

**Different approaches for estimation of expanded uncertainty of an analytical method developed for determining pharmaceutical active compounds in wastewater using solid-phase extraction and liquid chromatography coupled with tandem mass spectrometry method**

João A. Rodrigues,<sup>a</sup> Sofia Silva,<sup>a</sup> Vitor Vale Cardoso,<sup>a</sup> Maria João Benoliel<sup>a</sup> and Cristina M. M. Almeida <sup>\*b,c</sup>

**Supplementary Material**

<b>Table S1</b>	Preliminary concentration range for the study of PhACs linearity and respective instrumental analytical thresholds
<b>Table S2</b>	PhACs linearity range studies and respective instrumental analytical thresholds – low concentration range
<b>Table S3</b>	PhACs linearity range studies and respective instrumental analytical thresholds – medium concentration range (reported LOD and LOQ for medium linear range)
<b>Table S4</b>	PhACs linearity range studies and respective instrumental analytical thresholds – high concentration range (reported LOD and LOQ for high linear range)
<b>Table S5</b>	Working range of standard addition calibration curve of PhACs in BEI WWI by SPE-UHPLC-MS/MS
<b>Table S6</b>	Working range of standard addition calibration curve of PhACs in BEI WWE by SPE-UHPLC-MS/MS
<b>Table S7</b>	Working range of standard addition calibration curve of PhACs in FNw WWI by SPE-UHPLC-MS/MS
<b>Table S8</b>	Working range of standard addition calibration curve of PhACs in FNw WWE by SPE-UHPLC-MS/MS
<b>Table S9</b>	Limits of detection (LOD) and limits of quantification (LOQ) for target PhACS determined based on calibration curve and repeatability conditions for influent (BEI WWI) and effluent (BEI WWE) wastewaters of Beirolas WWTP
<b>Table S10</b>	Limits of detection (LOD) and limits of quantification (LOQ) for target PhACS determined based on calibration curve and repeatability conditions for influent (FNw WWI) and effluent (FNw WWE) wastewaters of Faro NW WWTP
<b>Table S11</b>	Absolute recovery of PhACs in influent and effluent wastewater of Beirolas WWTP by SPE-UHPLC-MS/MS
<b>Table S12</b>	Absolute recovery of PhACs in influent and effluent wastewater of Faro NW WWTP by SPE-UHPLC-MS/MS
<b>Table S13</b>	Precision of the SPE-UHPLC-MS/MS method at two concentration levels ( $n = 10$ ) under repeatability conditions
<b>Table S14</b>	Individual uncertainty components and respective expanded uncertainty estimated in the analysis of the 24 PhACs in wastewater influents from Beirolas WWTP by SPE-UHPLC-MS/MS.
<b>Table S15</b>	Individual uncertainty components and respective expanded uncertainty estimated in the analysis of the 24 PhACs in wastewater effluents from Beirolas WWTP by SPE-UHPLC-MS/MS.
<b>Table S16</b>	Individual uncertainty components and respective expanded uncertainty estimated in the analysis of the 24 PhACs in wastewater influents from Faro NW WWTP by SPE-UHPLC-MS/MS.
<b>Table S17</b>	Individual uncertainty components and respective expanded uncertainty estimated in the analysis of the 24 PhACs in wastewater effluents from Faro Nw WWTP by SPE-UHPLC-MS/MS.
