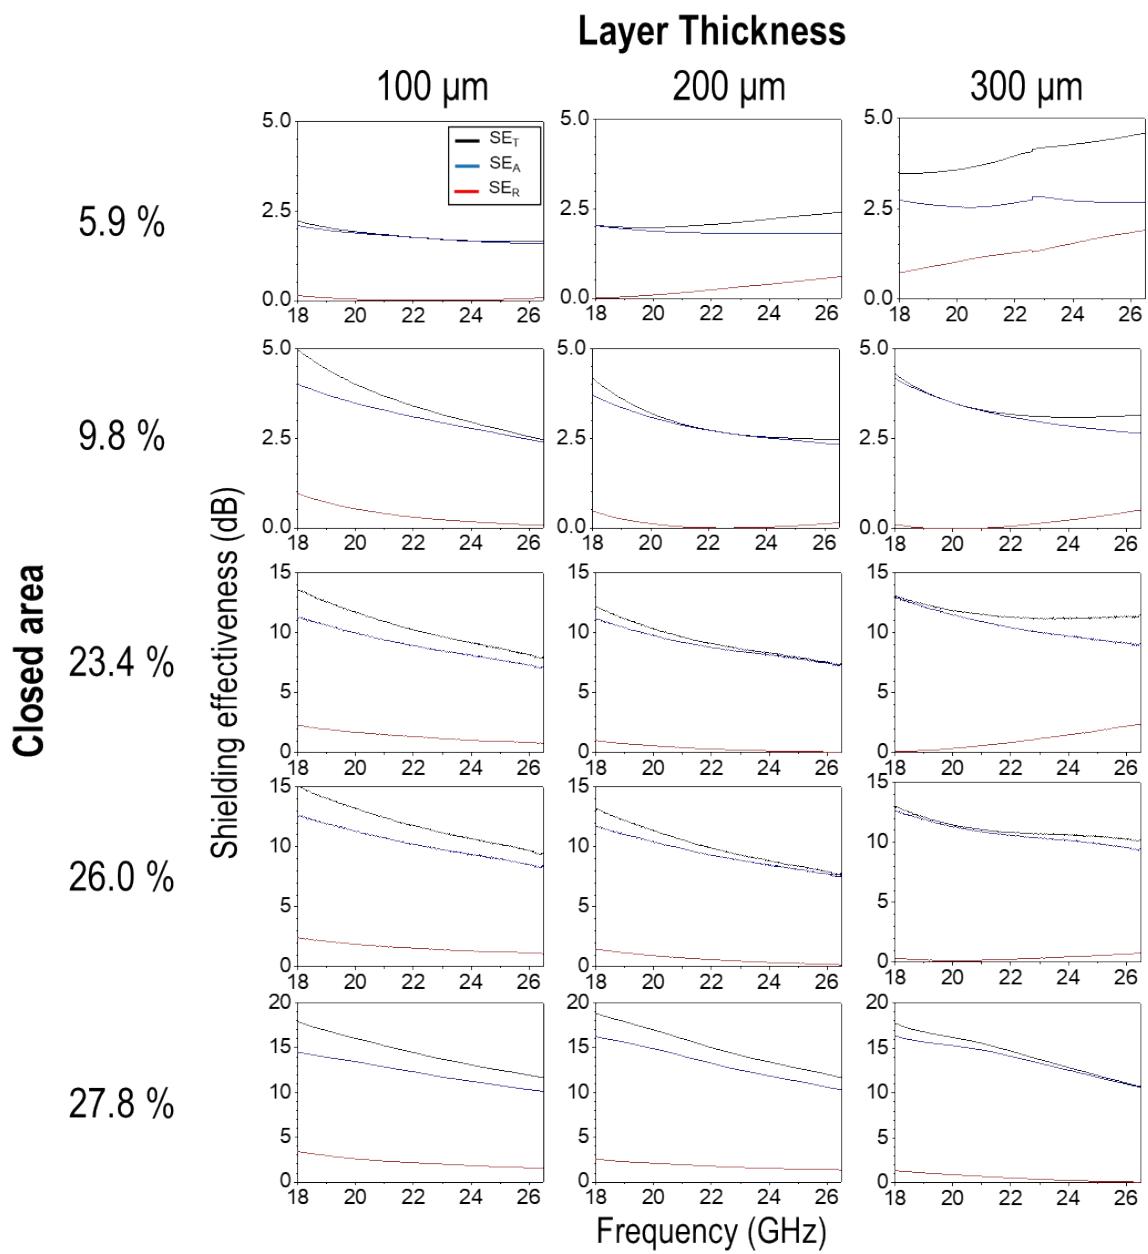

**Figure S6.** EMI shielding effectiveness of EMI shielding films with different grid geometries, grid periods (1-5 mm) and wire diameters (150-280  $\mu\text{m}$ ).

**Figure S7.** EMI shielding effectiveness of EMI shielding films with different closed areas (5.9-48.2%).

**Figure S8.** EMI shielding effectiveness of an aluminum foil.

**Figure S9.** EMI shielding effectiveness of EMI shielding films with different film structures, composite layer thickness (100-300  $\mu\text{m}$ ) and closed areas (5.9-27.8%).

**Table S1.** Comparison with the previously reported EMI shielding materials at 26 GHz
