S2. Single-crystal X-ray crystallography

A suitable crystal was mounted on a glass fibre with Fomblin oil and collected at 150(2) K. The structure was solved using Olex2¹ and the ShelXT² structure solution program using Direct Methods and refined with the ShelXL³ refinement package using Least Squares refinement.

S3. Spectroscopy

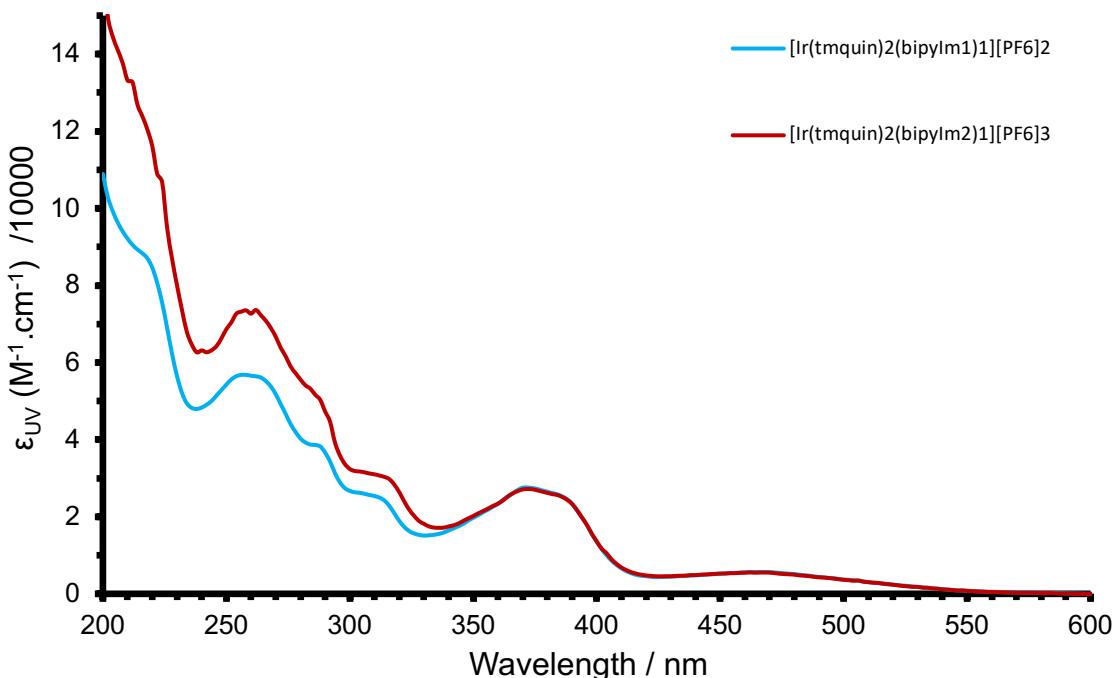

Figure S38. Absorption spectra for the polycationic iridium complexes (293 K, aerated MeCN, 10^{-5} M).

S4. Cyclic Voltammetry

Cyclic voltammetry was performed using a PalmSens4 potentiostat. Experiments were performed using HPLC grade MeCN with an analyte concentration of 1 mM at 293 K, using triply recrystallised $[^n\text{Bu}_4\text{N}][\text{PF}_6]$ as the supporting electrolyte at 0.25 M concentration. A three-electrode setup was used, consisting of a platinum disc working electrode, a platinum wire counter-electrode and a silver wire pseudo-reference. Solutions were sparged for 10 minutes with MeCN saturated stream of nitrogen gas. Voltammograms were referenced to the ferrocene/ferrocenium redox couple measured using the same conditions.

Table S6. Electrode oxidation potentials of the family of homo- and heterometallic complexes (mV shifts presented in parentheses)

Complex	Ox
$[\text{Ir}(\text{Me}_3\text{quinox})_2(\text{bipy-Im1})][\text{PF}_6]_2$	0.98 (100)
$[\text{Ir}(\text{Me}_3\text{quinox})_2(\text{bipy-Im2})][\text{PF}_6]_3$	0.99 (110)
$[\text{Ir-Au}][\text{PF}_6]_2$	1.01 (110)
$[\text{Ir-Au}_2][\text{PF}_6]_3$	1.04 (140)
$[\text{Ru-Au}][\text{PF}_6]_3$	0.93 (110)
$[\text{Ru-Au}_2][\text{PF}_6]_4$	0.94 (110)

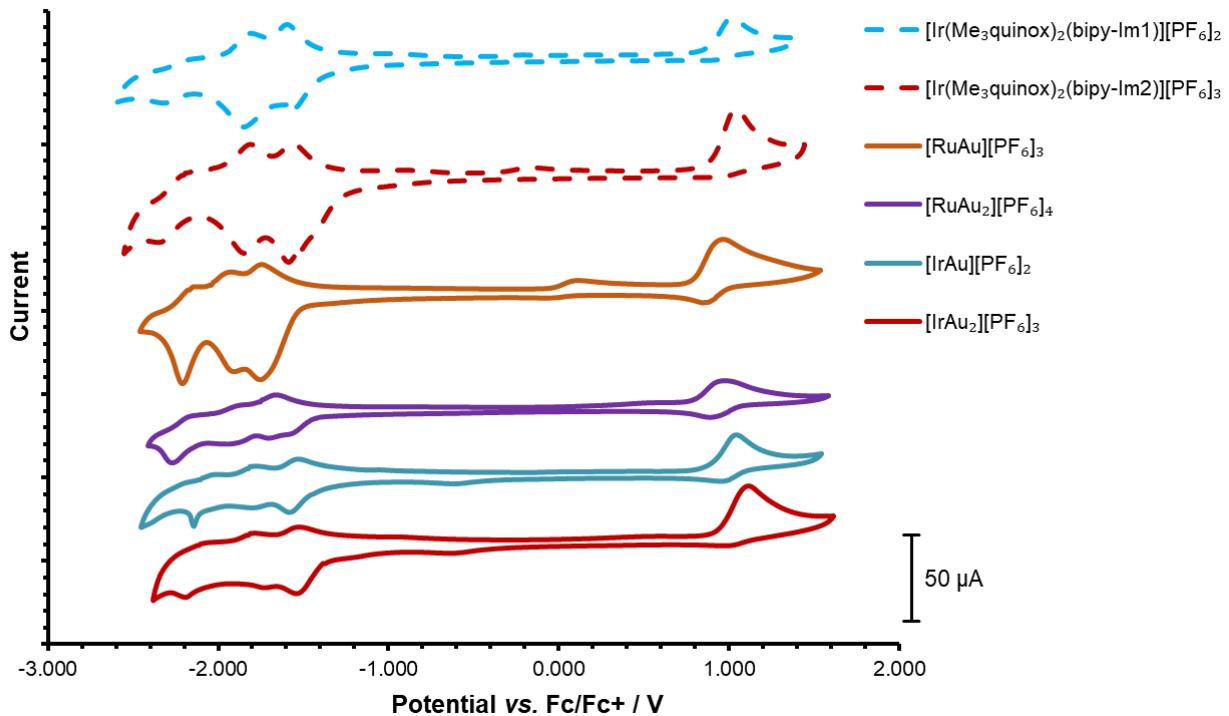

Figure S39. Cyclic voltammograms for the family of monometallic Ir/Ru heteropolymetallic Ir/Ru-Au complexes
