

**A mesoporous silica-based molecularly imprinted polymers recognition and
Mn:ZnS QDs@rhodamine B ratiometric fluorescence sensing strategy for
analysis 4-nitrophenol**

Fig. S1. Optimization of conditions for the detection of 4-NP with MIPs-coated Mn:ZnS QDs and RB co-doped MSN. The fluorescence intensity ratio between 411 nm and 582 nm at different time (a) and pH (b) after the addition of 4-NP.
