

## Supporting Information

### Efficient Preparation of Nanocatalysts

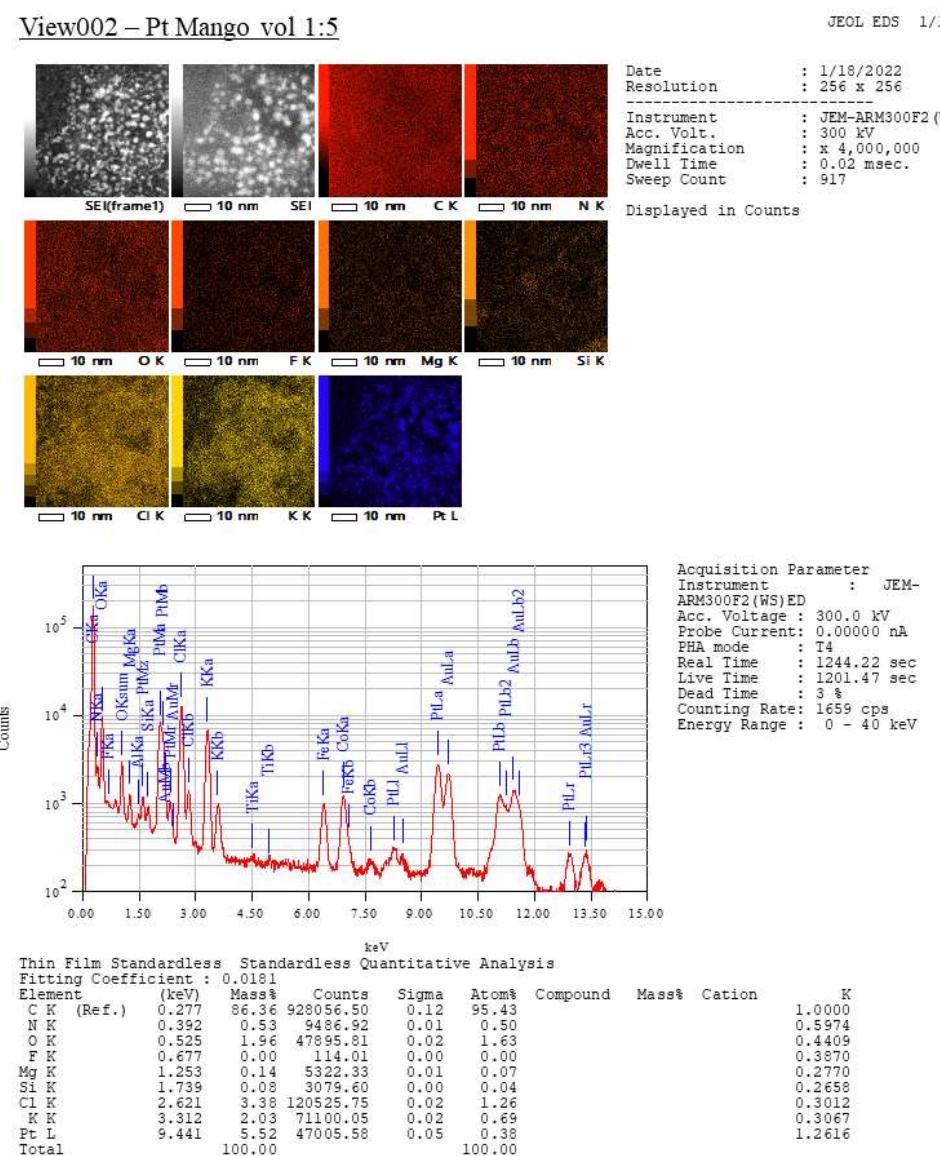

#### Case Study: Green Synthesis of Supported Pt Nanoparticles by Using Microemulsions and Mangosteen Peel Extract

Riny Yolandha Parapat,<sup>a,b</sup> Michael Schwarze,<sup>b</sup> Alwin Ibrahim,<sup>a</sup> Minoo Tasbihi,<sup>b</sup> Reinhard Schomäcker<sup>b</sup>

<sup>a</sup>Chem. Eng. Dept. of Institut Teknologi Nasional Bandung, PHH. Mustophra 23, 40124 Bandung, Indonesia.

<sup>b</sup>Department of Chemistry, Technische Universität Berlin, Straße des 17. Juni 124, 10623 Berlin, Germany.

#### 1. The complete TEM and EDX analysis of Pt NPs after synthesized by microemulsions

Note: specimen is changing over time.

Particles merge and a C-contamination layer spreads over the ROI (compare SEI(frame1) with SEI).

SEI (frame1) = before the EDX-acquisition --- SEI = last image of the EDX-acquisition

Fig. S1 Complete TEM - EDX investigation of Pt NPs in the microemulsion before deposited on Al<sub>2</sub>O<sub>3</sub>

## 2. Anova Tables for the Yield and Activity of Pt/Al<sub>2</sub>O<sub>3</sub>

The significant factors that affect the Yield are A, B and the CD interactions, where A, B, C and D are amount of Pt in precursor, amount of reductant, synthesis time, and mass fraction of surfactant, respectively.

**Table 1. Analysis of Variance for Yield with  $\alpha = 0.05$**

Source	DF	Adj SS	Adj MS	F-Value	P-Value

## 2. FTIR analysis of $\text{Al}_2\text{O}_3$ , Pt/ $\text{Al}_2\text{O}_3$ and the Mangosteen Peel

The absence of any residual organic species on the Pt catalyst was confirmed by the FTIR analysis

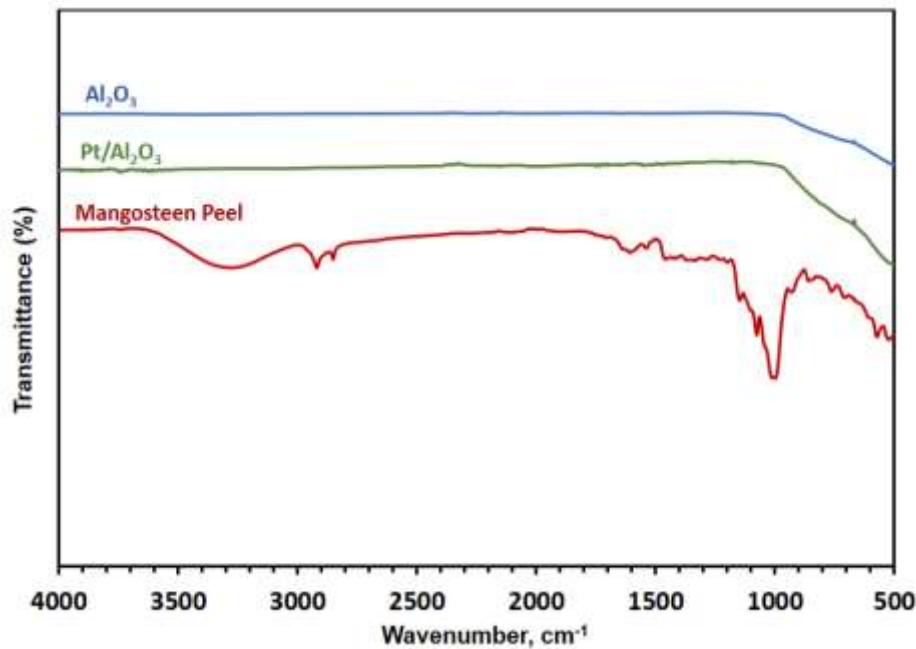

Fig. S2 FTIR analysis of  $\text{Al}_2\text{O}_3$ , Pt/ $\text{Al}_2\text{O}_3$  and the Mangosteen Peel
