

Supplementary figures

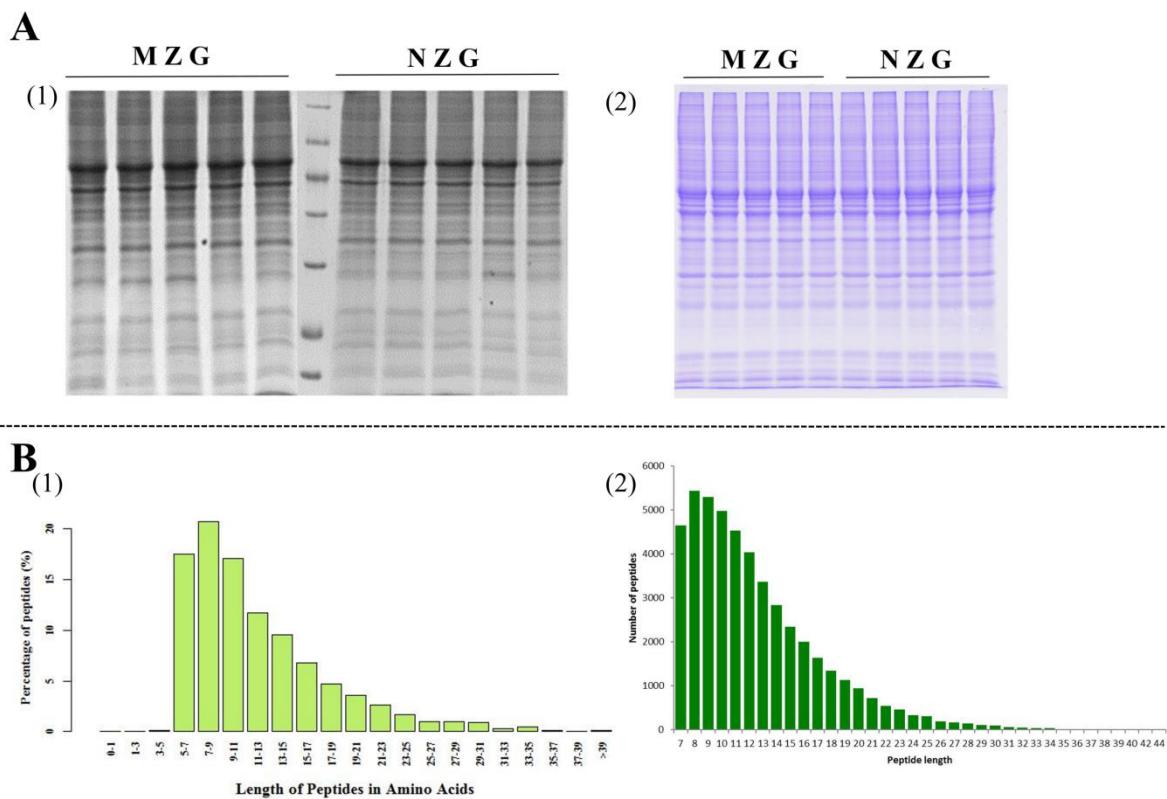

Supplemental figure-1 Results of HE staining in the second animal experiment ($\times 200$, $X=100 \mu\text{m}$).

A: Marginal zinc-deficient group (MZG), B: Normal zinc group (NZG), C: Paired zinc group (PZG).

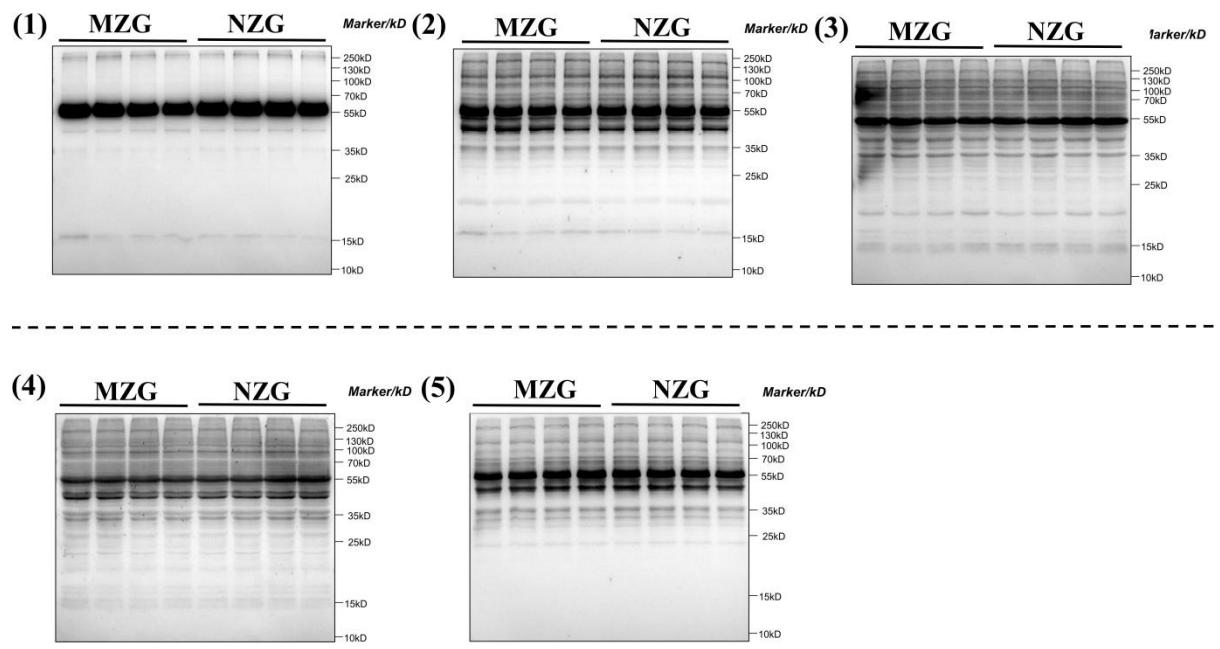

Supplemental figure-2 Quantitative analysis results of the Nissl staining.

MZG: Marginal zinc-deficient group, PZG: Paired zinc group, NZG: Normal zinc group.

Supplemental figure-3 Quality control validation of protein extraction and MS data.

A: quality control of protein extraction (SDS-PAGE of coomassie brilliant blue staining), B: mass spectrometry data validation (peptide length distribution); (1) hippocampal proteomics analysis after 4 weeks of feeding with the low zinc diet. (2) hippocampal proteomics analysis after 8 weeks of feeding with the low zinc diet.

Supplemental figure-4 Acetylation, crotonylation, 2-hydroxyisobutyrylation, succinylation and malonylation of whole proteins in hippocampus between MZG and NZG.

(1) acetylation (2) crotonylation (3) 2-hydroxyisobutyrylation (4) succinylation (5) malonylation

Supplemental table-1 Significant differential proteins with the fold change greater than 1.2 in hippocampus after 4 weeks feeding of low zinc diet.
