Figure S1. The molecular orbitals and their relative energy alignment at the optimized  $S_0$  geometry of DMIT, DMIT-7OH and DMIT-7OMe.

Figure S2. The molecular orbitals and their relative energy alignment at the optimized  $S_0$  geometry of CPO, CPO-OH and CPO-OMe.

Figure S3. The molecular orbitals and their relative energy alignment at the optimized  $S_0$  geometry of DMIT-7OH and its derivatives with nitrogen substituted at *meta-*, *ortho-* or *para-* position.

Figure S4. The molecular orbitals and their relative energy alignment at the optimized  $S_0$  geometry of the DMIT series.

Figure S5. The detailed energy diagram of DMIT-7OMe at the optimized  $S_0$ ,  $S_2$  and  $T_1$  geometries.

Figure S6. The molecular orbitals and their relative energy alignment at the optimized  $S_0$  geometry of the CPO series.

Figure S7. The molecular orbitals and their relative energy alignment at the optimized  $S_0$  geometry of the CPS series.

**Figure S8**. Top view and side view of different frontier molecular orbitals in CPON-OMe mapped together with total density isovalue = 0.02.

Figure S9. The molecular orbitals and their relative energy alignment at the optimized  $S_0$  geometry of the CPON and *i*-CPON series.

**Figure S10**. The detailed energy diagram at the optimized  $S_0$ ,  $S_2$  and  $T_1$  geometries of *i*-CPON.

Figure S11. The energy diagram at the optimized  $S_0$  geometries of DMIT-7OH with b3lyp and  $\omega$ B97XD

Compound	Excited	Energy	Contribution	Character	$\Delta E(S_2-S_1)$
