1. General Information:

Pd(OAc)$_2$ was purchased from Strem Chemicals. All the solvents were purified by distillation prior to use. Substrates 1a-D5 and 1b-1h were synthesized according to reported procedures.$^{[1]}$ Unless otherwise noted, the other commercial chemicals were used without further purification.

$^1$H NMR and $^{13}$C NMR spectra were recorded on Bruker ARX400. High resolution mass spectra were measured on Bruker MicroTOF II ESI-TOF mass spectrometer. NMR spectra were recorded in CDCl$_3$. $^1$H NMR spectra were referenced to residual CHCl$_3$ at 7.26 ppm, and $^{13}$C NMR spectra were referenced to the central peak of CDCl$_3$ at 77.0 ppm. Chemical shifts (δ) are reported in ppm, and coupling constants (J) are in Hertz (Hz). Multiplicities are reported using the following abbreviations: s = singlet, d = doublet, t = triplet, q = quartet, m = multiplet.

5. Kinetic Isotope Effect Studies

The reaction of 2-iodobiphenyl 1a and its pentadeuterated derivative 1a-d5 with 2a was carried out by following the standard procedure. A mixture of three products (3aa, 3aa-d5 and 3aa-d5-iso) was obtained in an overall yield of 72%. The three products were formed by a mechanism as below. The palladacycle B-d5 gave 3aa-d5 and 3aa-d5-iso. ¹H NMR data analysis indicated that the ratio of 3aa to 3aa-d5 and 3aa-d5-iso was 3 to 1, so the KIE value is 3.0.
