1. General information

Unless otherwise noted, materials were purchased from commercial suppliers and used without further purification. Column chromatography was performed on silica gel (200~300 mesh). Enantiomeric excesses (ee) were determined by HPLC using corresponding commercial chiral columns as stated at 30 °C with UV detector at 254 nm. Optical rotations were reported as follows: $[\alpha]_D^T$ (c g/100 mL, solvent). All ^1H NMR and ^{19}F NMR spectra were recorded on a Bruker Avance II 400 MHz and Bruker Avance III 471 MHz respectively, ^{13}C NMR spectra were recorded on a Bruker Avance II 101 MHz or Bruker Avance III 126 MHz with chemical shifts reported as ppm (in CDCl_3 , TMS as an internal standard). Data for ^1H NMR are recorded as follows: chemical shift (δ , ppm), multiplicity (s = singlet, d = doublet, t = triplet, m = multiplet, br = broad singlet, dd = double doublet, coupling constants in Hz, integration). HRMS (ESI) was obtained with an HRMS/MS instrument (LTQ Orbitrap XL TM). The absolute configuration of **5aea** was assigned by the X-ray analysis.

Starting materials: All the aldehydes were commercially obtained and recrystallized or distilled prior to use. (1) 4-Amino pyrazolones were prepared following the reported procedures: X. Bao, S. Wei, X. Qian, J. Qu, B. Wang, L. Zou and G. Ge, Asymmetric construction of a multi-pharmacophore-containing dispirotriheterocyclic scaffold and identification of a human carboxylesterase 1 inhibitor, *Org. Lett.*, 2018, **20**, 3394-3398.

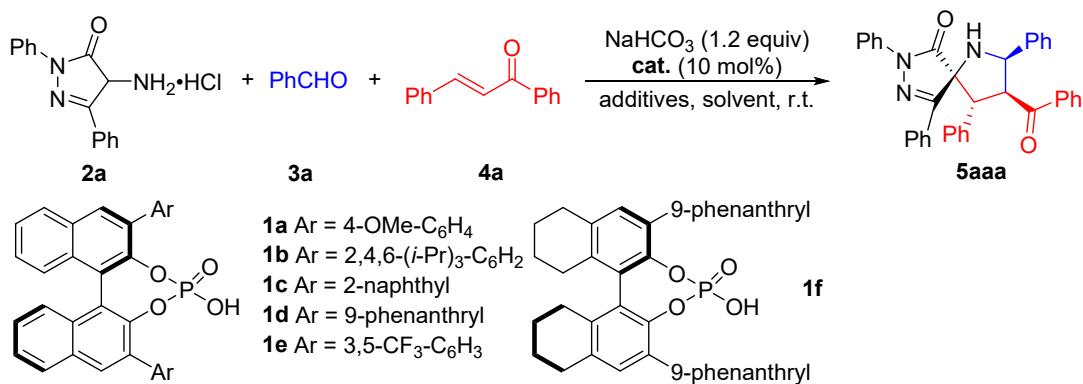

2. Experimental sections

General procedure for the synthesis of **5**

In a reaction tube, 4-amino pyrazolone **2** (0.24 mmol), α,β -enone **4** (0.20 mmol), catalyst (0.02 mmol) and 3 \AA MS (200 mg) were added into toluene (2 mL). Then aldehyde **3** (0.24 mmol) and NaHCO_3 (0.24 mmol) were added and the reaction solution was stirred at 25 °C. After the reaction was complete (monitored by TLC), the crude product was purified by column chromatography (ethyl acetate/petroleum ether = 1/20 to 1/4) on silica gel to give the product **5**.

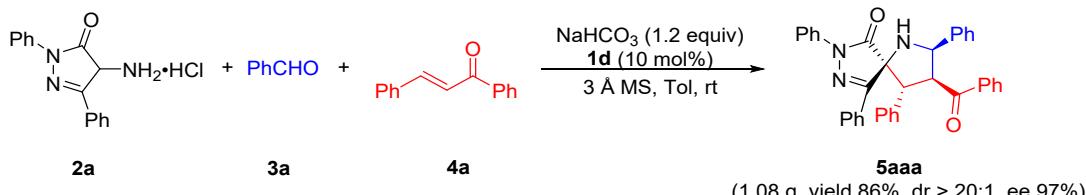

Table 1: Optimization of reaction conditions.^a CPA=chiral phosphoric acid.

14	1d	5 Å	Tol	64	>20:1	83
15	1d	MgSO ₄	Tol	60	>20:1	98

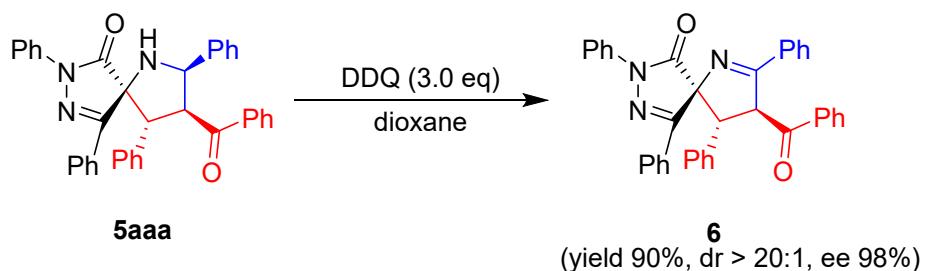

^aThe reaction was conducted with **2a** (0.12 mmol), **3a** (0.12 mmol), **4a** (0.10 mmol) and **cat.** (0.01 mmol), additives (100 mg) in solvent (1.0 mL) at room temperature. ^bIsolated yield. ^cThe dr was determined by ¹H NMR of crude product. ^dDetected by chiral HPLC analysis. ^eWithout NaHCO₃. ^fBy using Na₂CO₃.

Gram-scale reaction

In a reaction tube, 4-amino pyrazolone **2a** (2.76 mmol), **4a** (2.3 mmol), **1d** (0.23 mmol) and 3 Å MS (2300 mg) were added into toluene (23 mL). Then aldehyde **3a** (2.76 mmol) and NaHCO₃ (2.76 mmol) were added and the reaction solution was stirred at 25 °C. After the reaction was complete (monitored by TLC), the crude product was purified by column chromatography (ethyl acetate/petroleum ether = 1/20 to 1/4) on silica gel to give the product **5aaa** with 86% yield, >20:1 dr and 97% ee.

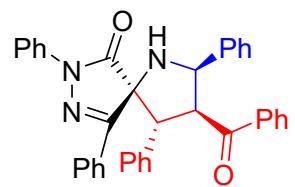

Procedure for the Synthesis of 6

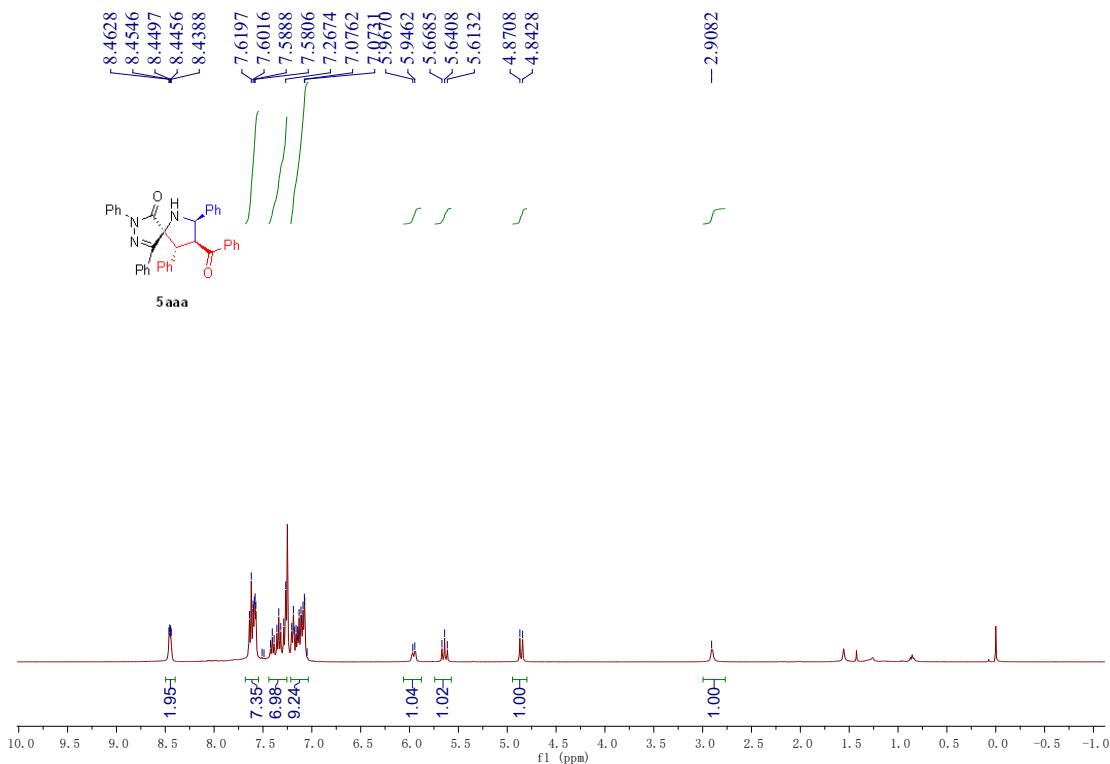

A reaction tube was charged with **5aaa** (0.2 mmol) and dioxane (2 mL), then DDQ (0.6 mmol) was added. The reaction was stirred at room temperature until it was complete (monitored by TLC), then the crude product was purified by column chromatography (ethyl acetate/petroleum ether = 1/10) on silica gel to give the product **6** as a white solid.
