VT-NMR lineshape analysis was performed using equations derived from Bloch equations modified to include a pseudo-first order decay term.^{1,2} Each signal was fit to a Lorentzian shape in MestReNova Software.³ Using an estimation of the transverse relaxation (T_2^{eff}) in the absence of exchange from the full width at half max (fwhm) of a non-exchanging proton signal (equation 1), the pseudo-first order rate constant (k) can be calculated from the fwhm for the subsequent signal (Eq 2).

$$T_2^{eff} = \frac{1}{\pi [fwhm]} \quad (1)$$

$$k = \pi [fwhm - \frac{1}{\pi T_2^{eff}}] \quad (2)$$

Following determination of k , a plot of $\ln(k/T)$ versus $1/T$ was used to extract activation parameters using the following equations:

$$\ln\left(\frac{k}{T}\right) = \frac{\Delta H^\ddagger}{R} * \frac{1}{T} + \ln\left(\frac{k_b}{h}\right) + \frac{\Delta S^\ddagger}{R} \quad (3)$$

Where:

$$Slope = \frac{\Delta H^\ddagger}{R} \quad (4)$$

$$Intercept = \ln\left(\frac{k_b}{h}\right) + \frac{\Delta S^\ddagger}{R} \quad (5)$$

Constants used:

$$k_b = 1.38 \times 10^{-23} \text{ J-K}^{-1}$$

$$h = 6.63 \times 10^{-34} \text{ J-s}$$

$$R = 1.98 \text{ cal K}^{-1}\text{-mol}^{-1}$$

Table S1. EPR simulation parameters for [CuCl(dpa^{OMe})]PF₆.

	g_{\perp} 2.04	g_{\parallel} 2.25	
Cu	24	464	MHz
N(1)	48	5	MHz
N(2)	47	11	MHz
N(3)	40	8	MHz

Table S2. EPR simulation parameters for CuCl₂(dpa^H).

	g_1 2.02	g_2 2.12	g_3 2.25	
Cu	51	130	437	MHz
N(1)	58	54	25	MHz
N(2)	60	55	35	MHz
N(3)	59	55	30	MHz

Table S3. Peak^a integrations obtained from DPV for CuCl(dpa^{OMe}) and CuCl(dpa^H).

CuCl(dpa ^{OMe})			CuCl(dpa ^H)		
	$E_{p1}^{\circ'}$	$E_{p2}^{\circ'}$		$E_{p1}^{\circ'}$	$E_{p2}^{\circ'}$
1.4 mM	9.17×10^{-7}	9.33×10^{-7}	0.6 mM	6.37×10^{-7}	7.67×10^{-7}
2.8 mM	1.62×10^{-6}	1.30×10^{-6}	1.2 mM	1.36×10^{-6}	9.14×10^{-7}
7.0 mM	2.87×10^{-5}	1.72×10^{-6}	5.0 mM	2.39×10^{-6}	1.04×10^{-6}

^a $E_{p1}^{\circ'}$ and $E_{p2}^{\circ'}$ refer to the oxidative peak potentials measured by DPV.

Table S4. Parameters obtained from simulated CVs of CuCl(dpa^{OMe}) and [CuCl(dpa^{OMe})]⁺.

	CuCl(dpa ^{OMe})		[CuCl(dpa ^{OMe})] ⁺ [PF ₆] ⁻	
	$E_1^{o'}$	$E_2^{o'}$	$E_1^{o'}$	$E_2^{o'}$

Figure S1. Mass spectrum of $\text{CuCl}(\text{dpa}^{\text{OMe}})$ in DCM.

Figure S2. Mass spectrum of $\text{CuCl}(\text{dpa}^{\text{H}})$ in DCM.

Figure S3. Overlaid ¹H-NMR spectrum of CuCl(dpa^{OMe}) (black) and dpa^{OMe} ligand (red) in *d*₆-DMSO at 298 K.

Figure S4. Overlaid ¹H-NMR spectrum of CuCl(dpa^H) (black) and dpa^H ligand (red) in *d*₆-DMSO at 298 K.

Figure S5. CV recorded with 1 mM ligand dpa^{OMe} concentration with 100 mM $[\text{NBu}_4][\text{PF}_6]$ electrolyte in dry degassed DMF under a nitrogen atmosphere using a 3 mm glassy carbon working electrode, Pt wire counter electrode and $\text{Ag}^{+/0}$ pseudo-reference electrode at room temperature with 100 mVs^{-1} scan rate.

Figure S6. CV scan rate dependencies of a) $\text{CuCl}(\text{dpa}^{\text{OMe}})$ and b) $[\text{CuCl}(\text{dpa}^{\text{OMe}})][\text{PF}_6]$ at 25, 50, 75, 100, 150, 200, 300, 400 and 500 mV sec^{-1} scan rates. Cyclic voltammograms were recorded with 1 mM analyte and 100 mM $[\text{NBu}_4][\text{PF}_6]$ electrolyte in dry degassed DMF under a nitrogen atmosphere using a 3 mm glassy carbon working electrode, Pt wire counter electrode and $\text{Ag}^{+/0}$ pseudo-reference electrode at ambient temperature.

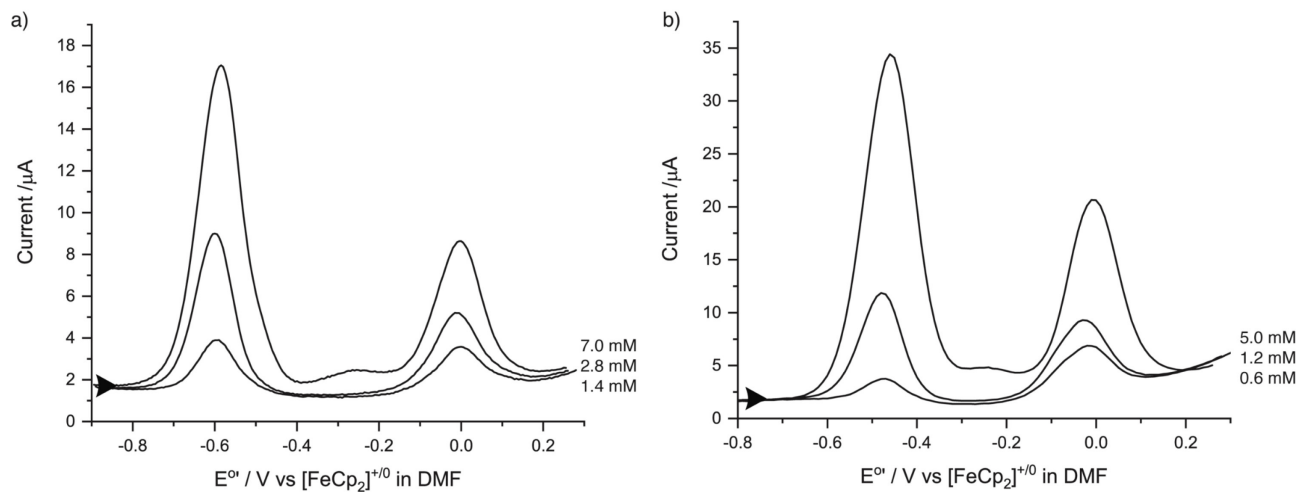

Figure S7. Differential pulse voltammograms for a) $\text{CuCl}(\text{dpa}^{\text{OMe}})$ at 1.4 mM, 2.8 mM and 7.0 mM concentrations and b) $\text{CuCl}(\text{dpa}^{\text{H}})$ at 0.6 mM, 1.2 mM and 5 mM in DMF at ambient temperatures. Data were collected using the same solution conditions to cyclic voltammograms.

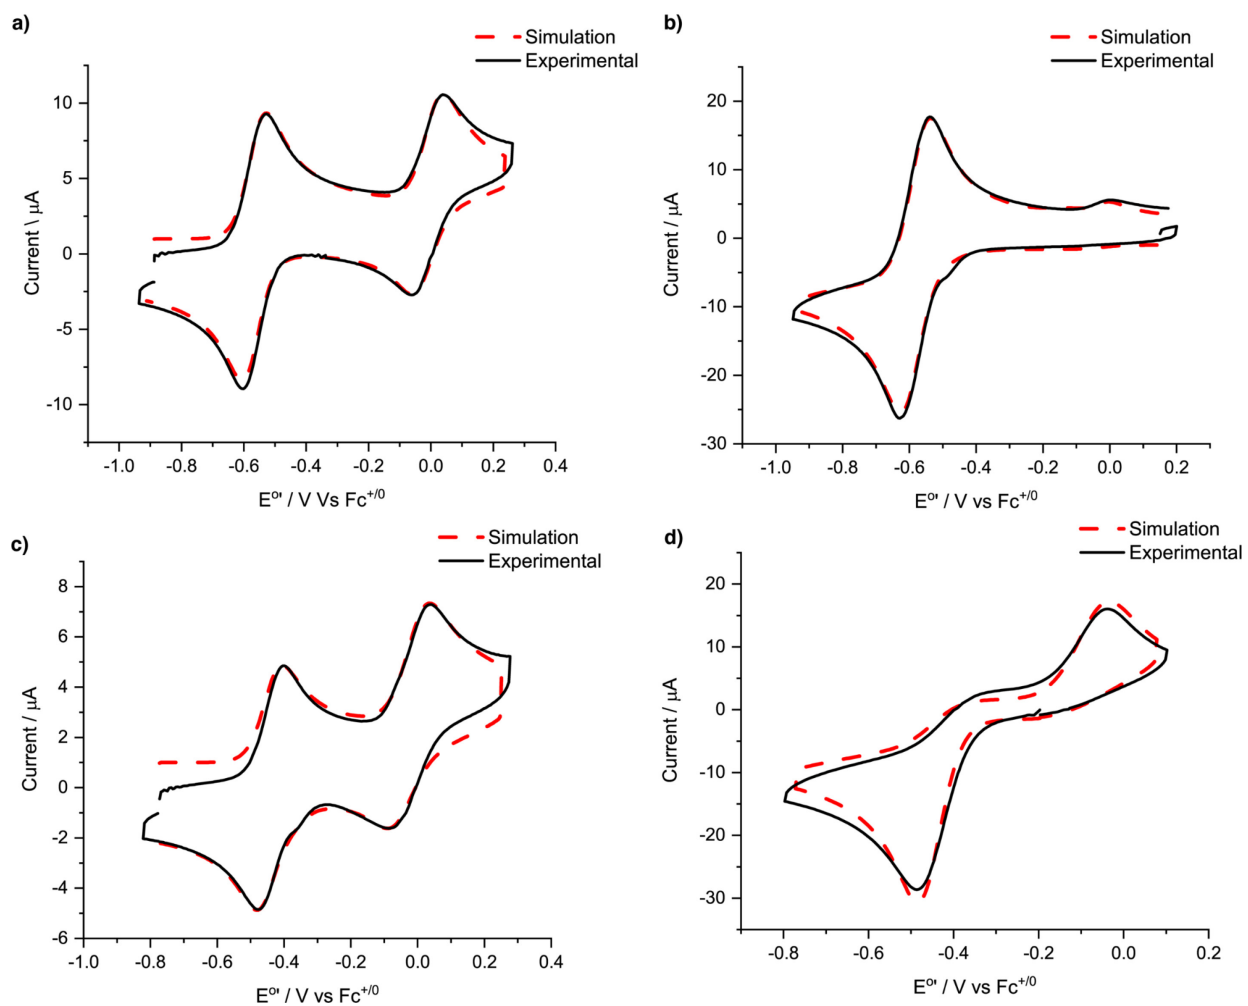

Figure S8. CV simulations on 1 mM solutions of a) $\text{CuCl}(\text{dpa}^{\text{OMe}})$, b) $[\text{CuCl}(\text{dpa}^{\text{OMe}})][\text{PF}_6]$, c) $\text{CuCl}(\text{dpa}^{\text{H}})$ and d) $\text{CuCl}_2(\text{dpa}^{\text{H}})$ performed using BASi DigiElch 8.0 with simulated spectra in red dashed lines and experimental spectra in black solid lines.

Figure S9. CV scan rate dependencies of a) $\text{CuCl}(\text{dpa}^{\text{H}})$ and b) $\text{CuCl}_2(\text{dpa}^{\text{H}})$ at 25, 50, 75, 100, 150, 200, 300, 400 and 500 mV sec^{-1} scan rates. Cyclic voltammetry were recorded with 1 mM analyte concentration with 100 mM $[\text{NBu}_4][\text{PF}_6]$ electrolyte in dry degassed DMF under a nitrogen atmosphere using a 3 mm glassy carbon working electrode, Pt wire counter electrode and $\text{Ag}^{+/0}$ pseudo-reference electrode at ambient temperature.

Figure S10. $^1\text{H-NMR}$ spectrum of $\text{CuCl}(\text{dpa}^{\text{OMe}})$ in $d_6\text{-DMSO}$ at 298 K.

Figure S11. ^{13}C -NMR spectrum of $\text{CuCl}(\text{dpa}^{\text{OMe}})$ in d_6 -DMSO at 298 K.

Figure S12. ^1H -NMR spectrum of $\text{CuCl}(\text{dpa}^{\text{H}})$ in d_6 -DMSO at 298 K.

Figure S13. ^{13}C -NMR spectrum of $\text{CuCl}(\text{dpa}^{\text{H}})$ in d_6 -DMSO at 298 K.

Figure S14. ¹H-NMR spectra (500 MHz) of CuCl(dpa^{OMe}) in *d*₂-DCM over the temperature range of 238-298 K.

Figure S15. Plot of $\ln(k/T)$ versus $1/T$ (where k = rate constant and T = temperature in K) for the dynamic NMR process of $\text{CuCl}(\text{dpa}^{\text{OMe}})$ in $\text{d}_2\text{-DCM}$ from 238-298 K. The shown linear fit was used to calculate the activation parameters listed in the main text via the Eyring equation ($R^2 = 0.9766$).

Figure S16. ¹H-NMR spectra (500 MHz) of CuCl(dpa^H) in *d*₂-DCM over the temperature range of 238–298 K.

Figure S17. Plot of $\ln(k/T)$ versus $1/T$ (where k = rate constant and T = temperature in K) for the dynamic NMR process of $\text{CuCl}(\text{dpa}^{\text{H}})$ in d_2 -DCM from 238–298 K. The shown linear fit was used to calculate the activation parameters listed in the main text via the Eyring equation ($R^2 = 0.96445$).

Figure S18. Extinction coefficient plots for $[\text{CuCl}(\text{dpa}^{\text{OMe}})][\text{PF}_6]$ (green), $\text{CuCl}(\text{dpa}^{\text{H}})$ (blue) and $\text{CuCl}(\text{dpa}^{\text{OMe}})$ (orange) in DCM. Inset: Zoomed in region of $[\text{CuCl}(\text{dpa}^{\text{OMe}})][\text{PF}_6]$ spectra from 400–900 nm.
