S1. PCA scores plot showing samples from infected cells, uninfected cells, media and *S. aureus*.

S2. Examples of total ion current chromatograms of samples, in order from top to bottom: instrument background (trap and column artefacts), PDMS sorbent material background, cell culture media (DMEM), A549 cells under normal growth conditions, *S. aureus* cultured in DMEM, and A549 cells infected with *S. aureus*.

S3. PC-DFA loadings from the first discriminant function.

S4. PC-DFA loadings from the second discriminant function.
