Table S2: Crystal data of **PHTA-HCHO**

Synthesis of PHTA

Diluted hydrochloric acid (6 mol/L) was added slowly to O-pheny-lenediamine (5.40 g, 50mmol) in round-bottom flask (500 mL). The resulting solution was stirred at room temperature until the o-pheny- lenediamine completely dissolved. 53.0g $\text{FeCl}_3 \cdot 6\text{H}_2\text{O}$ was dissolved in distilled water (75 mL) and trickled slowly into the round-bottom flask with a constant pressure funnel. With the addition of $\text{FeCl}_3 \cdot 6\text{H}_2\text{O}$, a red solid gradually formed. Produced mixture was stirred for 24 h, then removed and filtered, the red solid was washed with 6mol/L diluted hydrochloric acid for 3 to 5 times. Put red solid in hot distilled water at 100 °C and added 75ml NaOH (2 mol/L) into it, then a yellow solid was formed immediately. Continue to stir for 30–35 min and let it stand for 12h, after the suction filtration had tan solid was produced which was 2,3-diaminophenazine (DAP) (Yield: 41.5%. m.p > 300 °C). An orange precipitate was formed gradually after the addition of hydrochloric acid to the filtrate drop by drop. Then, adjusted the appropriate pH (pH =4~5) for precipitate and washed with distilled water. The obtained orange-red solid after drying was 2-amino-3-hydroxyphenazine (AHP)(Yield: 52.7%. m.p > 300 °C).

To dissolve 2, 3-diaminophenazine (0.4205 g, 2 mmol) in 20 mL of EtOH, and take 3 mL concentrated hydrochloric acid, diluted with EtOH to 10 mL. The diluted hydrochloric acid was added dropwise to the dissolved 2, 3-diaminophenazine solution and stirred the above solution fully at room temperature. By filtration and drying, the reserved solids are end-product DAPH. DAPH as dark brown solid and had a good solubility in distilled water. ^1H NMR (D_2O , 600 MHz) δ : 7.61 (s, 4H); 7.51 (s, 2H); 6.51 (s, 6H). ESI-MS calcd for $\text{C}_{12}\text{H}_{12}\text{N}_4^{2+}$ 212.1051, found 212.1010.

Scheme S1: Synthesis of PHTA

Crystal culture

PHTA (22 mg, 0.1 mmol) dissolved in DMSO, 0.5 formaldehyde solution was added. Sealed and stood for two days to precipitate dark yellow crystals in the container.
