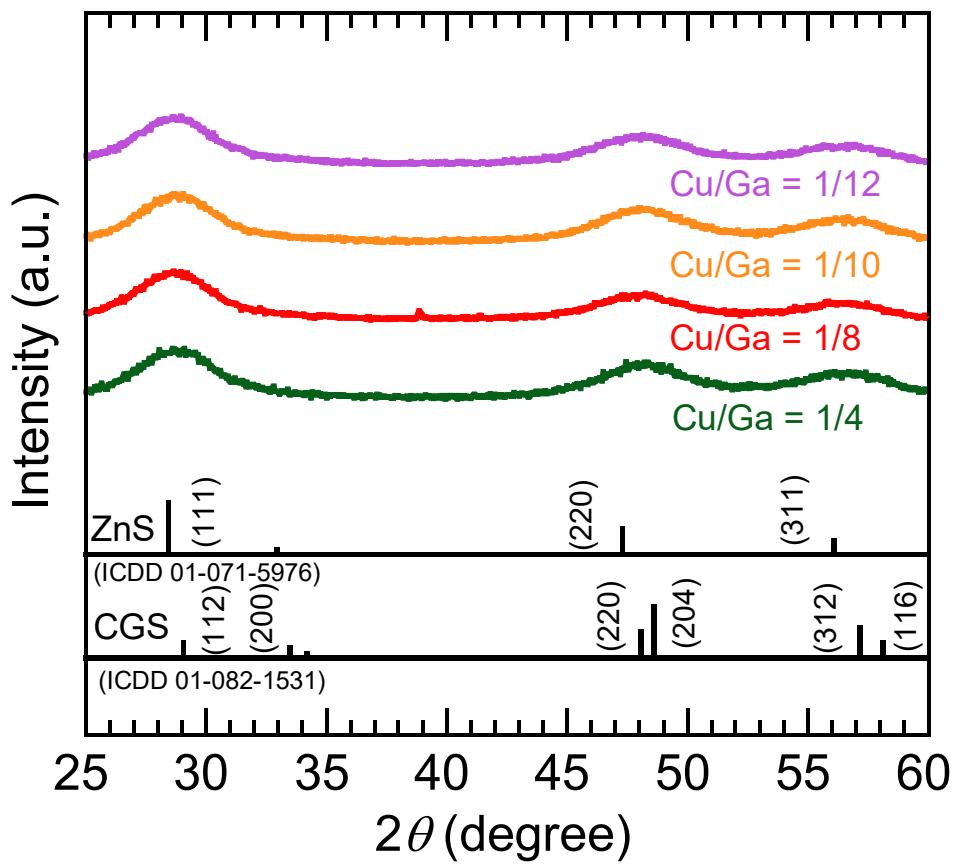

Fig. S1 XRD profiles of CGS/ZnS QDs at Cu/Ga = 1/4, 1/8, 1/10, and 1/12. ICDD data

of CGS and ZnS are also shown.

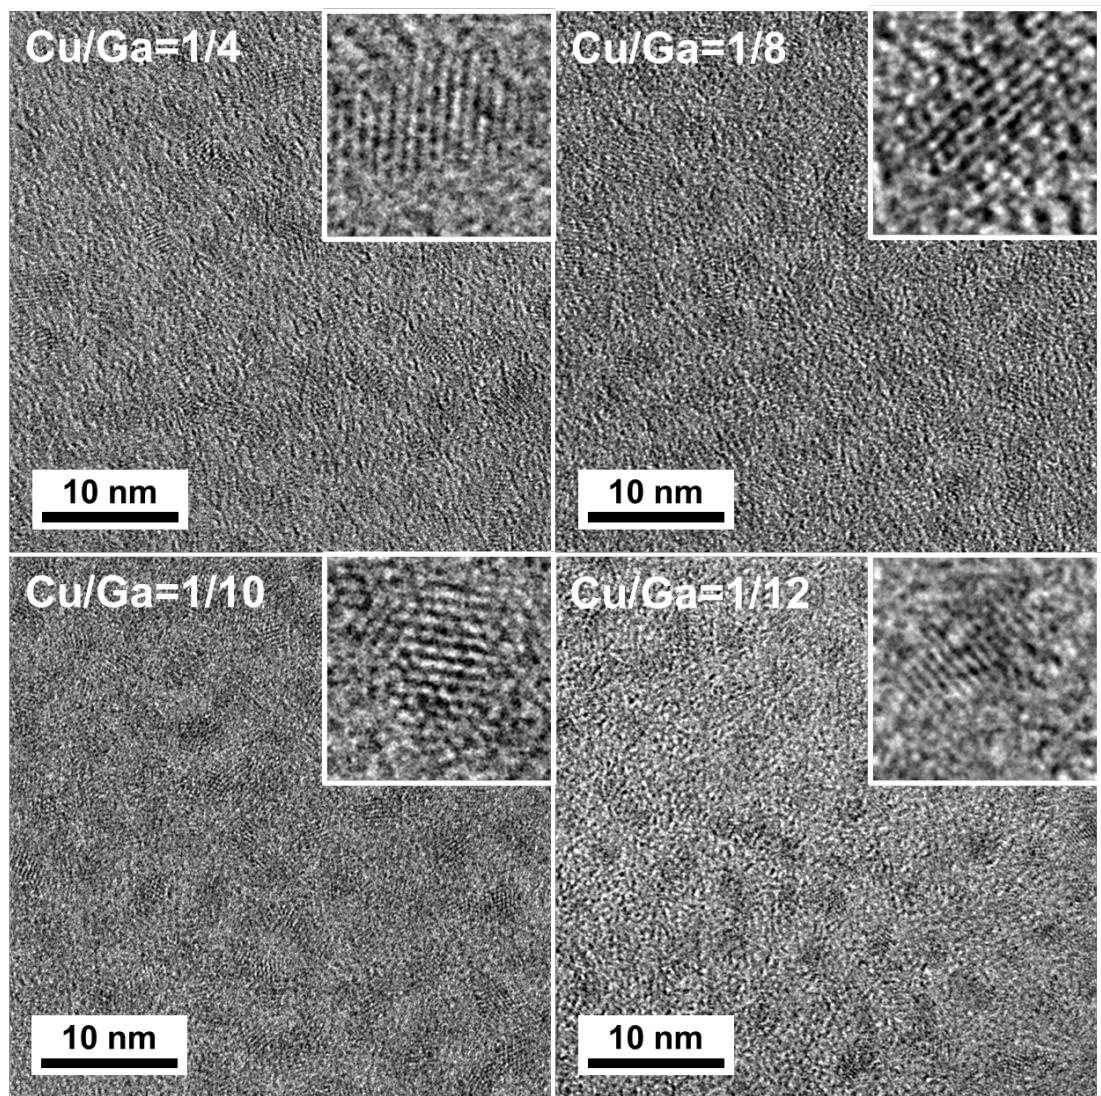

Fig. S2 High-resolution TEM images of the QDs. Observed particles were unclear due to scattering of the electron beam by the organic molecules on QDs. Lattice fringes indicate the presence of nanocrystals.

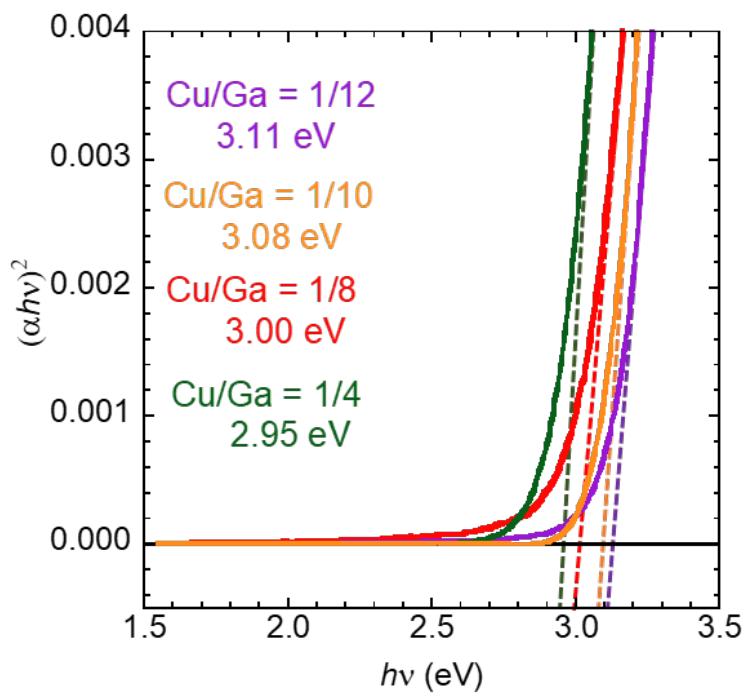

Fig. S3 Tauc plots converted from the UV-vis absorption spectra of Fig. 2.

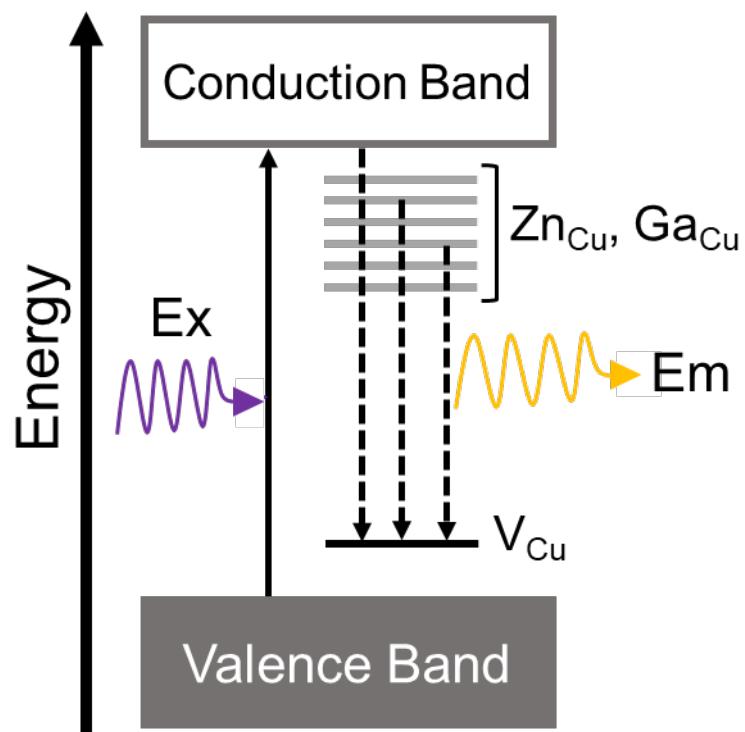

Fig. S4 Schematic illustration of the PL mechanism of CGS/ZnS QDs.^{S1}

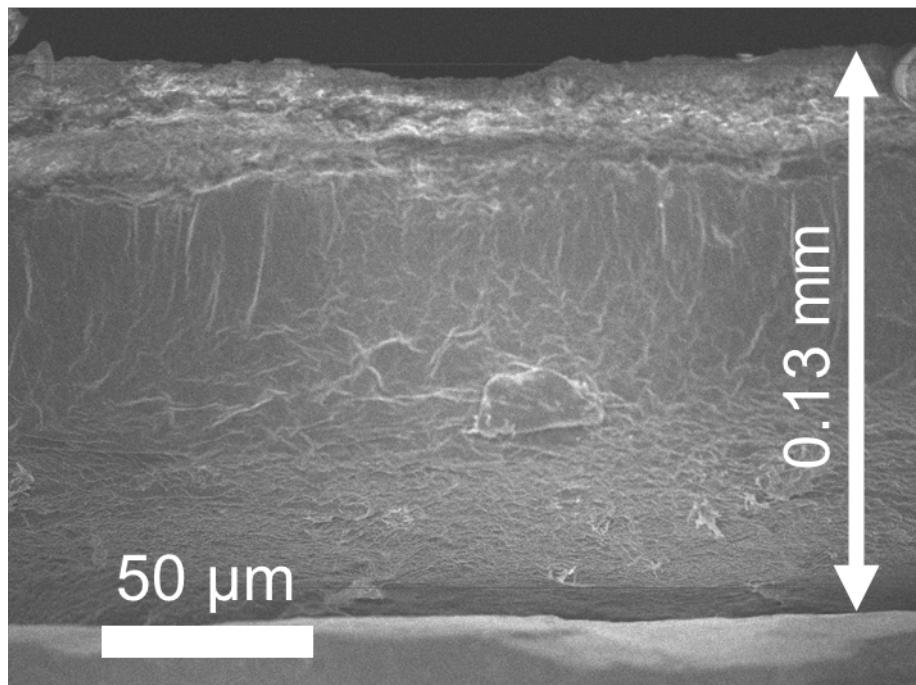

Fig. S5 Cross-sectional SEM image of a QDs@EVA film.

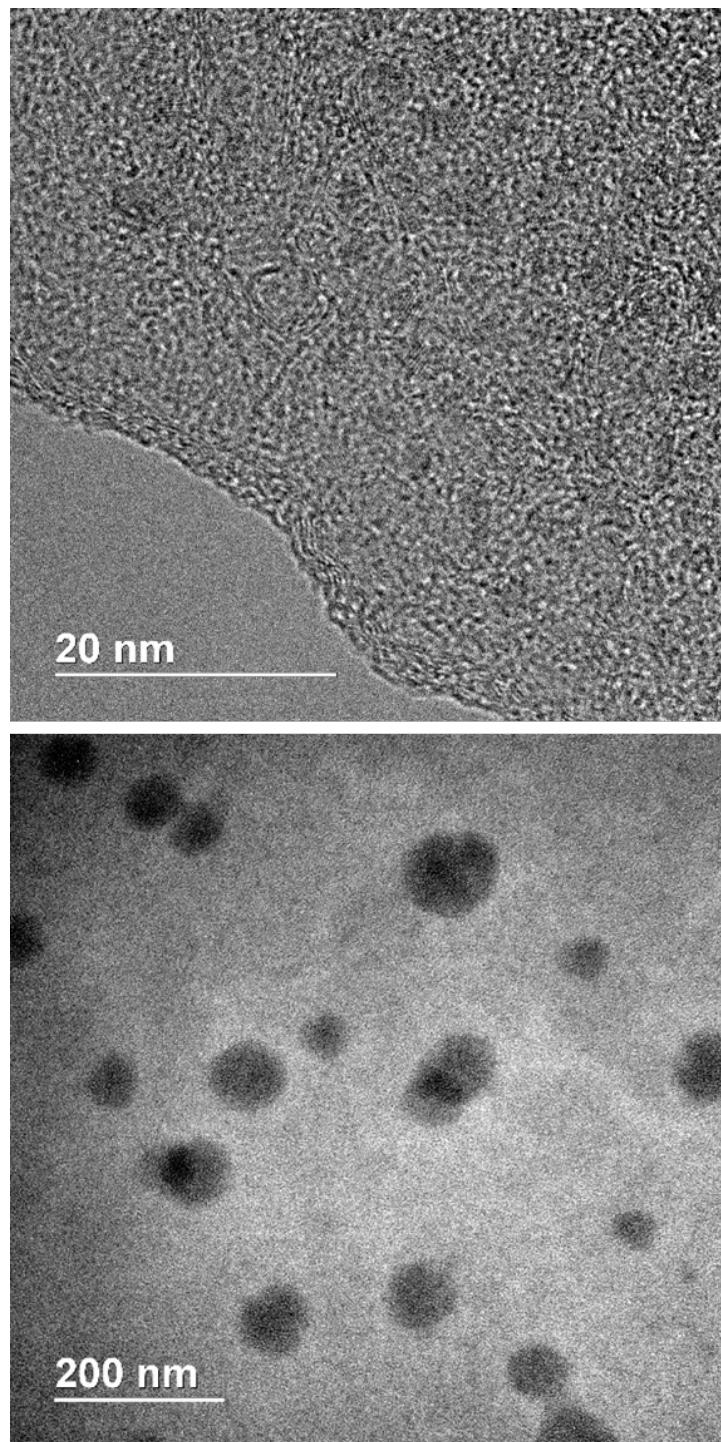

Fig. S6 TEM images of dispersed and aggregated QDs in EVA for a QDs@EVA film.

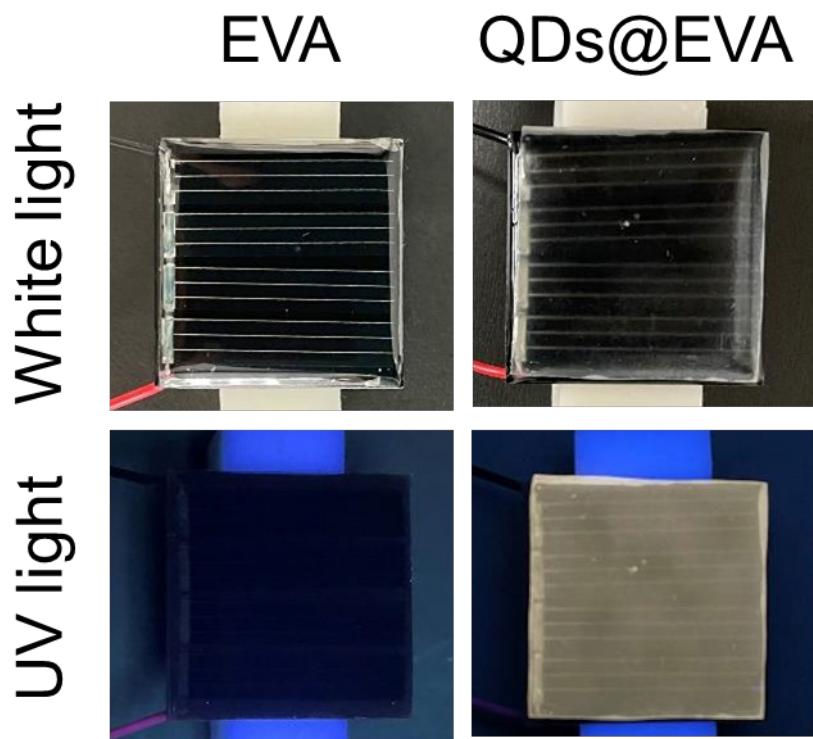

Fig. S7 Commercial c-Si solar module with a blank EVA film and a QDs@EVA film

under white light and 365 nm UV light.

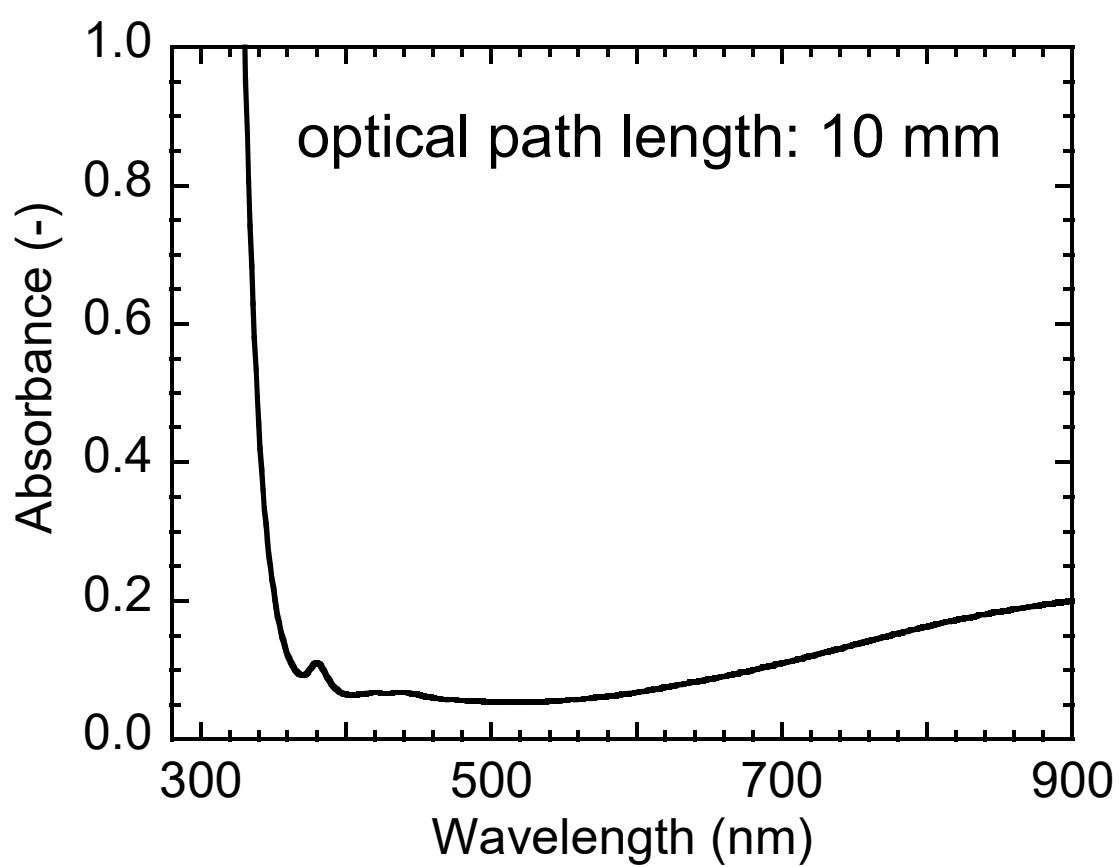

Fig. S8 UV-vis absorption spectrum of a soda glass plate for LSC.
