

## Supplementary Materials

### NiOOH@Cobalt Copper Carbonate Hydroxide Nanorods as Bifunctional Catalysts for Highly Efficient Water and Hydrazine Oxidation

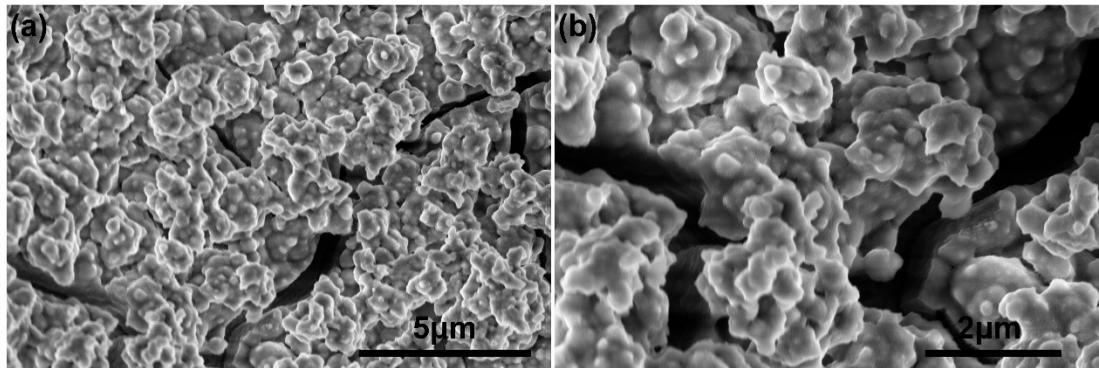

Bin Li,<sup>a,b</sup> Kefeng Wang,<sup>b\*</sup> Jingxiao Ren,<sup>b</sup> Peng Qu<sup>a,b</sup>

<sup>a</sup> College of Chemistry, Zhengzhou University, Zhengzhou 450002, China

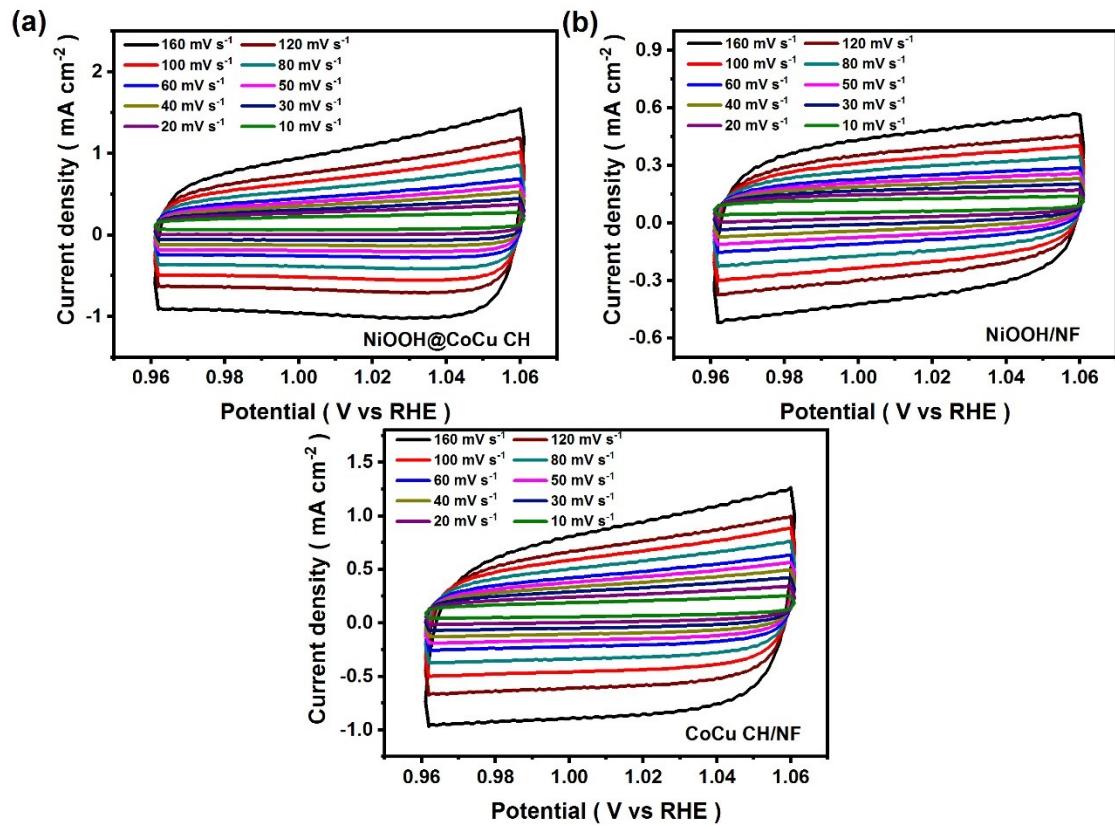

<sup>b</sup> Henan Engineering Center of New Energy Battery Materials, College of Chemistry and Chemical Engineering, Shangqiu Normal University, Shangqiu 476000, Henan, China

**Figure S1** XRD pattern of NiOOH@CoCu CH powder with the deposition time of NiOOH prolonged to 30 min, and the standard patterns of orthorhombic cobalt copper carbonate hydroxide (JCPDS no. 48-0084) and nickel oxide hydroxide (JCPDS no. 27-0956).

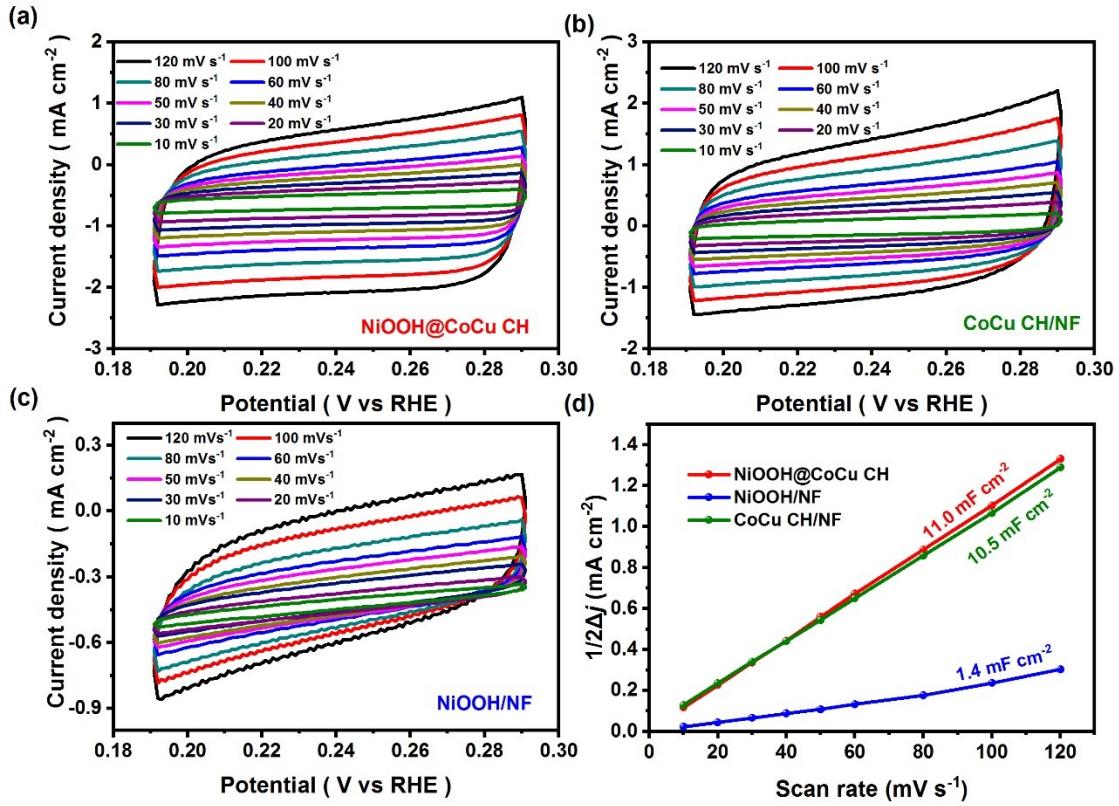

**Figure S2** SEM images of NiOOH directly deposited on nickel foam (NiOOH/NF)

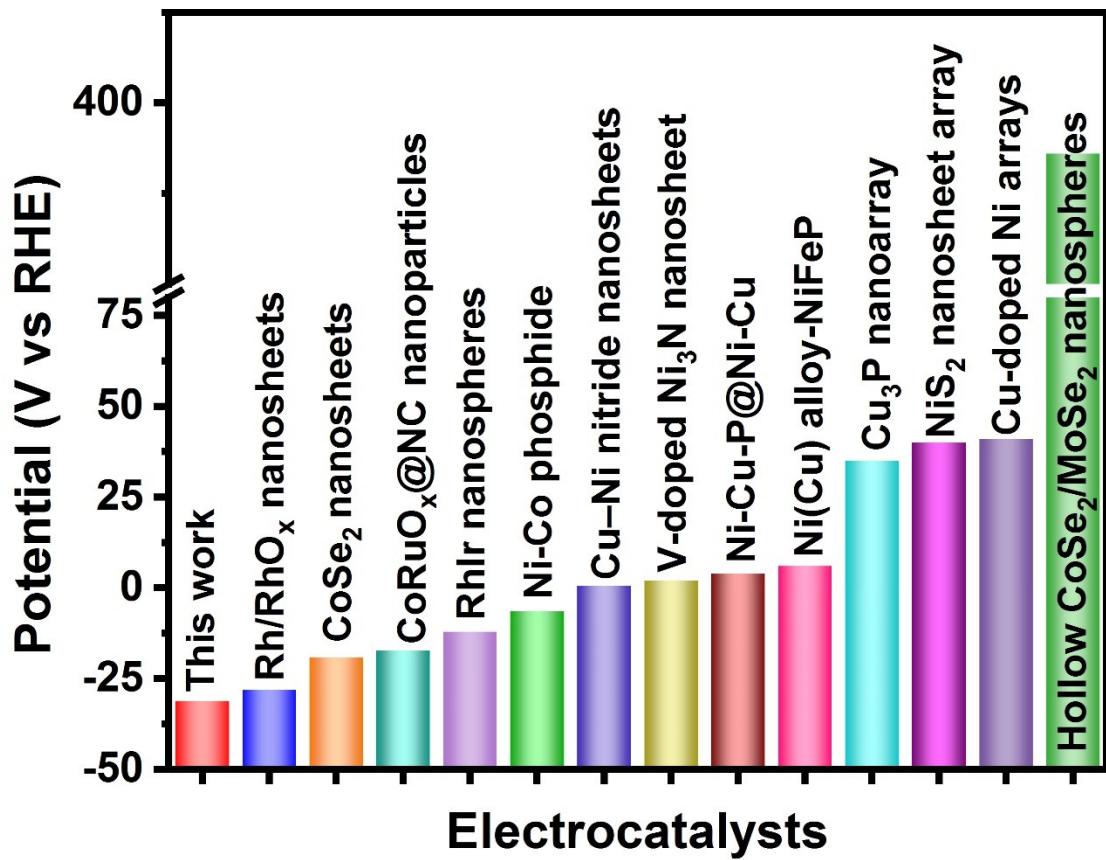

**Figure S3** Electrochemical measurements for OER: cyclic voltammogram (CV) curves

at different scan rates for OER: (a) NiOOH@CoCu CH, (b) NiOOH/NF and (c) CoCu CH/NF.

**Figure S4** Electrochemical measurements for HER: CV curves of NiOOH@CoCu CH (a), CoCu CH/NF (b) and NiOOH/NF (b) at different scan rates. (d) Plots curve of  $1/2\Delta j$  ( $\text{mA cm}^{-2}$ ) against scan rate, and the slopes enable the estimation of the electrochemical double layer capacitance ( $C_{\text{dl}}$ ) values.

**Figure S5** Comparison of HzOR performance of different electrocatalysts in terms of the potential to deliver a current density of 10 mA cm<sup>-2</sup> in 1 M KOH with 0.5 M hydrazine.

**Table S1** Electrocatalytic OER performance of NiOOH@CoCu CH compared with other transition metal oxides and hydroxides tested in 1 M KOH electrolyte.
