## This PDF file includes:

Figures S1 to S5 and Table S1 to S2

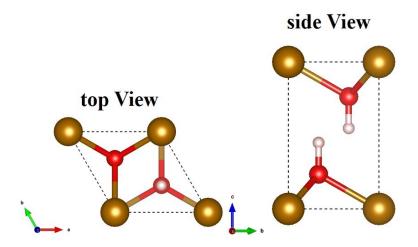

Fig. S1. DFT-optimized crystal structure of  $Fe(OH)_2$ ; Fe = orange spheres, O= red spheres and H= white spheres.

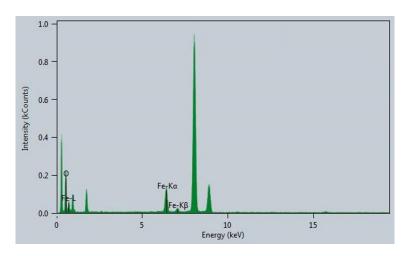

Fig. S2. The elemental spectroscopy of as-prepared  $Fe(OH)_2$ .

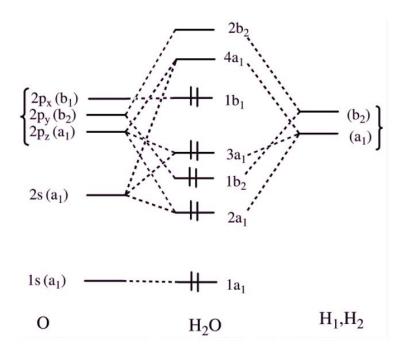

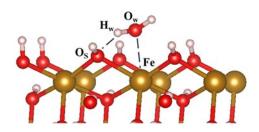

Fig. S3. The schematic diagram for molecular orbitals of free water molecule.

**Fig. S4.** The DFT-optimized atomic configurations of two atom pairs for COHP and ICOHP calculation, when H<sub>2</sub>O was adsorbed on (100) facet of Fe(OH)<sub>2</sub>.

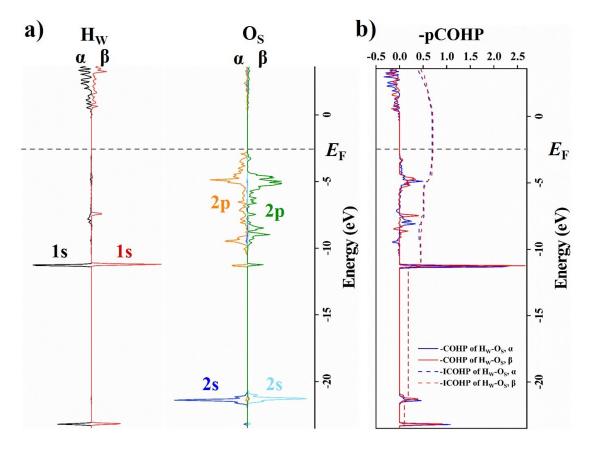

Fig. S5. Projected electronic densities of states (pDOS) of 1s orbital of  $H_W$ , 2s and 2p orbitals of  $O_S$  on  $Fe(OH)_2$  (100) facet after  $H_2O$  adsorption. b) The crystal orbital hamilton population (COHP) and integrated COHP (ICOHP) density between  $H_W$  and  $O_S$ .  $\alpha$  = spin up and  $\beta$  = spin down.

**Table S1**. The comparison of  $H_2O$  morphology before and after adsorbed on different facets of  $Fe(OH)_2$ .

| Facet              | (100) | (101) | (102) | Free water |
|--------------------|-------|-------|-------|------------|
|                    |       |       |       | molecule   |
| Angel/o            | 105.7 | 104.9 | 105.4 | 104.5      |
| $O-H_1/\text{\AA}$ | 1.015 | 0.994 | 0.976 | 0.973      |
| $O-H_2/Å$          | 0.973 | 0.975 | 0.974 | 0.973      |

**Table S2**. The Bader charge of free  $H_2O$  molecule and after adsorbed on different surfaces of  $Fe(OH)_2$ .

| G 1 -                          | Bader charge (electrons) |       |      |       |  |
|--------------------------------|--------------------------|-------|------|-------|--|
| Sample                         | $H_1$                    | $H_2$ | О    | Total |  |
| (100)                          | 0.33                     | 0.26  | 7.43 | 8.02  |  |
| (101)                          | 0.33                     | 0.32  | 7.34 | 7.99  |  |
| (102)                          | 0.34                     | 0.36  | 7.28 | 7.98  |  |
| Free H <sub>2</sub> O molecule | 0.33                     | 0.31  | 7.36 | 8.00  |  |
