S1 Slater-Koster Table Creation - Details

Figure S1 displays a comparison between the original C-C Slater-Koster table and the recreation carried out in this work. Note that the single deviating line is not actually deviating and only a result of the program-immanent conventions as only the absolute values of Hamiltonian and overlap stored in the Slater-Koster table are relevant. Inverting the sign would lead to a corresponding identical line. The Hubbard derivative of sodium deviates by 0.0001 from the respective 3ob value, which is probably a result of employing a different parametrisation software and the influence on the calculation likely is negligible. In general, the generated one-center parameters are comparable with data from previous work of Wahiduzzaman et al.^[1] The observed good agreement confirms that the workflow to achieve a DFTB parametrization was properly implemented.

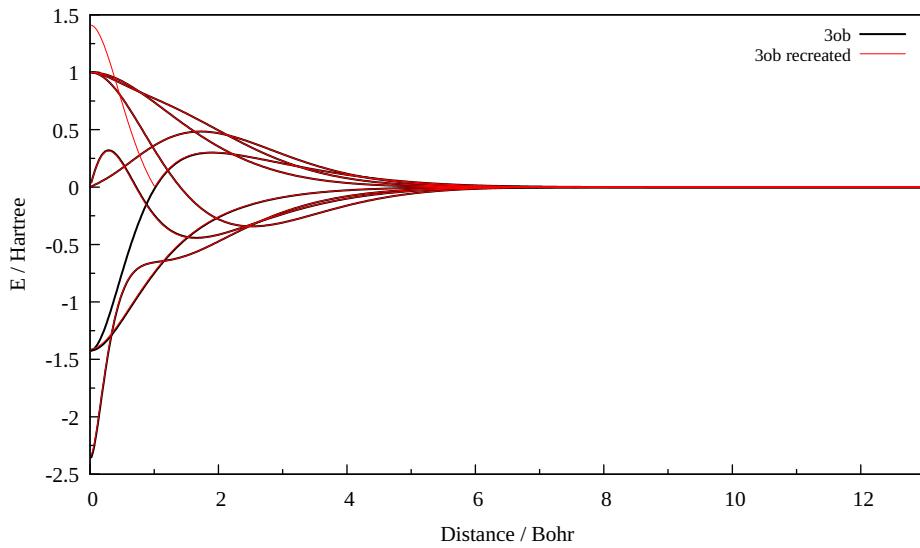

Figure S1: Comparison of the C-C Slater-Koster tables of original 3ob parametrization (black) and recreated one with Hotcent (red)

Table S1: Hubbard derivatives of Alkali metals from the original 3ob set^[2] and recalculated with Hotcent

S3 Depiction of the scan configurations for the DFTB force field parametrisation

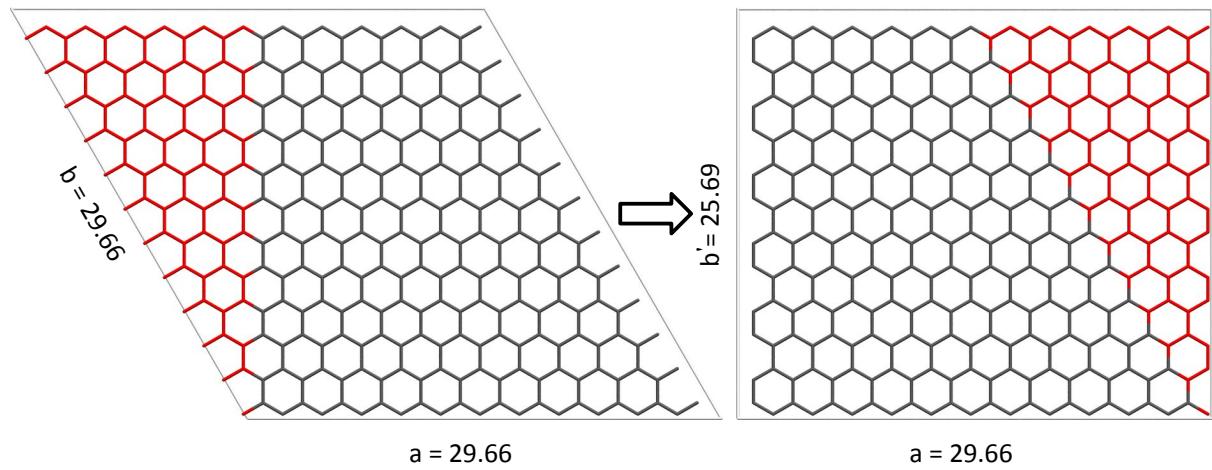

Figure S2: Orthorombisation of the 12×12 graphene super cell, the carbon atoms coloured in red were shifted by a in x direction accordingly. The orthorombisation is valid if the number of unit cells along the b -direction is even (twelve in this case).

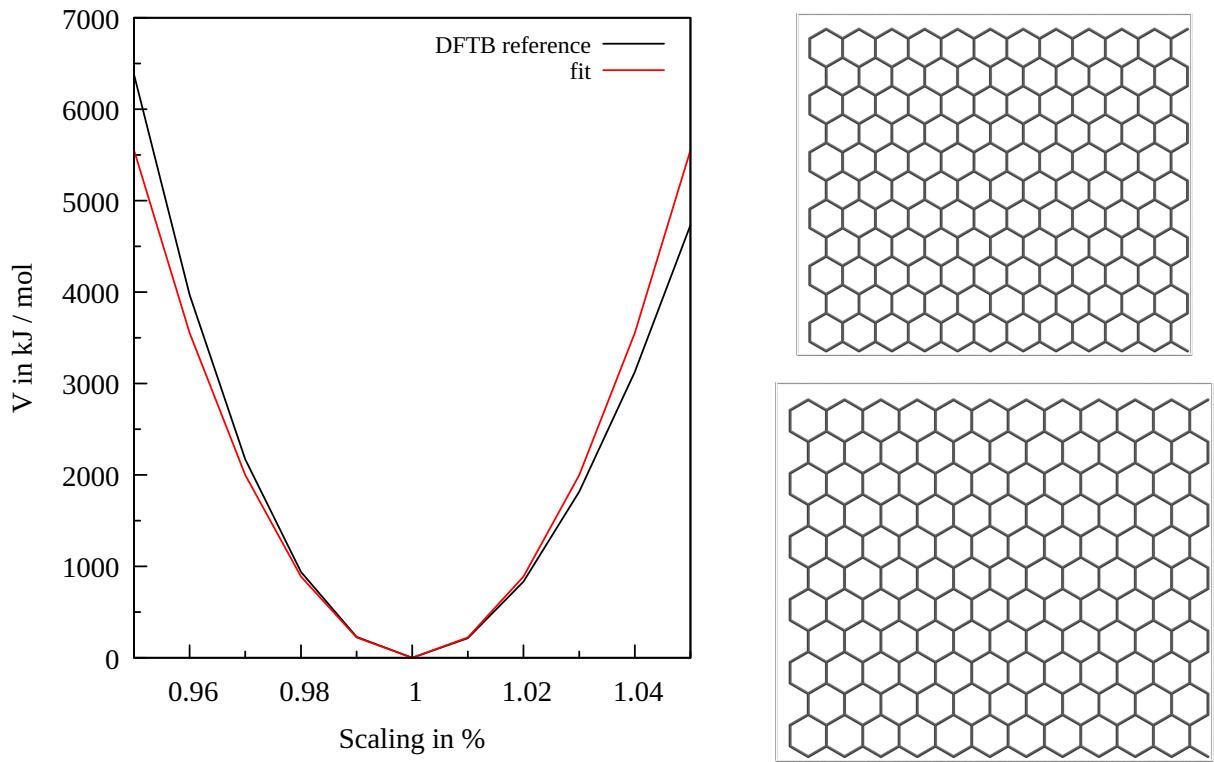

Figure S3: Visualisation of the bond potential of the force field and DFTB reference (left) and the associated scaled unit cell to 95% (upper right) and 105% (lower right)

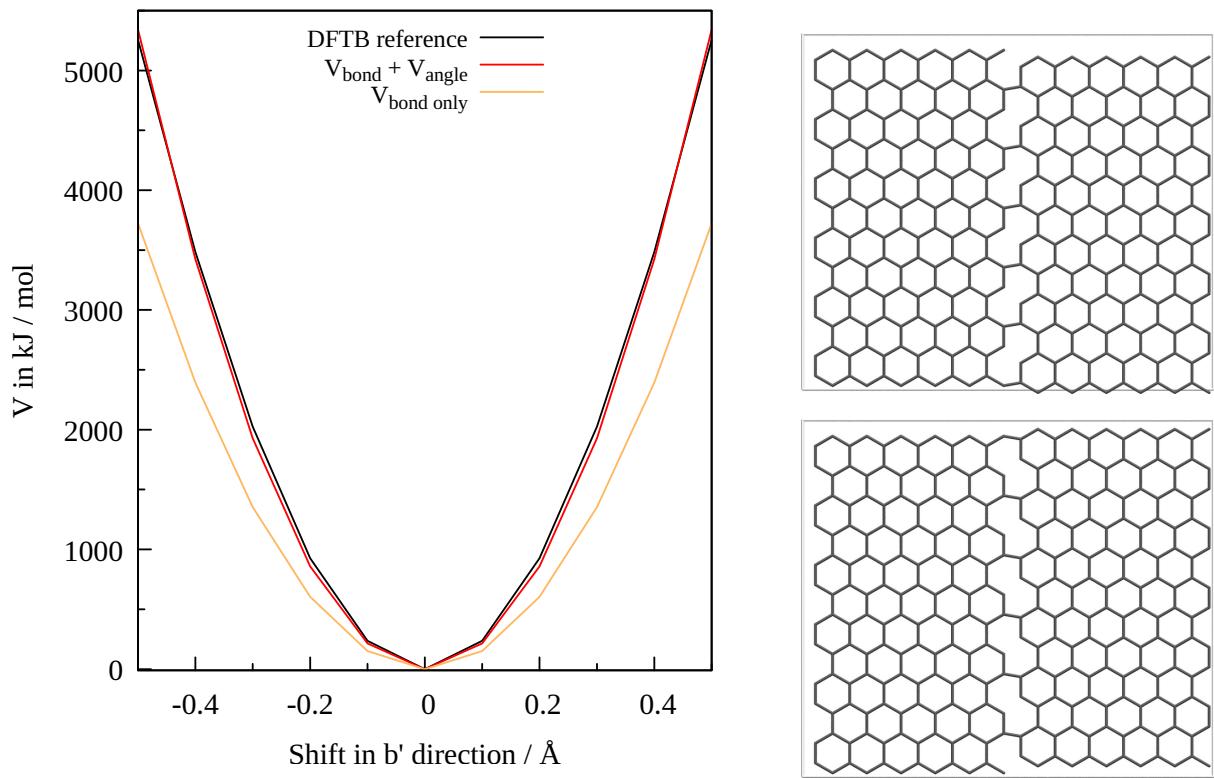

Figure S4: Visualisation of the angle potential of the force field and DFTB reference (left) and the associated shift of 0.5 and - 0.5 Å in b' direction (right)

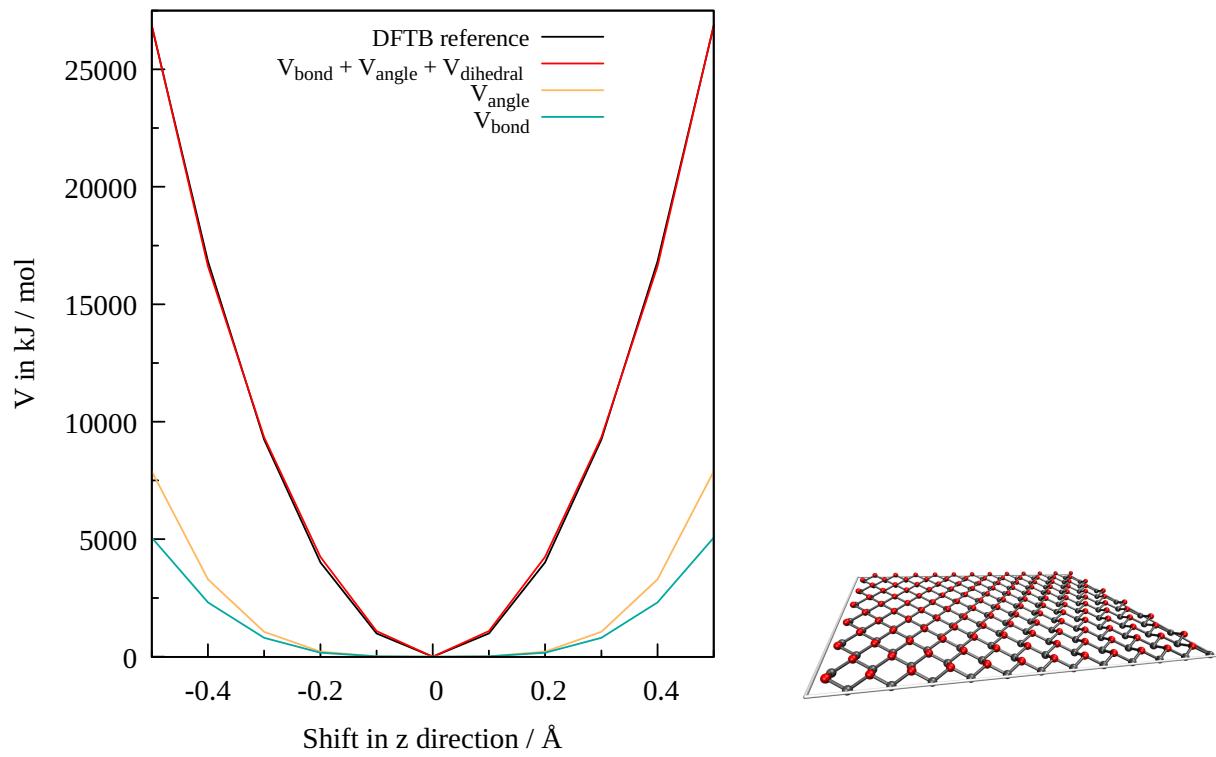

Figure S5: Visualisation of the dihedral potential of the force field and DFTB reference (left) and the associated shift of 0.5 and - 0.5 Å in z direction (right)

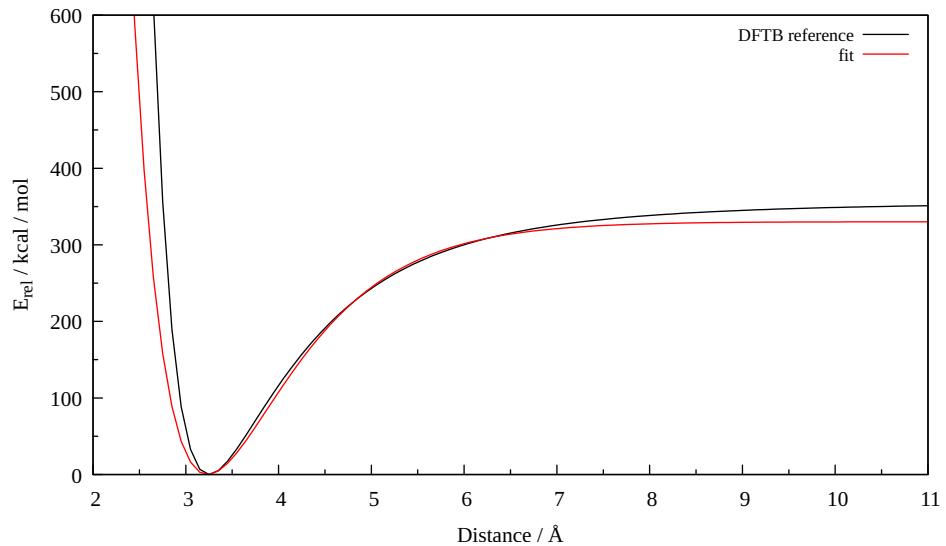

Figure S6: Energy plot of DFTB graphene interlayer scan and parametrised Morse potential

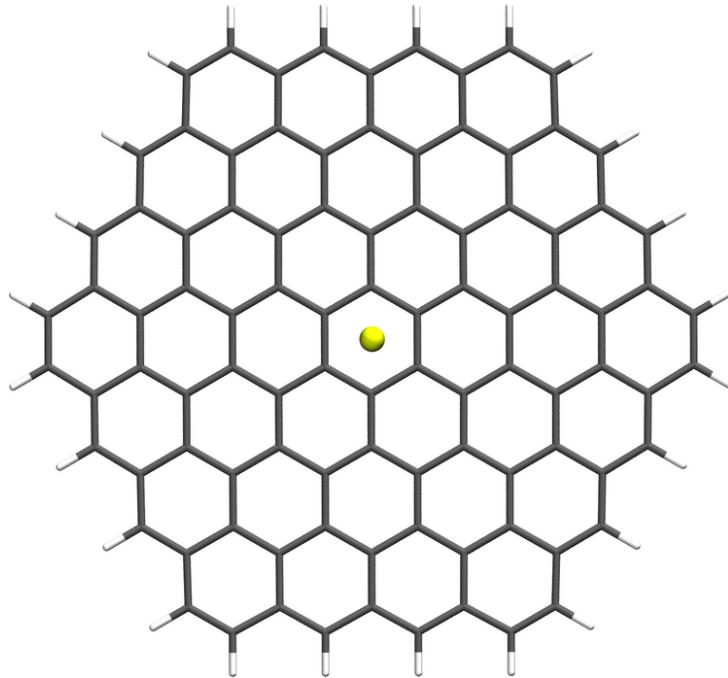

Figure S7: Visualisation of the graphene flake and adsorbed metal (Li/Na) atom employed in the scan with the composition C₉₆H₂₄

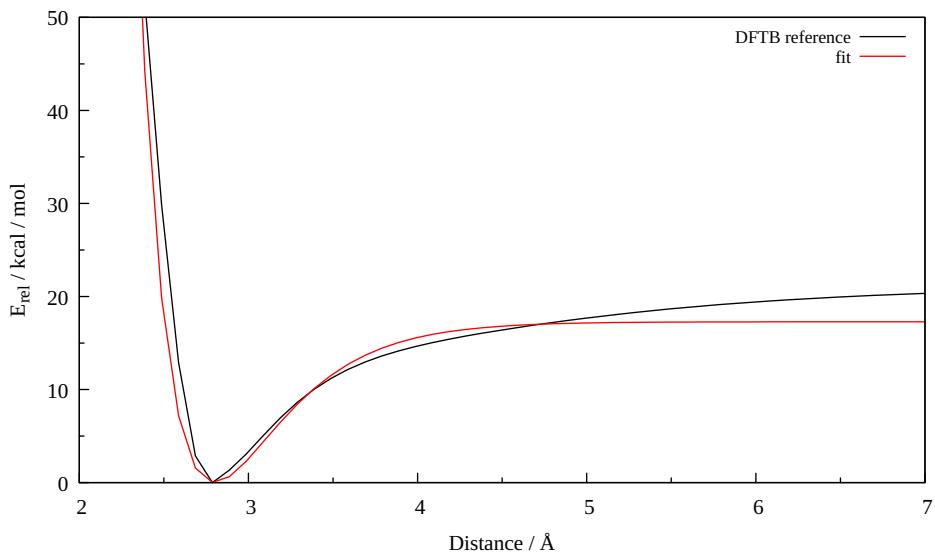

Figure S8: Energy plot of DFTB coronene and Li⁰ scan and parametrised Morse potential

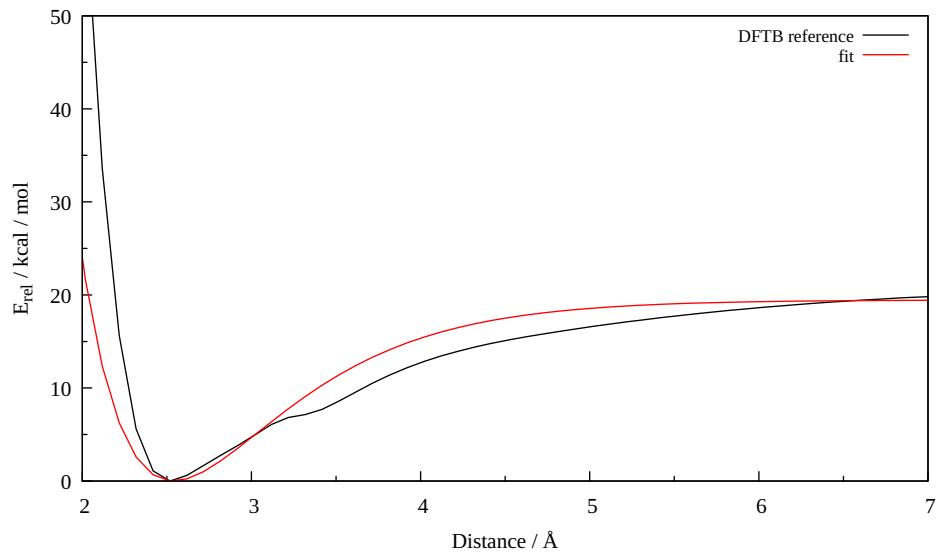

Figure S9: Energy plot of DFTB coronene and Na^0 scan and parametrised Morse potential

Table S3: Average charges of the alkali metal atoms in elementary charge e in dependence of the temperature over the simulation time
