^b Thermodynamic parameters were determined from the second cycle.

Table. S4. Mass remnant (%) and CCACP remnant (%) of scaffolds with different CCACP content.

Sample	^a Mass loss (%)	^b Mass remnant (%)	^c CCACP remnant (%)
PU_sCCACP0	4.05 \pm 0.23	95.95 \pm 0.23	
PU_sCCACP10	10.28 \pm 0.29	89.72 \pm 0.29	3.77 \pm 0.29

PU_sCCACP40	20.34 \pm 0.45	79.66 \pm 0.45	23.71 \pm 0.45

^a Mass loss was confirmed by the in vitro degradation test.

^b Mass remnant was calculated by the following formula:

$$\text{Mass remnant (\%)} = (1 - \text{Mass loss}) \times 100 \%$$

^c CCACP remnant was calculated by the following formula:

$$\text{CCACP remnant (\%)} = [\text{Original CCACP content} - (\text{Mass loss} - \text{pure scaffold mass loss})] \times 100 \%$$

Note: Pure scaffold mass loss was set as 4.05 % which was the mass loss of PUsCCACP0 scaffold.
