Text 1. Synthesis of MoS₂ with different S/Mo precursor atomic ratio

For the synthesis of MoS₂ using S/Mo precursor atomic ratios of 1:1, 3:1, 5:1, 10:1, a certain amount of thioacetamide and ammonium heptamolybdate tetrahydrate were dissolved in 24 mL deionized water. The mixture was stirred in a magnetic stirring apparatus for 1h, and the mixed solution was then transferred to a 50 mL Teflon-lined stainless-steel autoclave and heated at 180 °C, 200 °C, 220 °C or 240 °C for 12 h. After the reaction, the system was terminated by natural cooling to room temperature. The as-synthesized MoS₂ was collected in a centrifuge tube and washed with deionized water and ethanol several times by repeatedly centrifuging, decanting the liquid, and resuspending the solids. The purified samples were stored in DI water in an N₂-filled glove-box. The addition of thioacetamide and ammonium heptamolybdate tetrahydrate was listed in Table S1.

Table S1 Synthesis of MoS₂ with different S/Mo precursor atomic ratio

S/Mo	1:1	2:1	3:1	5:1	10:1
Thioacetamide/mmol	8.60	17.17	20.23	20.23	20.23
Ammonium heptamolybdate tetrahydrate/mmol	1.23	1.23	0.96	0.58	0.29

Figure S19. Crystal structure of 1T-MoS₂ in (a) the x-y plane and (b) the z direction (Yellow circles represent Mo atoms, blue circles represent S atoms). For as-synthesized 1T-MoS₂, an ~8 % weight loss was detected in the heating process at ~ 100°C. The lattice parameters of 1T-MoS₂ are $a=b=3.25\text{\AA}$, $c=6.14\text{\AA}$, $\alpha=\beta=90^\circ$, $\gamma=120^\circ$. The area of the 9-lattice crystal plane is $9.506 \times 10^{-19}\text{ m}^2$. There are 16 molecules of MoS₂ in a 9-lattice unit cell, and 8 % of the total mass is accounted for by about 11.4 water molecules. The volume of a single water molecule is $3 \times 10^{-29}\text{ m}^3$, so the volume of 11.4 water molecules is $3.42 \times 10^{-28}\text{ m}^3$. If they

are uniformly distributed throughout the crystal plane, the interlayer will increase by $\frac{3.42 \times 10^{-28}}{9.506 \times 10^{-19}} = 0.36\text{ nm}$.
