Contents:

Figure S1. ToF-SIMS spectra comparison between Bi₃⁺ and Ar₃₀₀₀⁺ at the low mass range in ALS fly models.

Figure S2. Screening for the lipid regulators that modify *Drosophila* eye phenotypes induced by ALS-associated (G₄C₂)₃₆. (A) List of lipid regulators screened in this study. (B) Retinal images of *Drosophila* expressing the denoted RNAi (Ri) transgenes alone without (G₄C₂)₃₆. Fly eyes were imaged on day 1 after eclosion. (C) Quantification of the relative severity (based on the criteria shown in Fig. 5B) of retinal degeneration in *Drosophila* expressing the denoted transgenes described in Supplementary Figure S3-B. n = 5 eyes.

Figure S3. Quantification of mRNA levels of (A) SREBP and (B) dob genes in *Drosophila* expressing ALS-associated (G₄C₂)₃₆ on day 5 after the induction of (G₄C₂)₃₆ expression by RU486 treatment. The mRNA level of the elav gene was used as a control for normalization of the values in different sets of the experiment. The mRNA levels of lipid regulator genes in the control (Ctrl) were set to be 1.0, and their relative mRNA levels in heads expressing (G₄C₂)₃₆ are presented for comparison. *p < 0.05, N.S., not significant, p > 0.05 by two-tailed t-test; error bars ± SEM; n ≥ 3 replicates.

Figure S4. Loading plots of the positive and negative ions in the ToF-SIMS spectra of the indicated gene models.

Table S1. Summary of mass deviation of positive ions and negative ions after external calibration.

Table S2. Summary of the highest loading values in PC1 loading plot of the positive and negative ions in the ToF-SIMS spectra (up-regulation) between control day 5 and ALS day 5 groups.

Table S3. Discriminant ion list is selected by the highest contribution loading PC1 of the positive and negative ions in the ToF-SIMS spectra (up-regulation) between each modified *Drosophila* model, control and ALS groups.

[SUPPLEMENTARY FIGURES]

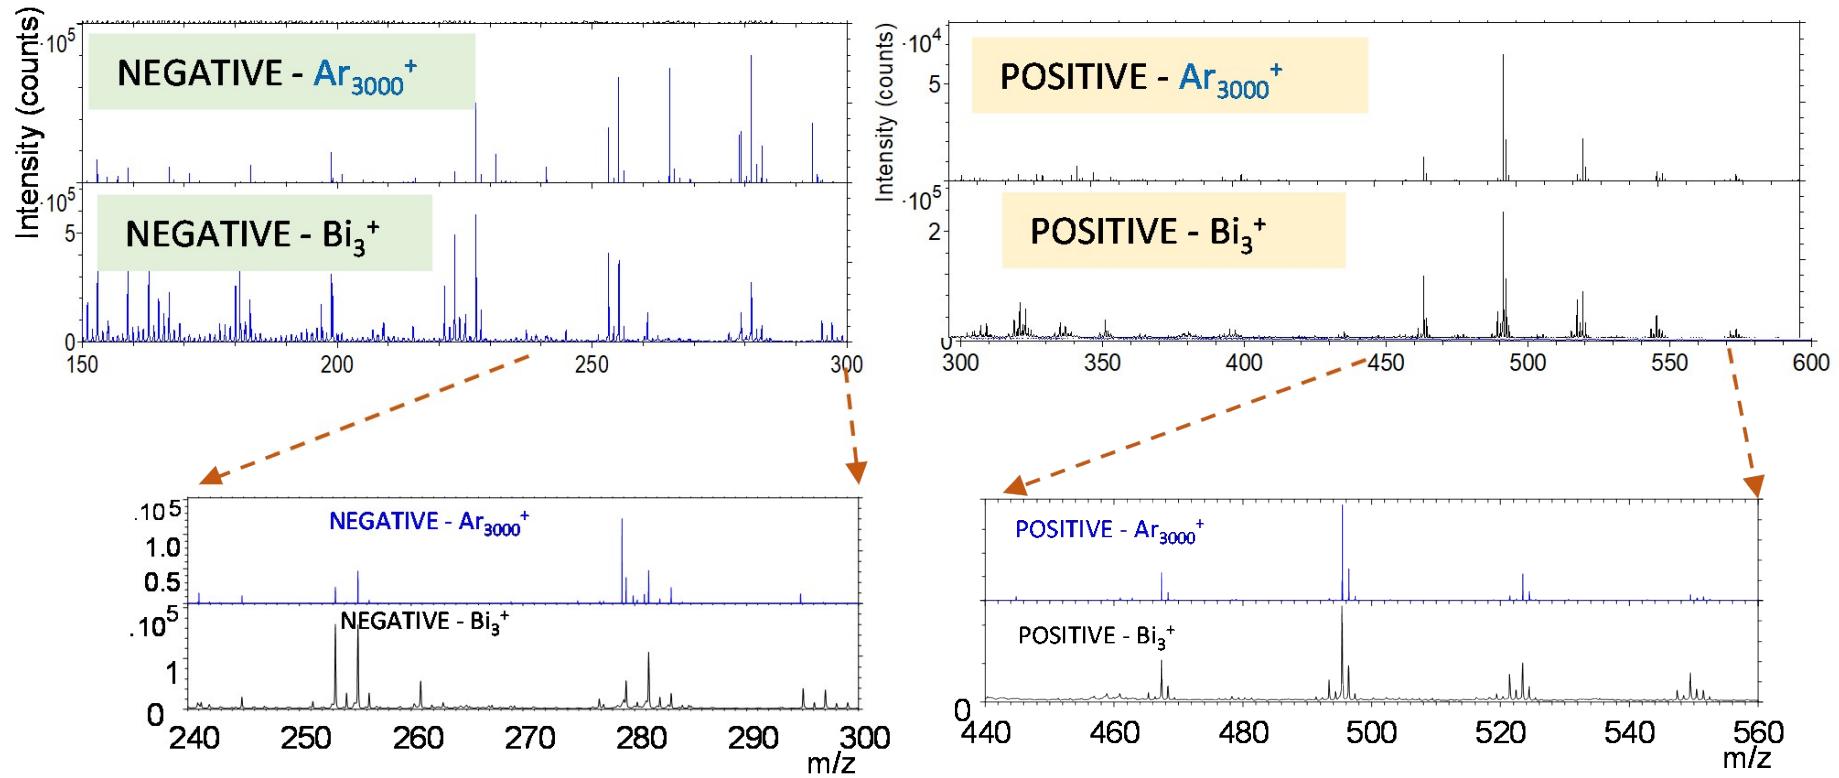

Figure S1. ToF-SIMS spectra comparison between Bi_3^+ and Ar_{3000}^+ at the low mass range in ALS fly models.

A

	Regulators	Human homologue	Fly homologue	Stock number
Biosynthesis	Acetyl-CoA carboxylase (ACC)	ACACA	CG11198	34885
	Sterol regulatory element binding protein (SREBP)	SREBF2	CG8522	25975
	ChREBP (Mondo)	MLXIP	CG18362	27059
Biosynthesis of phosphatidic acid and DAG	Glycerol-3-phosphate 1-O-acyltransferase (GPAT)	GPAT3	CG15450	61335
	CDP-diacylglycerol synthase (CDS)	CDS1	CG7962	58118
Uptake, activation, trafficking	Fatty acid transport protein 1 (FATP1)	SLC27A1	CG46149	50709
	Fatty acid binding protein (FABP)	FABP3	CG6783	34685
	Acyl-CoA-binding protein (ACBP)	ACBD5	CG8814	67020
Lipolysis	PNPLA3 (dob)	PNPLA2	CG5560	65925
	ATGL (Bmm)	PNPLA2	CG5295	25926
β-oxidation	Carnitine palmitoyltransferase 2 (CPT2)	CPT2	CG2107	62455

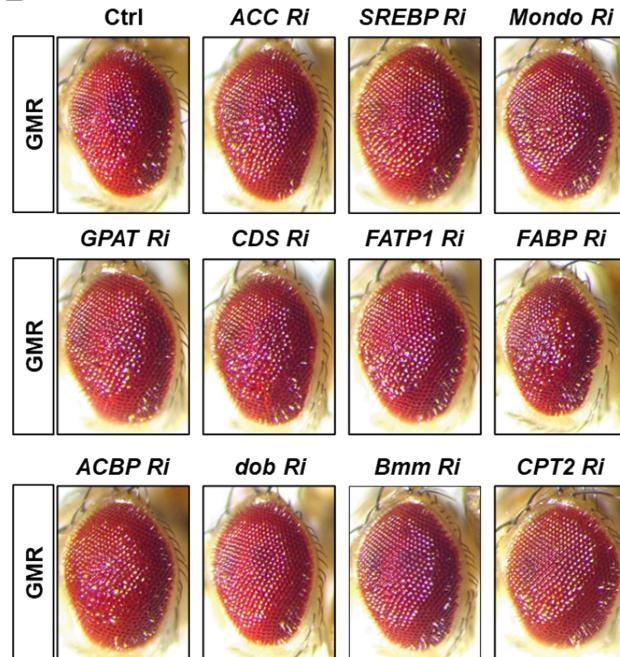

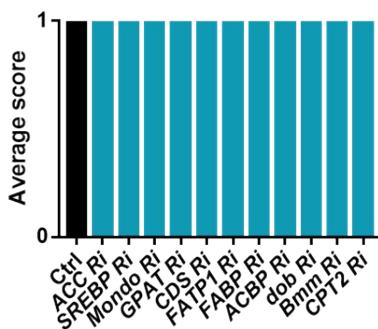

B**C**

Figure S2. Screening for the lipid regulators that modify *Drosophila* eye phenotypes induced by ALS-associated (G_4C_2)₃₆. (A) A list of lipid regulators screened in this study. (B) Retinal images of *Drosophila* expressing the denoted RNAi (Ri) transgenes alone without (G_4C_2)₃₆. Fly eyes were imaged at day 1 after eclosion. (C) Quantification of the relative severity (based on the criteria shown in Figure 5B) of retinal degeneration in *Drosophila* expressing the denoted transgenes described in Supplementary Figure S3-B. n = 5 eyes. [Genotype: Ctrl, +/+; UAS-luciferase/GMR-gal4, ACC Ri, +/+; UAS-ACC RNAi/GMR-gal4, SREBP Ri, +/+; UAS-SREBP RNAi/GMR-gal4, mondo Ri, +/UAS-mondo RNAi; GMR-gal4/+; GPAT Ri, +/UAS-GPAT RNAi; GMR-gal4/+; CDS Ri, +/UAS-CDS RNAi; GMR-gal4/+; FATP1 Ri, +/+; UAS-FATP1 RNAi/GMR-gal4; FABP Ri, +/+; UAS-FABP RNAi/GMR-gal4; dob Ri, +/UAS-dob RNAi; GMR-gal4/+; bmm Ri, +/+; UAS-bmm RNAi/GMR-gal4; CPT2 Ri, +/UAS-CDS RNAi; GMR-gal4/+].

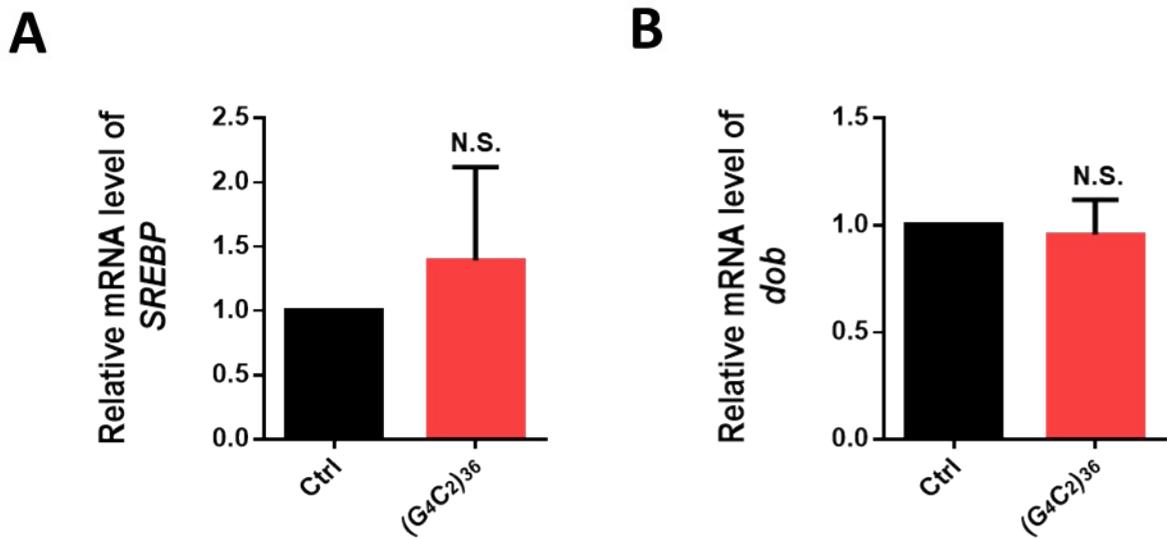

Figure S3. Quantification of mRNA levels of *SREBP* and *dob* genes in *Drosophila* expressing ALS-associated $(G_4C_2)_{36}$ at day 5 days after induction of $(G_4C_2)_{36}$ expression by RU486 treatment. The mRNA level of the *elav* gene was used as a control for normalization of the values in different sets of the experiment. The mRNA levels of lipid regulator genes in the control (Ctrl) were set to be 1.0, and their relative mRNA levels in heads expressing $(G_4C_2)_{36}$ are presented for comparison. * $p < 0.05$, N.S., not significant, $p > 0.05$ by two-tailed t-test; error bars \pm SEM; $n \geq 3$ replicates. [Genotype: Ctrl, +/*elavGS-gal4*, ALS, $(G_4C_2)_{36}/+$; *elavGS-gal4/-*].

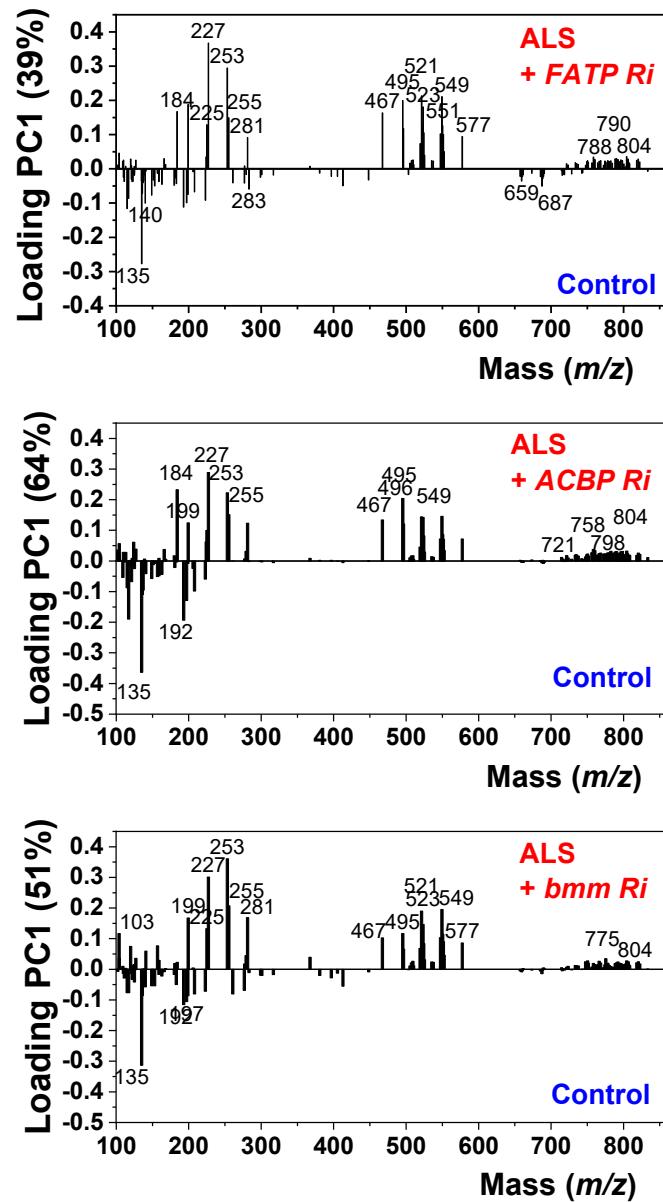

Figure S4. Loading plots of the positive and negative ions in the ToF-SIMS spectra of the indicated gene models.

[SUPPLEMENTARY TABLES]

Table S1. Summary of mass deviation of positive ions and negative ions after external calibration.

Positive Ion	Hybrid SIMS (<i>m/z</i>)	Internal Calibration (ppm)	External Calibration (ppm)
TAG(28:0)	495.440	32.30	3.03
