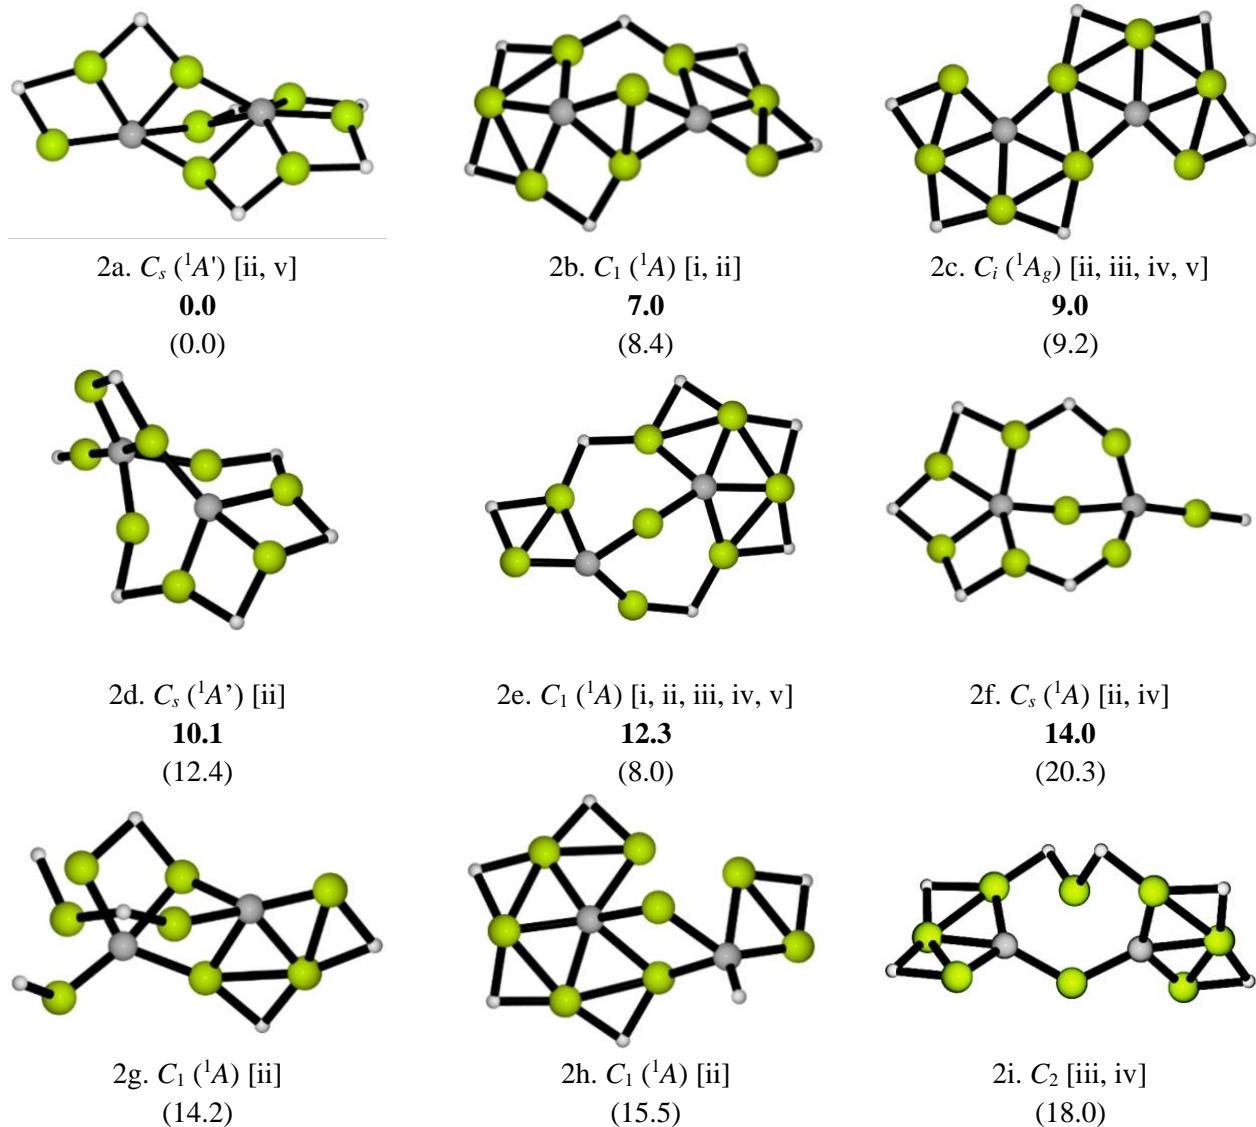

Figure S1. The employed methodology involved permutation; we have used as molecular templates the acenes $C_{4n+2}H_{2n+4}$ ($n=2-4$). Carbon atoms were introduced to the center of each ring, whereas the perimeter of carbon was replaced by beryllium. Additionally, Be-H fragments were eliminated from each ring until the targeted stoichiometry was achieved.

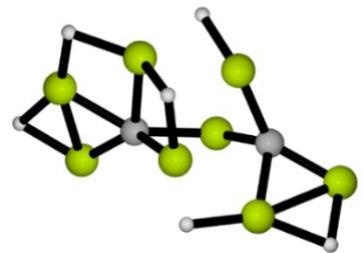

Figures S2. Minimum energy isomers of CBe₅H₄⁺ and their respective point group symmetries and spectroscopic states. Relative energies are shown in kcal·mol⁻¹ at PBE0-D3/def2-TZVP levels, including zero-point energy (ZPE) corrections. Within the brackets the methodology by which it was identified; (i) standard AUTOMATON; (ii) guided AUTOMATON, (iii) Fragment Kick, (iv) Permutation, and (v) exposed in BOMD; a special tag (ref) identifies the isomer discussed in the main text. To facilitate the connection of the structures with their Cartesian coordinates (at end of the ESI), a number-letter label was assigned to each structure.

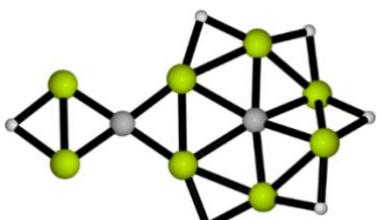

Figures S3. Minimum energy isomers of $\text{C}_2\text{Be}_8\text{H}_6^{2+}$ and their respective point group symmetries and spectroscopic states. Relative energies are shown in $\text{kcal}\cdot\text{mol}^{-1}$ at led as DLPNO-CCSD(T)/CBS (in **black**) and PBE0-D3/def2-TZVP (in parentheses) levels including zero-point energy (ZPE) corrections. Within the brackets the methodology by which it was identified; (i) standard AUTOMATON; (ii) guided AUTOMATON, (iii) Fragment Kick, (iv) Permutation, and (v) exposed in BOMD. To facilitate the connection of the structures with their Cartesian coordinates (at end of the ESI), a number-letter label was assigned to each structure.
