S-1 Overview of the described applications

Table S1 summarizes the applications described in the manuscript based on the sample type (e.g. nanoparticles, polymers, or small molecules). For each sample type, the property of interest is highlighted along with the sample transformation that is applied, the approach used, the type of coupling, and the analytical technique. All abbreviations used in the table are described on the below the table.

Table S1: Overview of the properties of interest of the different sample types and its corresponding sample transformation and analytical method.
