Figure S1. Rotatable 3D figure of the global minimum of the dimer benzofuran···sulfur dioxide according to the B2PLYP-D3(BJ)/def2-TZVP calculations of Table 1.

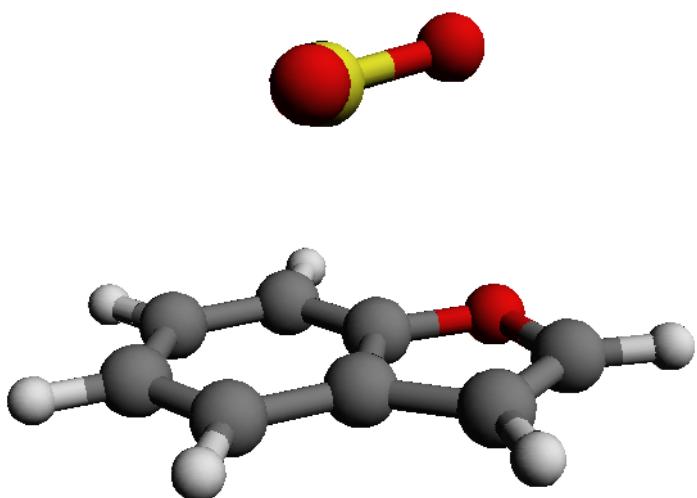

Figure S2. Rotatable 3D figure of the global minimum of the dimer benzofuran···hydrogen sulfide according to the B2PLYP-D3(BJ)/def2-TZVP calculations of Table 2.

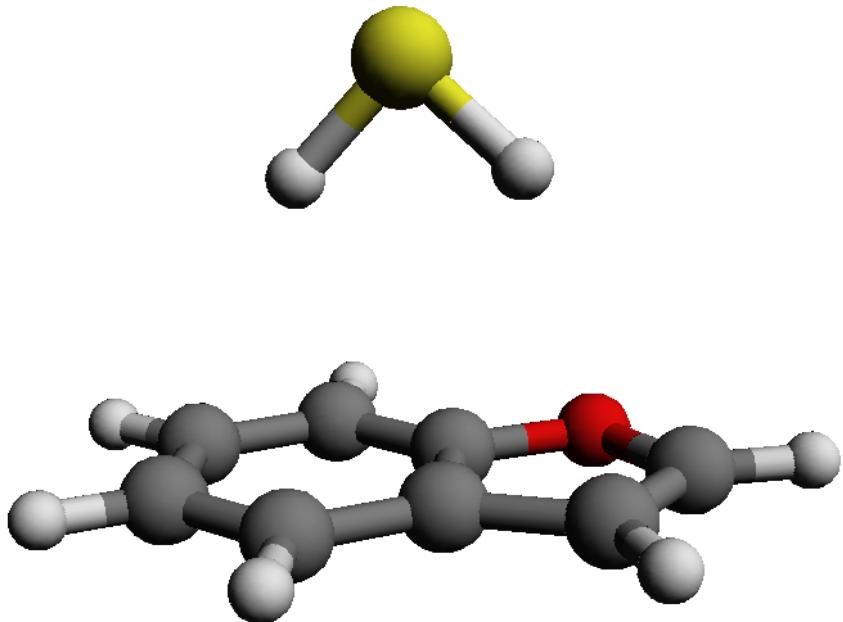

Figure S3. Microwave spectrum of the dimer benzofuran···sulfur dioxide (1 M averages were collected for the time-domain spectrum, followed by a Fourier transformation with a Kaiser-Bessel window).

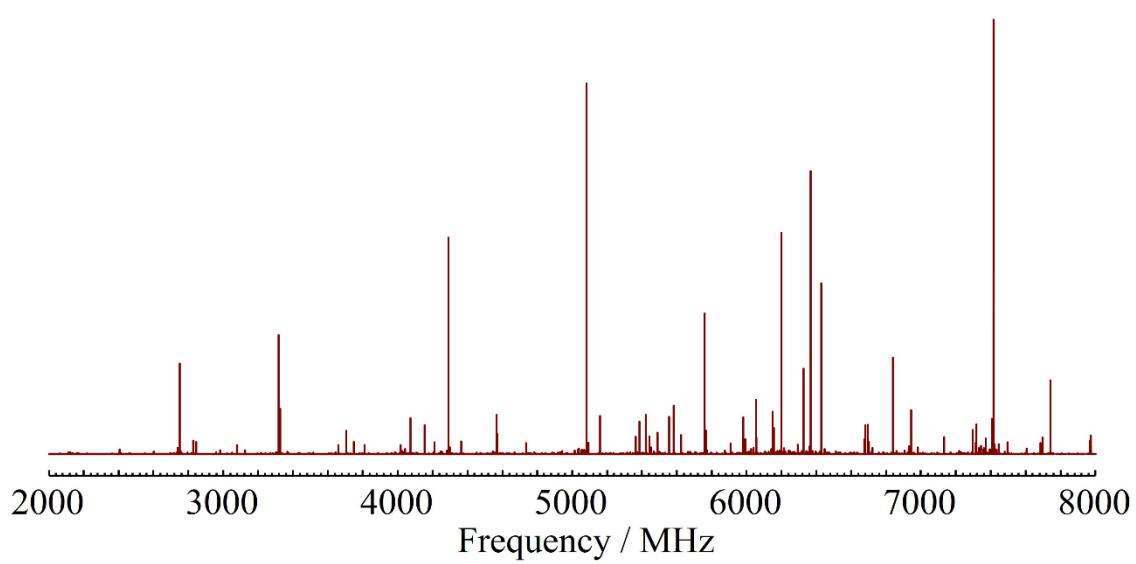

Figure S4. Microwave spectrum of the dimer benzofuran···hydrogen sulfide (1 M averages were collected for the time-domain spectrum, followed by a Fourier transformation with a Kaiser-Bessel window).

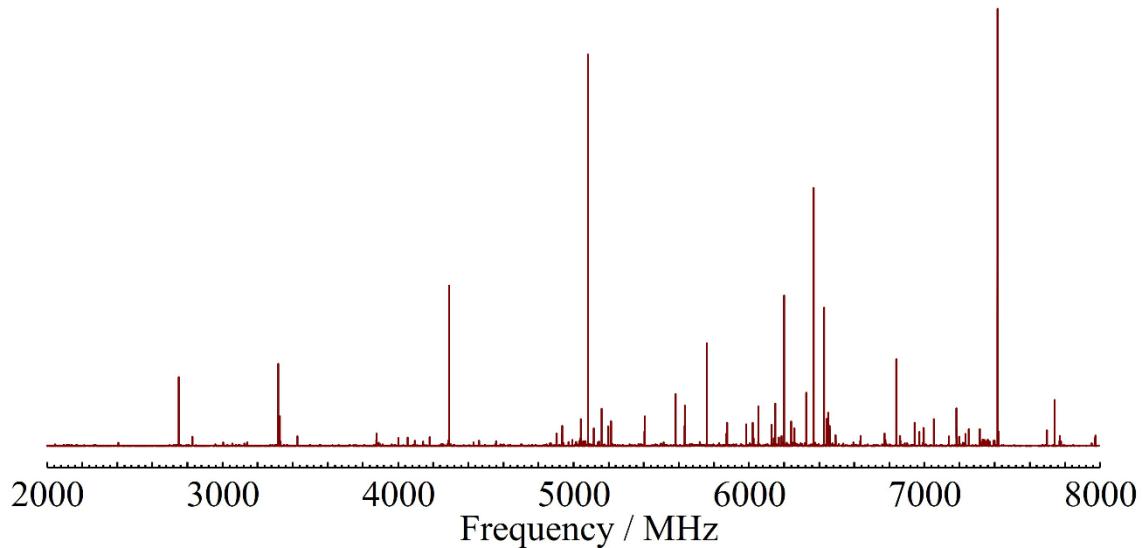

Figure S5. A comparison between the two most stable structures of the dimer benzofuran···sulfur dioxide (upper panel: isomer I, lower panel: isomer II), showing the electric dipole moment components in the principal inertial axes (blue, yellow, red and grey vectors represent respectively μ_a , μ_b , μ_c and μ_{total}). The absence of μ_c transitions in the spectrum confirmed the assignment of isomer I.

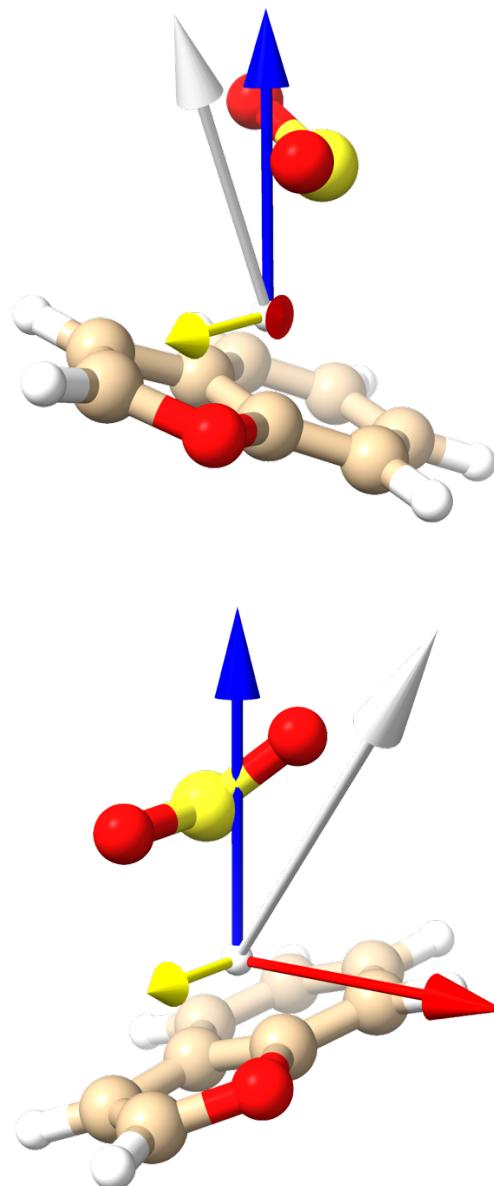

Table S1. Theoretical spectroscopic parameters of the first four stable isomers of the benzofuran···sulfur dioxide dimer using the B3LYP-D3(BJ) method and the def2-TZVP, jun-cc-pVTZ and cc-pVTZ basis sets.
