## 1. Free energy profile of the entire reaction

Because the energy barrier of intramolecular hydrogen transfer is too high and the 5a product cannot be obtained in dichloroethane, we believe that the correct route for this reaction is the catalytic cyclization step, Claisen condensation reaction and retro-Claisen condensation reaction.

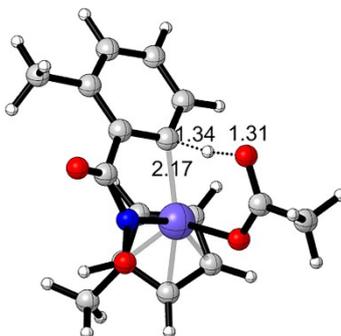

**Figure S1.** Calculated free energy profile for the entire reaction. The energy values are calculated using M06 method in 2,2,2-trifluoroethanol.
