

## Supporting Information for Machine Learning-Augmented Docking

### 1. CYP inhibition prediction

Benjamin Weiser, Jerome Genzling, Mihai Burai Patrascu, Ophélie Rostaing and Nicolas Moitessier\*

## Code Workflow Procedure

1. Cleaned and combined test and train Pei sets with CYP\_clean\_files.ipnyb. Sets combined and then clustered to create new train and test sets
2. Dock each ligand 5 times to its respective isoform using FITTED. Docked data can be found here: (to be inserted)
3. Create analogue sets using FITTED. Create max train-test similarity using CYP\_TC\_DataSets.py
4. Run RF with Feature Importances using max train-test similarity of 0.8 using ML\_over\_Tanimoto.py which calls CYP\_inhibition\_functions.py and Do\_ML2.py
5. Using these selected features run all ML models on all datasets using ML\_over\_Tanimoto.py which calls CYP\_inhibition\_functions.py and Do\_ML2.py
6. Use CYP\_evaluate\_and\_ensemble.py which calls CYP\_evaluate\_and\_ensemble\_functions.py to make ensembles and evaluate and graph model performance

## 1 List of input Ligand Features

- Energy
- van der Waals
- Electrostatics
- Hydrogen Bonds
- Hydrogen Bond-like Metal interaction
- Metal Coordination
- Water van der Waals
- Water Electrostatics
- Water Hydrogen Bonds
- Number of Water Molecules
- Number of Rotatable Bonds
- Rotatable Bonds Entropy
- Non-polar Solvation Energy
- Polar Ligand Solvation Energy
- Polar Protein Solvation Energy
- RMSD
- RMSD (MBG)
- Strain Energy
- RankScore
- MatchScore
- Molecular Weight
- Net Charge
- Hydrogen Bond Donors
- Hydrogen Bond Acceptors
- Rotatable Bonds
- Rings
- Ionizable Centers
- Oxgens
- Nitrogens
- Sulfurs
- Heteroatoms
- Heavy Atoms
- Michael Acceptors
- tPSA
- logP
- Fsp3
- Stereogenic Centers Ratio
- logS
- Stereogenic Centers
- Aromatic Rings
- Aromatic Proportion
- Halogens
- McGowan Molecular Volume
- Molecular van der Waals Surface Area
- Polar SASA
- non Polar SASA
- Molecular Density
- Molecular Polarity
- Blood-Brain Barrier
- Molecular Softness
- Molecular Electronegativity
- Negatively Charged Oxygens
- Positively Charged Nitrogen
- Molecular Hardness
- Molecular Polarizability
- 3D-Wiener Index
- Geometric Radius
- Geometric Diameter
- Geometrical Shape Coefficient
- Span
- Radius of Gyration
- Ovality Index
- Globularity Factor

- Dipole moment
- Badapple pscore
- Quantitative Estimate of Druglikeness
- aromatic
- carboxylic acid
- carboxylate
- ester aromatic
- ester aliphatic
- ester conjugated
- ester
- lactone
- aldehyde aromatic
- aldehyde aliphatic
- aldehyde conjugated
- aldehyde
- acyl chloride
- acyl bromide
- amide ter
- amide
- lactame
- anhydride
- ketone
- sulfonamide
- thiol
- thiolate
- carbamate
- primary amine
- secondary amine
- tertiary amine
- quat ammonium
- amine
- aniline
- nitrile
- imine
- oxime
- nitro
- nitroso
- azide
- isocyanate
- hydroxamic acid
- hydroxamate
- alkyl chloride
- alkyl bromide
- alkyl iodide
- aryl chloride
- aryl bromide
- aryl iodide
- boronic acid aromatic
- boronic ester aromatic
- boronic acid aliphatic
- boronic ester aliphatic
- boronic acid vinylic
- boronic ester vinylic
- boronic acid
- sulfonyl chloride
- sulfonyl bromide
- vinyl chloride
- vinyl bromide
- vinyl iodide
- alkene
- ketone O
- formyl
- alcohol
- chloride
- bromide
- fluoride
- iodide
- silicon
- primary amine neutral
- secondary amine neutral
- tertiary amine neutral
- alpha fluoroketone
- alpha chloroketone
- epoxide
- aziridine
- beta-lactam
- primary alcohol
- disulfide
- azo
- isothiocyanate
- hydrazine
- ketene
- peroxide
- silyl fluoride
- silyl bromide
- silyl chloride
- silyl iodide
- thiocarbonyl
- thioester
- betaKeto

## Figures and Tables

Table S1: Dataset sizes for 5 CYP P450 isoforms

	1A2	2C19	2C9	2D6	3A4
Before Cleaning Data Size	10072	10769	10050	10851	11436
After Cleaning Data Size	9773	10636	9935	10717	11401
# Actives	3598	4564	2603	1406	3602
# Inactives	6175	6072	7332	9311	7799

## Protein structures (PDB IDs)

CYP1A2: 2HI4, CYP2C9: 1R9O, CYP2C19: 4GQS, CYP2D6: 3QM4, CYP3A4: 3NXU

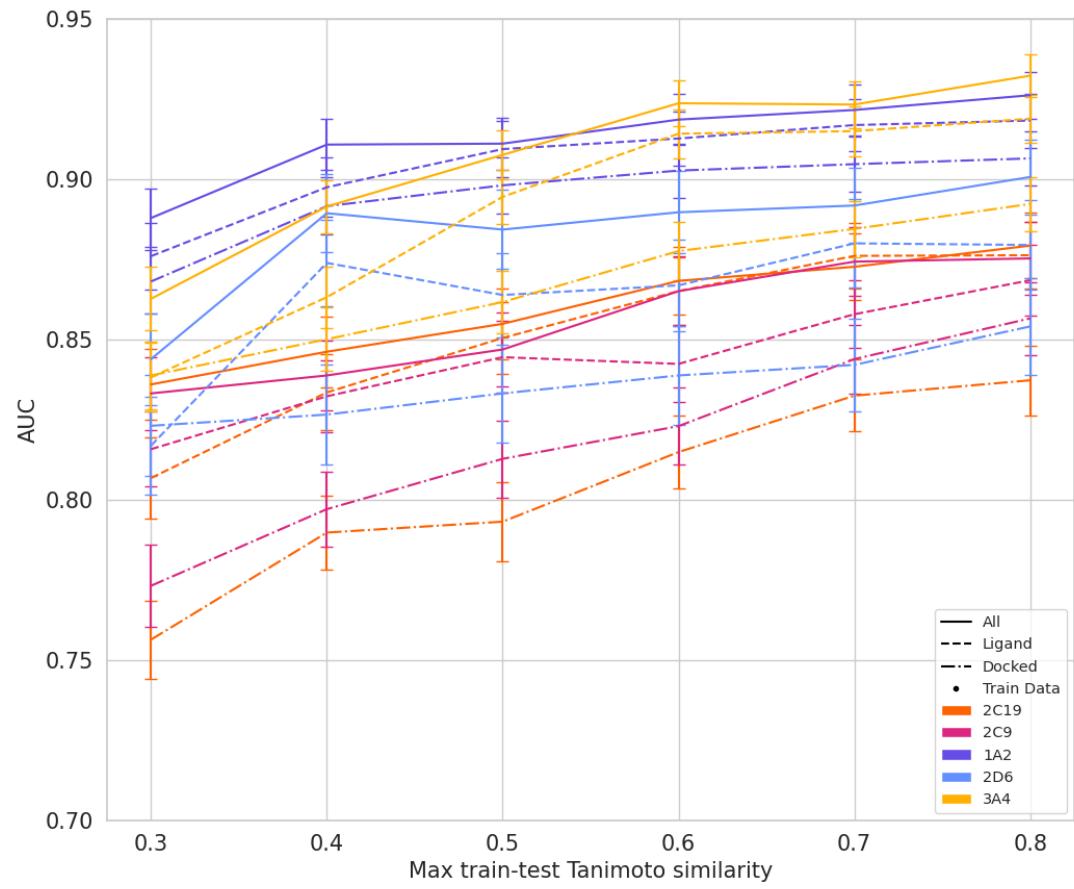

Figure S1: AUC of ML augmented docking using ligand only features, docking features, and all features over max train-test Tanimoto similarity

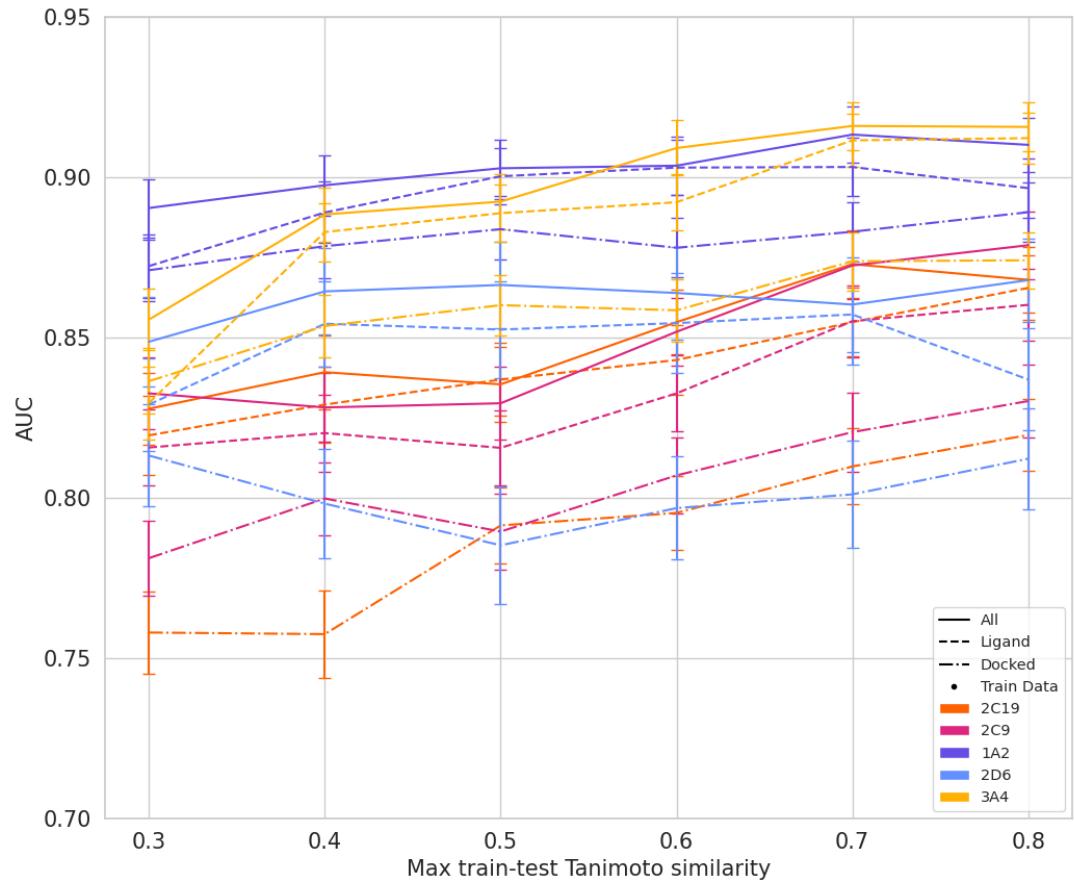

Figure S2: AUC of ML augmented docking using ligand-only features, docking features, and all features over max train-test Tanimoto similarity using same data sizes. Data size capped at data size of 0.3. Data size used; 1A2: 2406, 2C9: 2622, 2C19: 2698, 2D6: 2789, 3A4: 2649. Using all features become more predictive than ligand featurization at low Tanimoto similarity

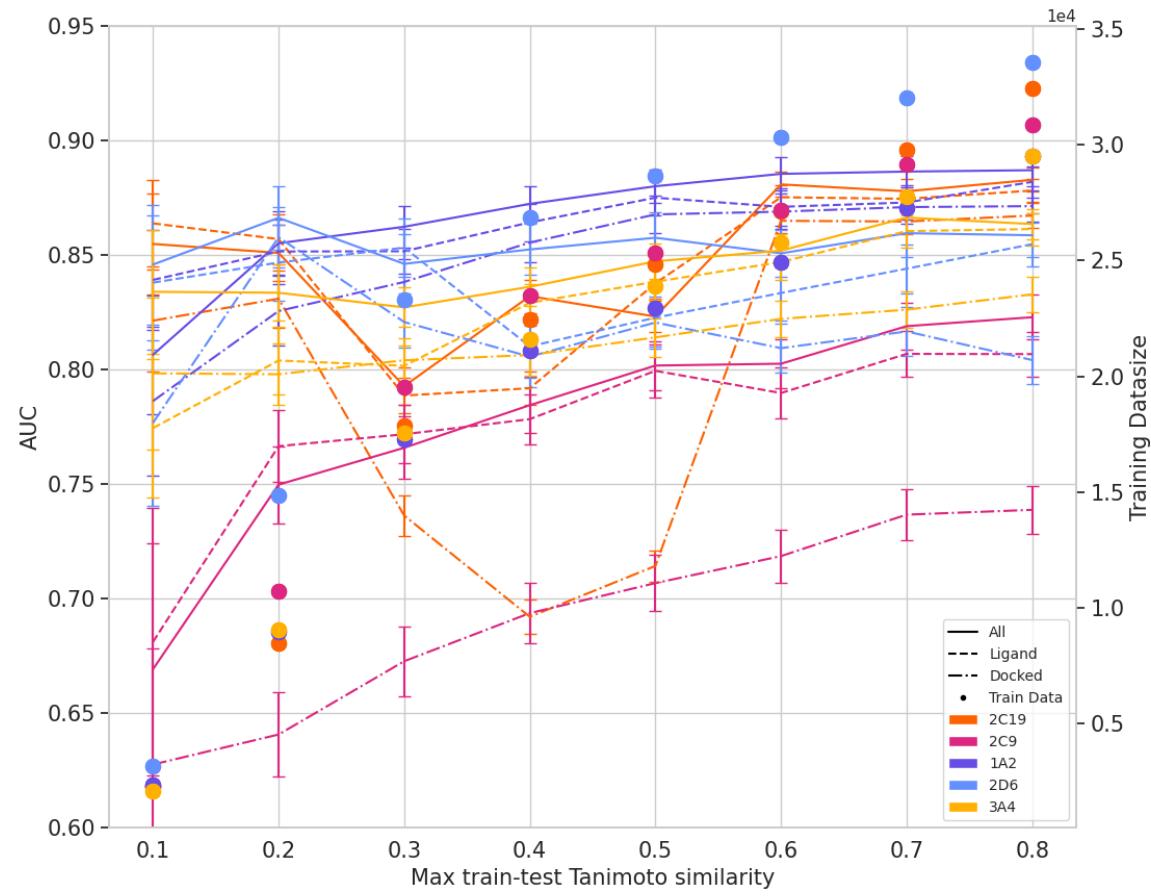

Figure S3: AUC of ML augmented docking using ligand only features, docking features, and all features over max train-test Tanimoto similarity using analog datasets

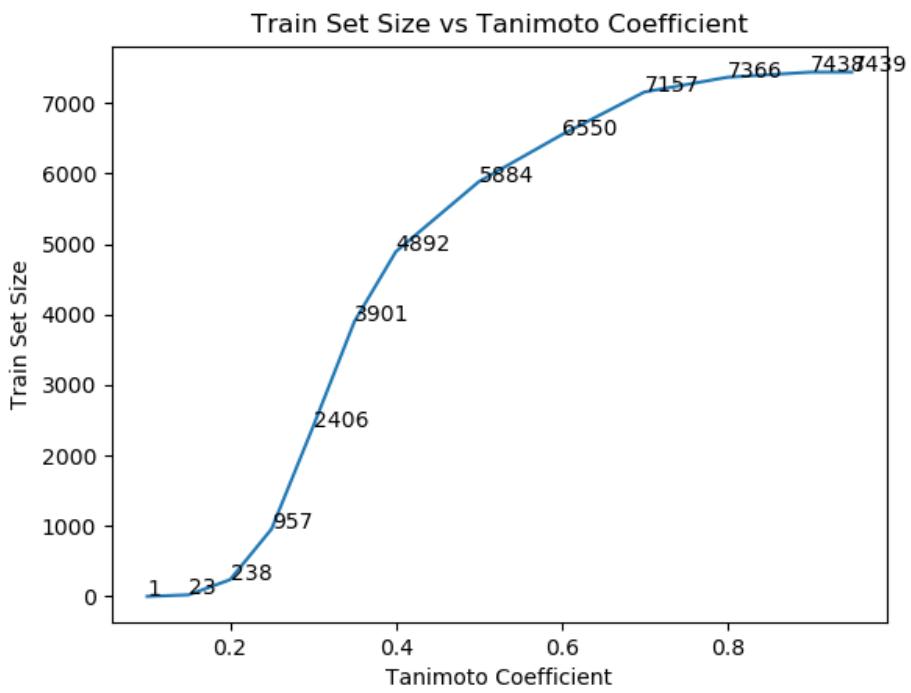

Figure S4: 1A2 CYP inhibition data set size after filtering by max similarity between test and train set using a test set of 100 clusters of 5 molecules.

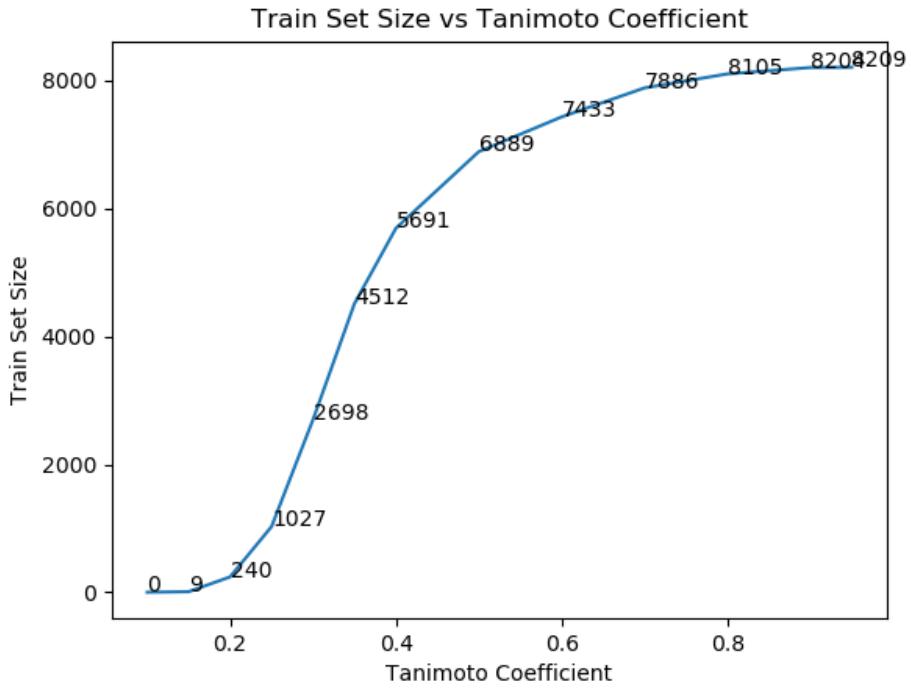

Figure S5: 2C19 CYP inhibition data set size after filtering by max similarity between test and train set using a test set of 100 clusters of 5 molecules.

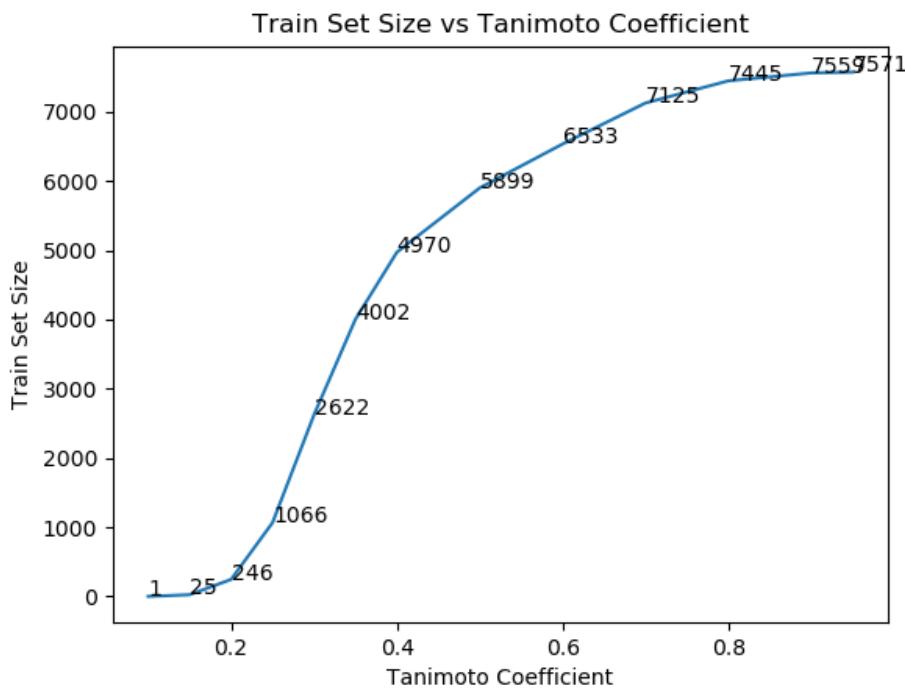

Figure S6: 2C9 CYP inhibition data set size after filtering by max similarity between test and train set using a test set of 100 clusters of 5 molecules.

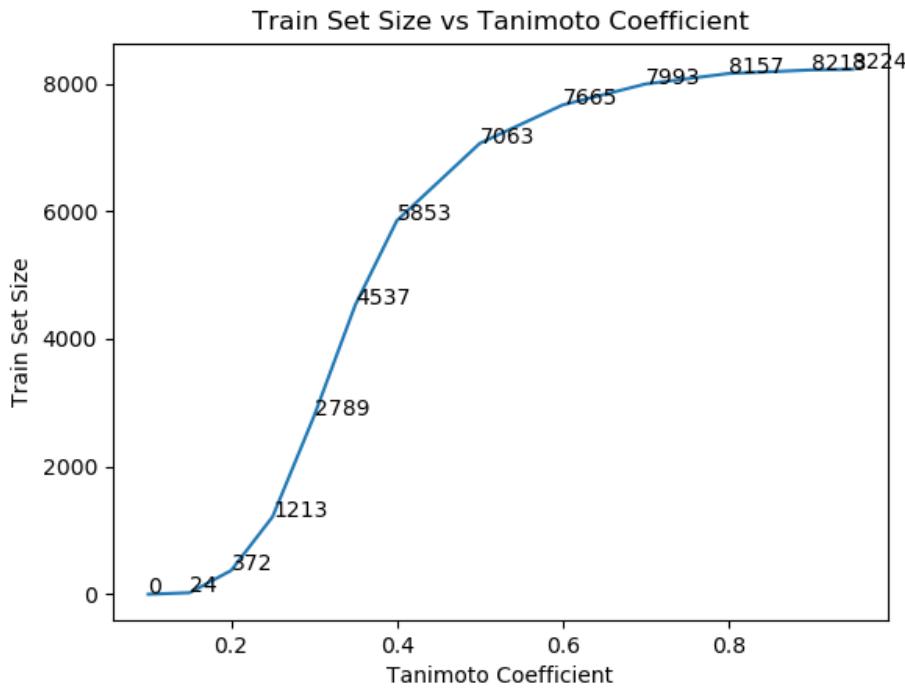

Figure S7: 2D6 CYP inhibition data set size after filtering by max similarity between test and train set using a test set of 100 clusters of 5 molecules.

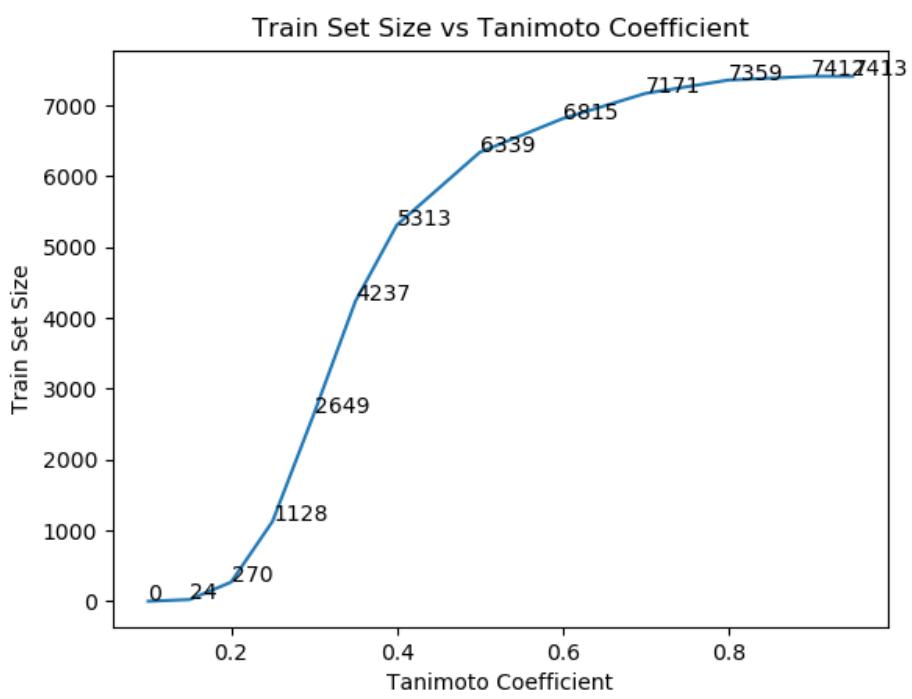

Figure S8: 3A4 CYP inhibition data set size after filtering by max similarity between test and train set using a test set of 100 clusters of 5 molecules.

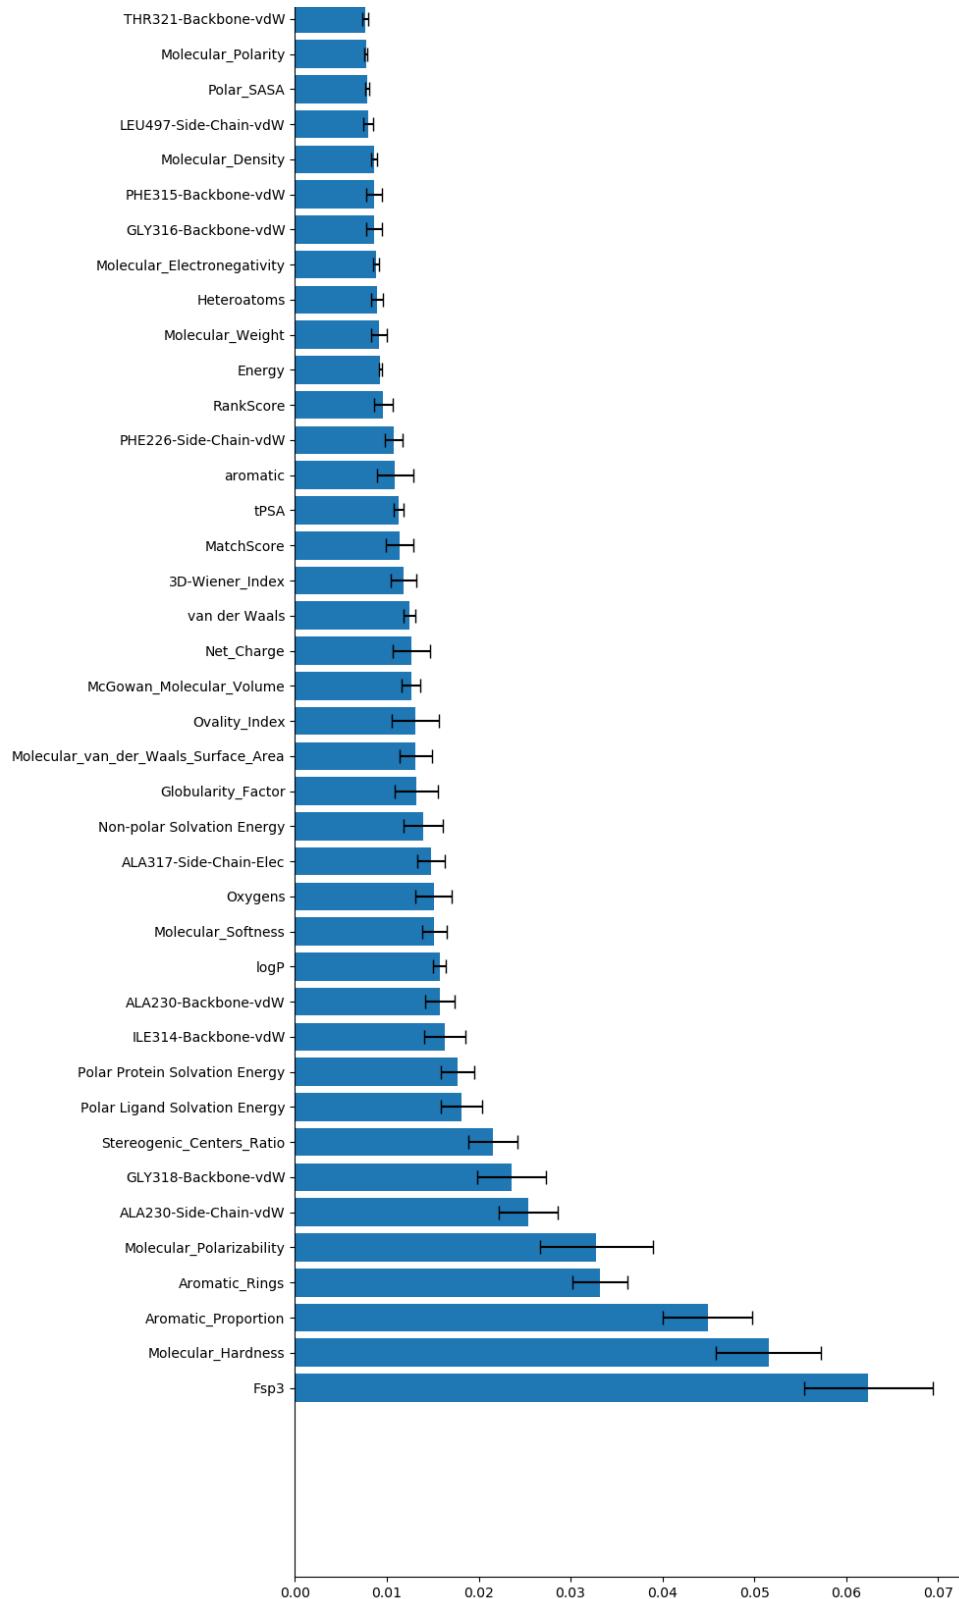

Figure S9: Feature importance of random forest model using selected top 100 features for isoform 1A2.

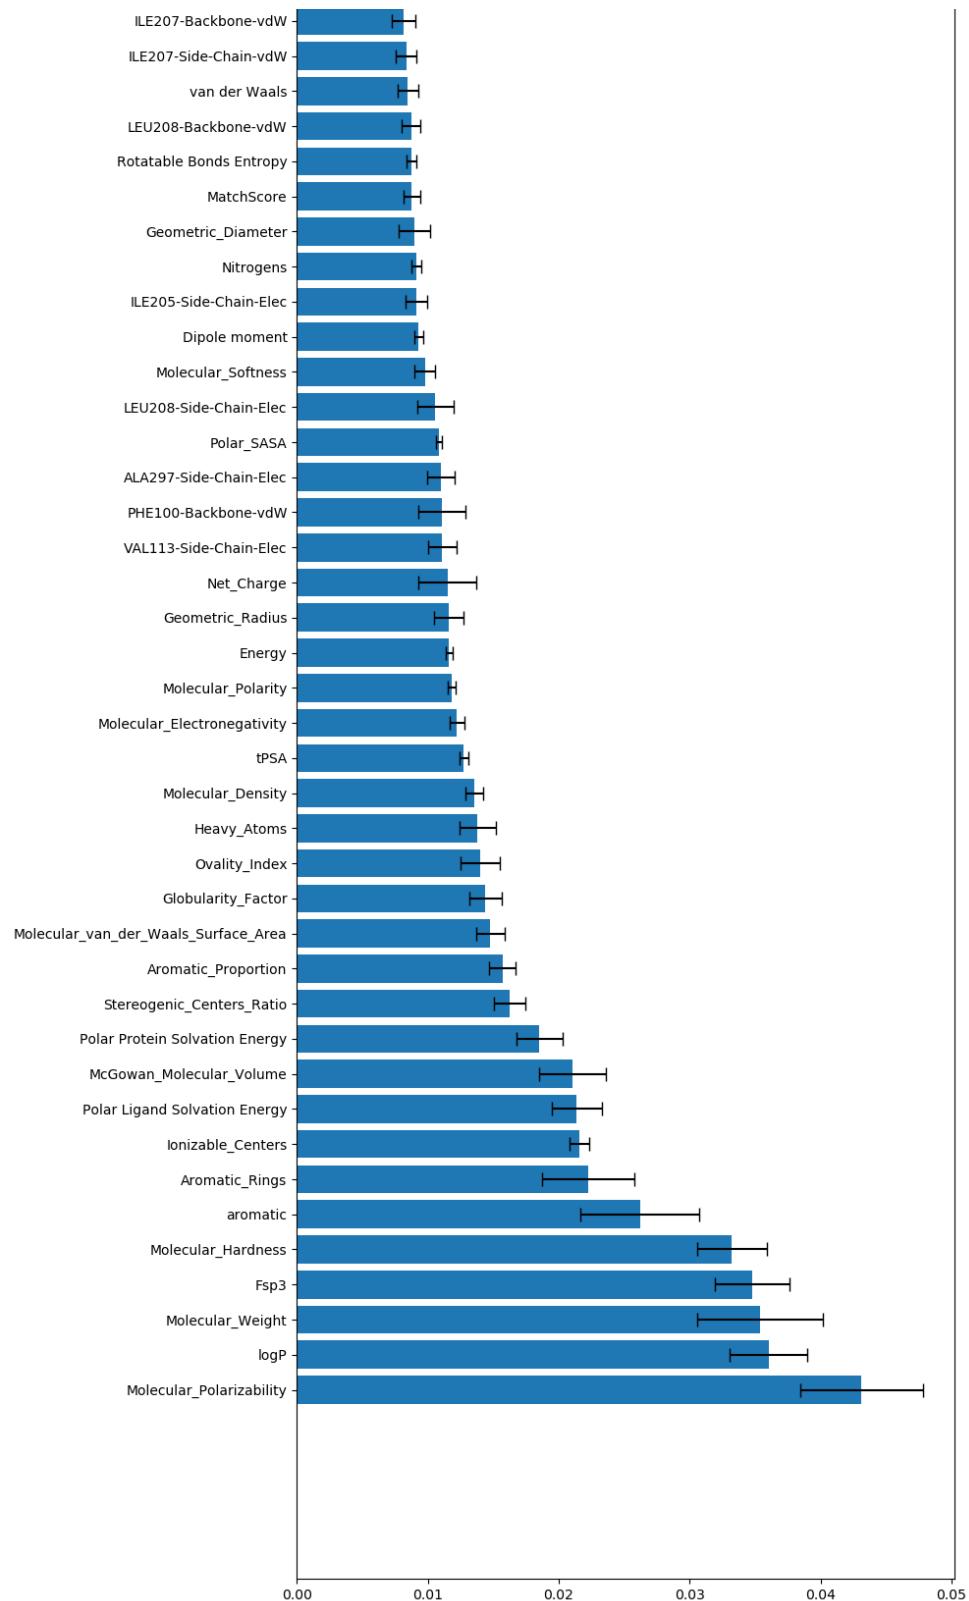

Figure S10: Feature importance of random forest model using selected top 100 features for isoform 2C9.

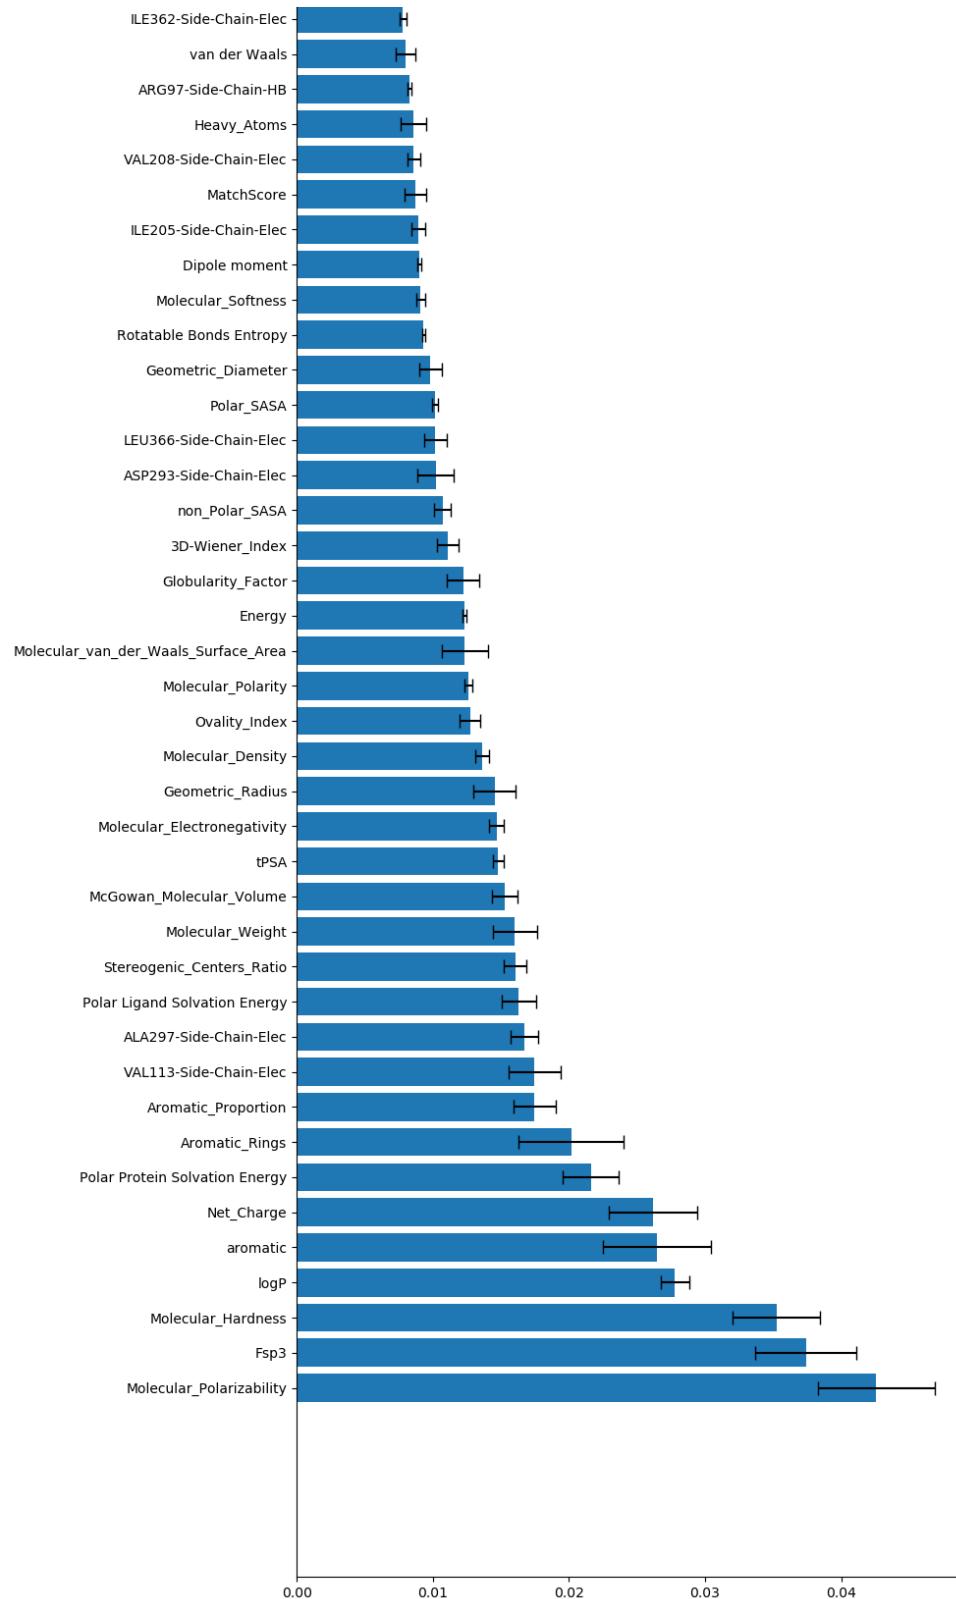

Figure S11: Feature importance of random forest model using selected top 100 features for isoform 2C19.

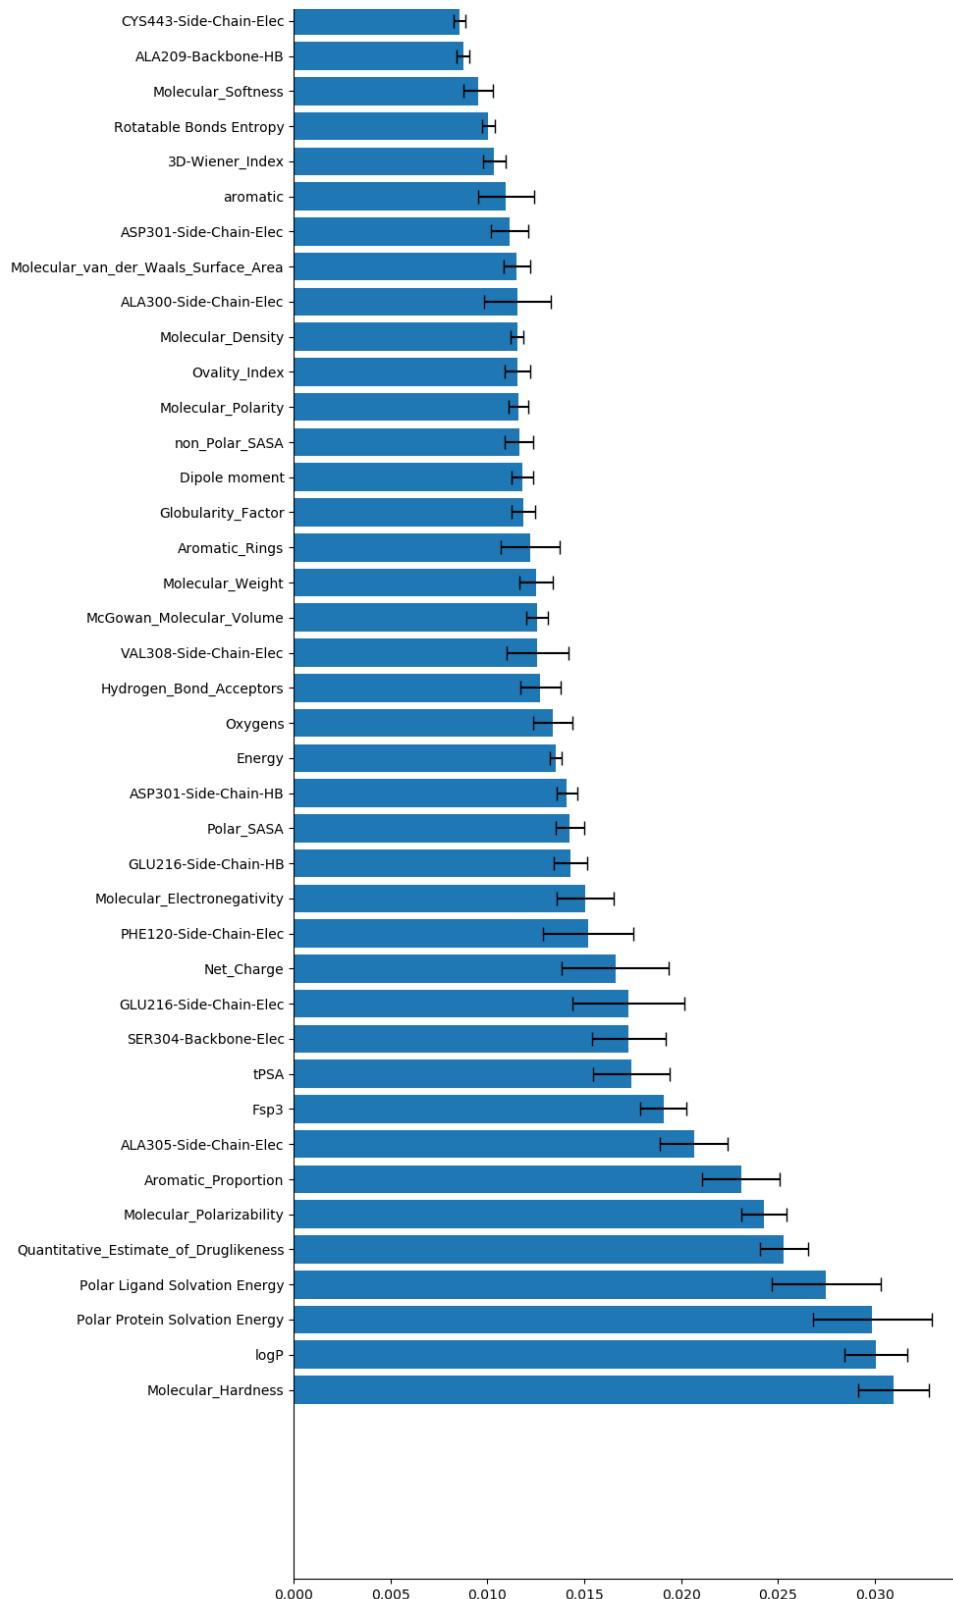

Figure S12: Feature importance of random forest model using selected top 100 features for isoform 2D6.

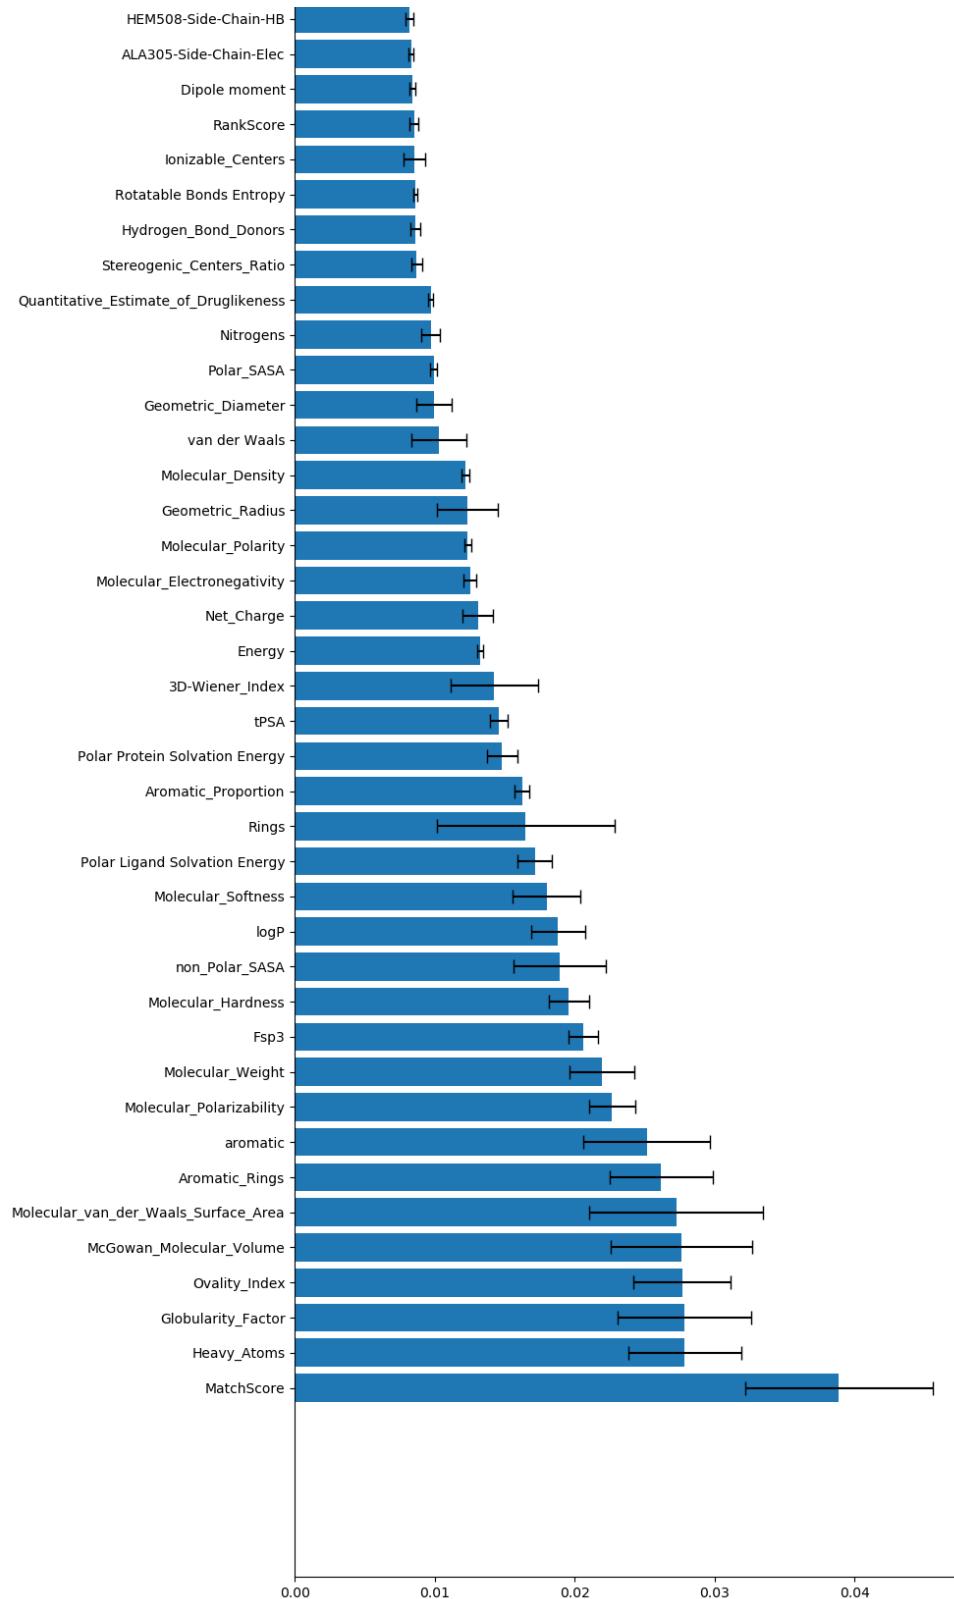

Figure S13: Feature importance of random forest model using selected top 100 features for isoform 3A4.

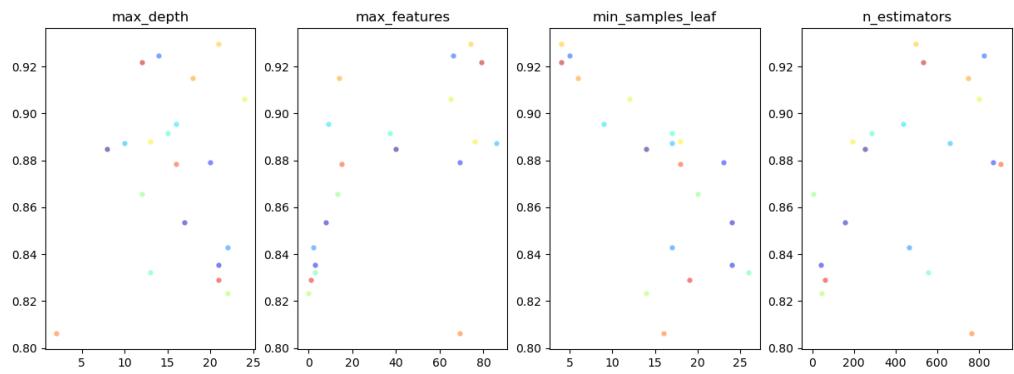

Figure S14: Example of hyperparameter tuning using hyperopt TPE for random forest.

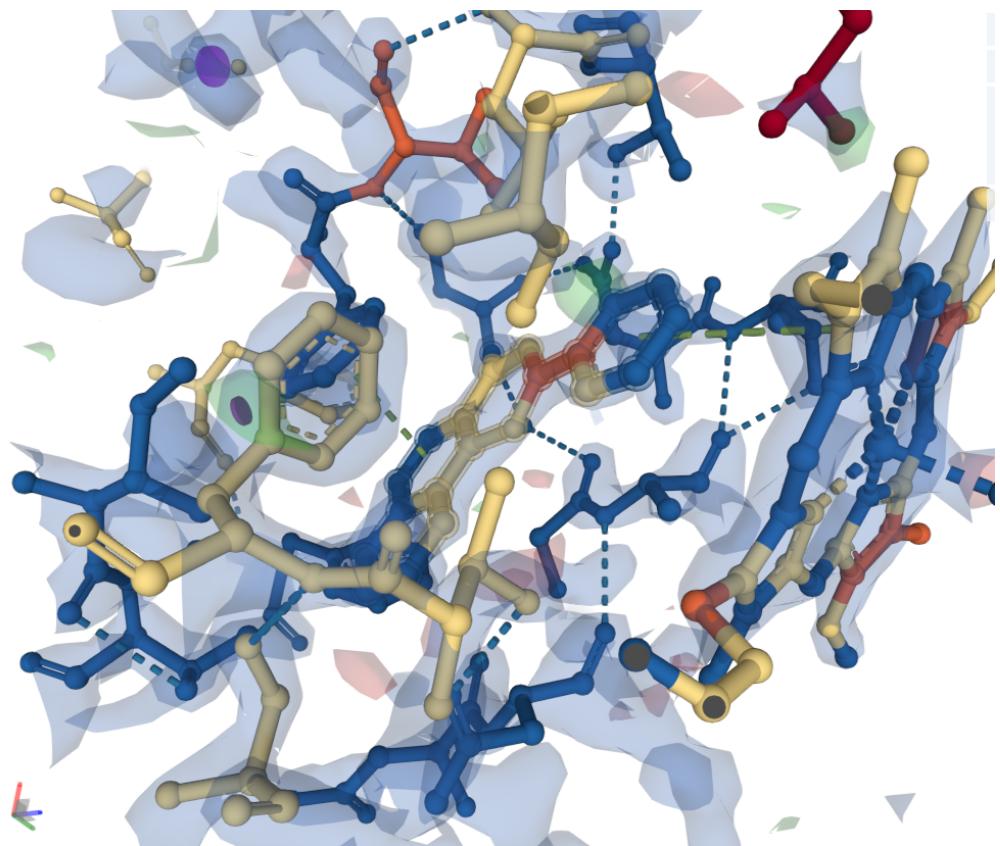

Figure S15: 2HI4: <https://www.rcsb.org/3d-view/2HI4?preset=electronDensityMaps>
